This course will introduce students to direct marketing practices with emphasis on data base marketing, strategic business planning, importance of the offer, selection and selling merchandise, business-to-business direct marketing, fund raising, mailing lists, print and electronic media, co-ops, telemarketing, production lead generation, direct marketing math, idea development, research and integrating direct marketing into the overall marketing mix. The course will be practical rather than theoretical in nature. Prereq: Concurrent or previous enrollment in ISC 311 and ISC 321; cannot be taken concurrently with ISC 461.

ISC 371 SPECIALIZED PUBLIC RELATIONS WRITING. (3)

Audience and purposes of writing are assessed as students develop a formal strategy to guide - and to evaluate - their writing. Strategic writing tasks include writing of position papers, speech writing, and writing for brochures, media releases, letters and newsletters. Societal impact and ethical considerations are examined across all writing tasks. Lecture, two hours; laboratory, two hours per week. Prereq: ISC 341.

ISC 399 INTERNSHIP: ISC. (1-3)

Qualified students enter the professional sector to refine skills and knowledge. Supervised internships approved by the School allow placements in industry, government, radio, television, print media, research agencies, etc. A signed contract must be completed prior to the start of the internship. Pass/fail only. Prereq: admission to upper-division, fulfillment of internship prerequisites for the major, and approval of internship director for the major. (Same as JAT 399.)

ISC 431 ADVERTISING CREATIVE STRATEGY AND EXECUTION II. (3)

Students refine their ability to meet strategic goals through creative message executions. Media options and their impact on message structure and preparation are explored more fully. Application is made of pertinent theoretical principles such as source credibility, selective exposure/perception, and learning theory. Presentation skills stressed. Portfolio preparation and review. Prereq: ISC 331.

ISC 441 CASE STUDIES IN PUBLIC RELATIONS. (3)

This course is designed to reinforce and expand the knowledge learned in the introductory public relations course, ISC 341. The course will provide students with an opportunity to apply public relations principles and approaches to institutional experiences. Emphasis will be placed on actual case studies, and students are expected to demonstrate a high level of proficiency in written and oral communication skills. Prereq: ISC 341.

ISC 451 INTEGRATED STRATEGIC MEDIA MANAGEMENT. (3)

An overview of the strategic use of media in integrated promotional campaigns is provided. Students acquire basic skills in quantitative and qualitative evaluation of media; choice of target audience, use of secondary research on products and audiences; development of media objectives, strategies and tactics; and the oral and written presentation of media plans. The basic structure of media organizations is discussed. Prereq: Concurrent or previous enrollment in ISC 311 and ISC 321; cannot be taken concurrently with ISC 351.

ISC 461 DIRECT RESPONSE MESSAGE STRATEGIES. (3)

Examines the purpose, range, social and economic impact, and techniques of direct response messages. Students review type and role of suppliers as well as legal considerations. Based on a strategic plan, students frame messages for print, broadcast, and computer-based media that guide and facilitate response from prime prospects. Examines methods to evaluate message effectiveness. Prereq: Concurrent or previous enrollment in ISC 311 and ISC 321; cannot be taken concurrently with ISC 361.

ISC 471 EVENT PLANNING. (3)

This course will introduce students to special event planning processes and strategies. Emphasis is on creating, organizing, and managing both physical and virtual events. Topics will include research and planning, attracting sponsors and exhibitors, using integrated strategic communication to generate publicity and awareness, and evaluating event effectiveness toward reaching client objectives. Prereq: Major status and senior standing.

ISC 489 TOPICAL STUDIES IN MASS MEDIA PROFESSIONS (Subtitle required). (1)

Each course module offers advanced, pinpoint study of a topic central to the mass media professions. Depending on the topic, the course format may include lectures, seminars, and/or studio work. May be repeated to a maximum of three credits when identified by different subtitles. Prereq: Variable, given when topic is identified.

***ISC 491 INTEGRATED STRATEGIC COMMUNICATION CAMPAIGNS CAPSTONE. (3)**

An advanced senior capstone course in which students unify strategies and tactics by applying knowledge and skills developed in their research, creative, account management, public relations, and/or direct response and major elective courses. The format for this synthesis requires students to establish strategy, develop, execute, and present a multichannel integrated campaign. Student teams compete for client approval on national, regional, or local accounts. Prereq: Completion of Major Path and Senior Standing.

ISC 497 SPECIAL TOPICS IN ISC (Subtitle required). (3)

This course will focus on selected topics of industry practice associated with the integrated fields of strategic communication. Title assigned each time the course is offered. May be repeated with different subtitles to a maximum of six credits. Prereq: Variable, given when topic is identified.

ISC 541 CRITICAL TOPICS IN INTEGRATED STRATEGIC COMMUNICATION (Subtitle required). (3)

Students will use psychological or sociological perspectives to analyze one or more important aspects of the interaction between integrated strategic communication and society. Topics that may be considered include behavioral, political, economic, and/or international issues. The course may be repeated to a maximum of six credits when identified by different subtitles. Prereq: Senior or graduate standing; ISC 161.

ISC 543 REGULATION OF STRATEGIC COMMUNICATION. (3)

Course examines regulation of strategic, persuasive communication by federal, state, and local agencies as well as self regulation. Privacy, copyright, and deception are among featured issues. Prereq: Major standing.

ITA Italian

ITA 011 ITALIAN FOR READING. (3)

Designed to meet the needs of upper division and graduate students who are preparing for the graduate reading examination or who need reading knowledge of Italian in their minor.

ITA 101 ELEMENTARY ITALIAN. (4)

Fundamentals of Italian with development of the four basic skills: listening, speaking, reading, writing.

ITA 102 ELEMENTARY ITALIAN. (4)

A continuation of ITA 101. Prereq: ITA 101, or one year of high school Italian, or its equivalent.

ITA 201 INTERMEDIATE ITALIAN. (3)

A continuation of ITA 102 and an introduction to readings of selected Italian works. Further development of listening, speaking, reading and writing. Prereq: ITA 102.

ITA 202 INTERMEDIATE ITALIAN. (3)

Review of grammar and further development of speaking, oral comprehension, writing and reading based on cultural and literary materials. Prereq: ITA 201.

ITA 263 STUDIES IN ITALIAN CULTURE (Subtitle required). (3)

A study of Italian culture through representative writers, directors and artists in their political and socio-economic context. Taught in English. Subtitle required. May be repeated once with a different subtitle.

ITA 295 ITALIAN CONVERSATION AND COMPOSITION. (3)

Italian conversation and composition. Prereq: ITA 202 or equivalent.

ITA 300 ITALIAN CONVERSATION AND WRITING. (3)

This course is mainly designed to help students improve their speaking, pronunciation and listening comprehension ability in the Italian language, along with their writing and reading skills. Prereq: ITA 202 or equivalent.

ITA 301 ITALY FROM FASCISM TO THE PRESENT. (3)

This course is designed to give students a comprehensive overview and a good understanding of contemporary Italy. Through group activities, oral presentations and written assignments based on various literary excerpts, movies, and cultural readings, students will analyze and reflect on the main historical events and characters, along with cultural and economic trends that shaped Italy in the 20th century, starting with the period of Fascism and WWII. Prereq: ITA 300 or consent of instructor.

ITA 335 TOPICS IN ITALIAN CINEMA (Subtitle required). (3)

This course introduces students to representative directors, genres and periods of the Italian cinema with a special focus on its interaction with various world cinemas. Taught in English. May be repeated once up to 6 credits with a different subtitle.

ITA 395 INDEPENDENT STUDIES IN ITALIAN. (3)

Directed study in Italian literature, culture or film. Student's topic to be approved by director. May be repeated once. Prereq: Successfully completed ITA 202 and consent of instructor.

ITA 410G SPECIAL TOPICS IN ITALIAN LANGUAGE (Subtitle required). (3)

Special Topics in Italian Language offers students the opportunity to develop advanced competencies in Italian language. Course focuses and developing students' linguistic proficiency in specific cultural content areas. Possible topics include business Italian, Italian stylistics, and Italian translation. May be repeated under different subtitle up to 9 credits. Prereq: 6 credits upper division ITA courses completed or instructor consent.

ITA 443G SURVEY OF ITALIAN LITERATURE I. (3)

A survey of Italian literature from its beginnings to the 17th century. Prereq: ITA 202.

JAT Journalism, Advertising, Telecommunications

JAT 241 COMMUNICATIONS PRACTICUM. (1-4)

Supervised laboratory work in the media of mass communications, with meetings for evaluation of work, study of techniques, analyses of problems, and reports. May be repeated to a maximum of four credits. (Offered in Community College System only.)

JAT 395 INDEPENDENT STUDY. (1-3)

Designed for advanced students with research or special study problems. Regular consultation with the instructor. May be repeated to a maximum of six credits. Enrollment normally limited to juniors and seniors with a 3.0 standing in the major. These requirements may be waived by the department in exceptional circumstances. Prereq: Consent of instructor.

JAT 399 INTERNSHIP: ISC. (1-3)

Qualified students enter the professional sector to refine skills and knowledge. Supervised internships approved by the School allow placements in industry, government, radio, television, print media, research agencies, etc. A signed contract must be completed prior to the start of the internship. Pass/fail only. Prereq: admission to upper-division, fulfillment of internship prerequisites for the major, and approval of internship director for the major. (Same as ISC 399.) This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

JOU Journalism

JOU 101 INTRODUCTION TO JOURNALISM. (3)

This course surveys the history and social theories of journalism and introduces students to contemporary journalistic practice. Students will learn about the function and operation of print, electronic and on-line news media. Issues and concepts to be covered include the relationship of government to media; press freedom and controls; media ethics, and the impact of global communications. The course also covers the relationship of journalism to advertising, public relations and telecommunications, particularly with regard to new technologies. Prereq: JOU pre-majors in primary window; all others in secondary window.

JOU 204 WRITING FOR THE MASS MEDIA. (3)

An introduction to the concepts and techniques of media writing. This course offers hands-on instruction in information gathering, organization, and writing for print, broadcast and on-line media. Lecture, one hour; laboratory, four hours per week. Prereq: JOU 101; JOU pre-major status; ISC pre-majors may enroll if they've completed ISC 161.

JOU 250 ETYMOLOGY. (3)

A study of words and their fundamental values with reference to development of a writing vocabulary. (Same as ENG 201.)

JOU 301 NEWS REPORTING. (3)

A course designed to develop skills in information gathering, news judgment, organization and writing. Students will learn to cover breaking news and write features. Lecture, two hours; laboratory, two hours per week. Prereq: JOU 204.

JOU 302 RADIO AND TV NEWS REPORTING. (3)

An introduction to principles of broadcast writing and reporting. Students will complete assignments in class and at WUKY-FM, where they will prepare segments for newscasts under

the supervision of the station's news director. Students also will learn to shoot and edit videotape and to prepare TV news reports. Lecture, two hours; laboratory, two hours per week. Prereq: JOU 204.

JOU 303 NEWS EDITING. (3)

Instruction and practice in copy desk operation and the duties and ethics of copy editors. Topics include techniques for editing stories, handling wire copy, writing headlines and news judgment. Emphasis on electronic editing. Lecture, one hour; laboratory, four hours per week. Prereq: JOU 204.

JOU 304 BROADCAST NEWS DECISION MAKING. (3)

This class is designed to sharpen students' news judgment and teach them the skills they will need to become assignment editors and producers of radio and television newscasts. Students will study the content and selection of news stories, using audio materials from such sources as National Public Radio, and visual materials from CNN Newsource. Lecture, two hours; laboratory, two hours per week. Prereq: JOU 302.

JOU 319 WORLD MEDIA SYSTEMS. (3)

A comparison of the communications media in different countries of the world and the theories used to justify them. How various political and social systems affect the media and how the media affect the societies in which they exist. Prereq: JOU 101 or ISC 161 or MAS 101 or TEL 101. (Same as ISC/MAS 319.)

JOU 330 WEB PUBLISHING AND DESIGN. (3)

This course is designed to teach students to code and display text and visual information effectively on the Internet and to understand the application of professional practices in Web site analytics and management. Visual communication theory and practice for photographs, illustrations, graphical and text elements will be taught and highlighted, in addition to the basics of HTML and CSS. Students will use industry-standard software and workflows as they are introduced to basic techniques and strategies for publishing, designing and managing a Web site for a newspaper, magazine, television station, advertising agency, public relations firm or media start-up. Social media and geolocation for news and other media purposes will be highlighted. Lecture: two hours, laboratory: two hours per week. Prereq: JOU major. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

JOU 387 PHOTOJOURNALISM I. (3)

A hands-on introduction to the use of cameras and laboratory equipment in contemporary news photography. Selected readings on photographic methods and the ethics of photojournalism. Lecture, two hours; laboratory, two hours per week.

JOU 403 TV NEWSCAST PRODUCING AND DIRECTING. (3)

This class is designed to train students to become television newscast producers and directors. Students will prepare TV newscasts with consideration of news story placement as it relates to audience, viewing trends, and journalistic judgment. Students will learn critical thinking skills in producing and directing as it relates to newscast and story promotion, reaching to major news events and their coverage, and talent and time management. Students will be required to write, produce and direct news stories in different formats for different formats for different newscasts and address ethical and legal concerns of news stories. Prereq: JOU 302 for JOU Majors; MAS 312 for MAS majors. (Same as MAS 403.)

JOU 404 ADVANCED TV NEWS. (3)

Students in this class produce a half-hour, TV newscast shown on a cable channel to homes in the Lexington-Fayette County DMA. Students will hone their writing skills and their proficiency in shooting and editing video, serving as producers, writers, videographers, reporters and anchors. May be repeated for up to six hours credit, with permission of instructor. Lecture, one hour per week; laboratory, four hours per week. Prereq: JOU 302.

JOU 409 MAGAZINE ARTICLE WRITING. (3)

An advanced writing course designed to teach students to generate, report and write feature stories for magazines and to market free-lance articles. Lecture, two hours; laboratory, two hours per week. Prereq: JOU 301.

JOU 410 PUBLICATIONS PRODUCTION. (3)

Study of theory and practice in the techniques of effective communication through print and/or the Web. Starting with typography, this course will cover design for newsletters, newspapers and news magazines, but other publications may be considered. Instruction in the processes of defining the purpose of, designing and producing a publication. These include: planning, design, article and photo selection, page layout, headline and title writing. Lecture, two hours; laboratory, two hours per week. Prereq: JOU 301 and 303.

JOU 415 DESIGN AND LAYOUT: (Subtitle Required). (1)

This course will familiarize students with computer programs used in publication design. Students develop their skills through hands-on exercises and projects. May be repeated to a maximum of three credits under different subtitles. Prereq: Will be determined by topic of course.

JOU 430 MEDIA MANAGEMENT AND ENTREPRENEURSHIP. (3)

An introduction to news media management focusing on start-up, design and operation of newspapers and magazines. This course takes an intensive look at the editorial content, advertising, business and management side of journalism. Lecture, two hours per week; laboratory, two hours per week.

Course Descriptions

JOU 455 MASS MEDIA AND DIVERSITY: (Subtitle Required). (3)

This course will examine gender and minority issues in the media. The course offers a critical framework for analysis of socio-cultural issues pertaining to women, ethnic groups, disabled persons, and others, and of their presentation in the media. May be repeated to a total of nine hours under different subtitles.

JOU 460 JOURNALISM IN SECONDARY EDUCATION. (3)

A course designed to familiarize students with a variety of legal and ethical issues facing student journalists and media advisers in secondary schools. Prereq: JOU 301 or JOU 302.

JOU 485 COMMUNITY JOURNALISM. (3)

A study of all aspects of community news media, including editorial and business operations, and the conflicts that can arise between them, as well as the personal-professional conflicts that community journalists must manage to be successful in the field. Lecture, two hours; laboratory, two hours of independent, advanced reporting and writing, for online and possible print publication. May also include photography and broadcast journalism. Prereq: JOU 301 or JOU 302.

JOU 487 PHOTOJOURNALISM II. (3)

An in-depth study of the many facets of photojournalism from the photo editor's perspective. Students will shoot assignments and will also probe the legal and ethical aspects of news photography. Lecture, one hour; laboratory, four hours per week. Prereq: JOU 387.

JOU 497 SPECIAL TOPICS IN JOURNALISM: (Subtitle required). (1-3)

Course will focus on selected topics drawn from journalism and related fields. Title assigned each time course is offered. May be repeated with different subtitles to a maximum of six credits.

JOU 498 MULTIMEDIA STORYTELLING. (3)

A course designed to provide journalism majors advanced training in reporting and writing articles on current events, public issues, personalities, culture and entertainment on multiple publishing platforms. Students will cultivate a platform-agnostic view of publication as they maintain a daily multimedia news outlet. Lecture, two hours; laboratory, two hours per week. Prereq: Print/multimedia students: JOU 301 and JOU 303; JOU 330. Broadcast/multimedia students: JOU 302 and JOU 304; JOU 330.

JOU 499 ADVANCED WRITING FOR THE MASS MEDIA: (Subtitle Required). (3)

A course designed to provide journalism majors advanced training in reporting and writing articles on current events, public issues, personalities, culture and entertainment for the print and electronic media. Areas of emphasis will vary each semester. These include reporting on business, the arts, government and sports. May be repeated to a total of nine credits with different subtitles. Lecture, two hours; laboratory, two hours per week. Prereq: JOU 301 or JOU 302.

JOU 531 MEDIA LAW. (3)

A study of the legal issues facing the news media. The course will focus on the rights, constraints and responsibilities under the U.S. Constitution, federal and state statutes, administrative law and common law. Specific topics include prior restraint, libel, privacy, student media, copyright, broadcast regulation, the court systems, commercial speech and access to courts and public records.

JOU 532 ETHICS OF JOURNALISM AND MASS COMMUNICATION. (3)

An examination of ethical challenges facing journalists on different platforms—print, online, broadcast and in social media. Students will reason through issues of value that arise in the practice of journalism.

JOU 535 HISTORY OF JOURNALISM. (3)

A study of the development of American journalism, with emphasis on the evolution of newspapers and electronic news media. Examination of principles and social theory underlying the practice of journalism.

JOU 541 THE FIRST AMENDMENT, INTERNET, AND SOCIETY. (3)

The course will focus on the legal and policy environment of the Internet. Particular attention will be paid to social media, libel, privacy, hate speech, obscenity, and copyright issues. How the First Amendment has been adapted to new media technology is a central part of the class. The course also provides an introduction to the legal system and the basics of legal research. Prereq: JOU 541 will be restricted to JOU majors in primary window; open to other majors in the School in secondary window; open to other students during add/drop.

JPN Japan Studies

JPN 101 BEGINNING JAPANESE I. (4)

A course in first semester Japanese language.

JPN 102 BEGINNING JAPANESE II. (4)

A course in second semester Japanese language. Prereq: JPN 101 or equivalent.

JPN 201 INTERMEDIATE JAPANESE I. (4)

A course in third semester Japanese language. Prereq: JPN 102 or equivalent.

JPN 202 INTERMEDIATE JAPANESE II. (4)

A course in fourth semester Japanese language. Prereq: JPN 201 or equivalent.

JPN 283 JAPANESE FILM. (3)

Study of Japanese films as an expression of Japanese culture. Viewing of films outside of class required.

JPN 301 ADVANCED JAPANESE I. (3)

This course is primarily a course in contemporary Japanese culture, but serves as a third year language course. The "texts" will consist of contemporary written materials (books, magazines, newspapers) and visual materials (tv programs, movies) and will exercise the four skills (reading, writing, listening, speaking) studied in the first four semesters of the language. By building on the skills learned in the initial semesters, this course will continue and strengthen the oral and aural, written and reading skills in Japanese, for students who have studied the equivalent of two years of Japanese language. Further, this course will emphasize the speaking and listening skills. It is paired with JPN 302, a course emphasizing reading and writing skills. Thus, students who complete this course will be able to communicate at a rather sophisticated level of Japanese on a variety of contemporary topics within Japanese society. Prereq: JPN 202 or permission of instructor.

JPN 302 ADVANCED JAPANESE II. (3)

This course is primarily a course in contemporary Japanese culture, but serves as a third year language course. The "texts" will consist of contemporary written materials (books, magazines, newspapers) and visual materials (tv programs, movies) and will exercise the four skills (reading, writing, listening, speaking) studied in the first four semesters of the language. By building on the skills learned in the initial semesters, this course will continue and strengthen the oral and aural, written and reading skills in Japanese, for students who have studied the equivalent of two years of Japanese language. Further, this course will emphasize the reading and writing skills. It is paired with JPN 301, a course emphasizing speaking and listening skills. Thus, students who complete this course will be able to communicate at a rather sophisticated level of Japanese on a variety of contemporary topics within Japanese society, and will be comfortable within Japanese print media. Prereq: JPN 301.

JPN 320 INTRODUCTION TO JAPANESE CULTURE, PRE-MODERN TO 1868. (3)

This course, taught in English, is designed as a general introduction to the culture of pre-modern Japan (up to the Meiji Restoration of 1868). Topics include: Shinto, Buddhism, and Confucianism in ancient Japan; feminine sensibilities in ancient literature; canons of medieval art; the culture of military strife; Christianity in pre-modern Japan; and encounters with the West.

JPN 321 INTRODUCTION TO JAPANESE CULTURE, MEIJI (1868) TO PRESENT. (3)

General introduction to Japanese culture from Meiji Restoration (1868) to the present. Topics include: nation-building, Japan and the West, Japan and Asia (for the Meiji period 1868-1912); gender construction and class formation, urbanization and mass culture (for the Taisho period 1912-1926); and Japanese colonialism, WWII, A-bomb, the U.S. occupation, postwar recovery, popular culture, and globalization (for the Showa period 1926-1989 and beyond). (Same as ANT 321.)

JPN 334 ENVIRONMENT, SOCIETY AND ECONOMY OF JAPAN. (3)

This course examines some of the major aspects of the society, culture, and economy of Japan. It discusses Japan's human and natural environments; natural hazards and disasters; cultural history and geography; economic and technological developments, their prospects and potentials; challenges to the management of environment and its resources; and Japan's role in global economy. (Same as GEO 334.)

JPN 351 THE JAPANESE EXPERIENCE OF THE TWENTIETH CENTURY. (3)

General introduction to Japanese culture from Meiji Restoration (1868) to the present, focusing mainly on the literary arts, but also including film, architecture and the fine arts.

JPN 395 INDEPENDENT WORK IN JAPANESE. (1-6)

Independent work to pursue special problems in reading and research. May be repeated to a maximum of six credits. Prereq: Instructor approval.

JPN 400G TOPICS IN JAPAN STUDIES (Subtitle required). (3)

Variable in content, this course focuses on important texts and issues in Japanese history, religion, literature, and philosophy. May be repeated to a maximum of six credits under different subtitles. To be taught in English.

JPN 401 ADVANCED JAPANESE III. (3)

This course will further develop skills in sophisticated Japanese language use by exercising the four skills of language (reading, writing, listening, speaking). The course will include readings in authentic materials in a wide variety of writing styles, student writing for a variety of occasions, and development of speaking and listening fluency. Prereq: JPN 302 or equivalent.

JPN 402 ADVANCED JAPANESE IV. (3)

This course will further develop skills in sophisticated Japanese language use by exercising the four skills of language (reading, writing, listening, speaking). The course will include readings in authentic materials in a wide variety of writing styles, student writing for a variety of occasions, and development of speaking and listening fluency. Prereq: JPN 401 or equivalent.

JPN 405 SEMINAR IN JAPANESE AND ASIAN STUDIES (Subtitle required). (3)

An interdisciplinary seminar focusing on a topic in Japanese and Asian Studies. May be repeated to a maximum of six credits. Prereq: Instructor approval.

JPN 410 ADVANCED TOPICS**IN JAPANESE LANGUAGE (Subtitle required). (3)**

JPN 410 is an advanced Japanese language course focused on topics related to Japan, such as contemporary Japanese writings, Japanese society, mass media, and business. The course develops students understanding of different genres of Japanese writing as well as developing advanced writing, listening and speaking skills. The course may be repeated up to four times under different subtitles. Prereq: JPN 302 or instructor's approval.

JPN 420G PRE-MODERN LITERARY AND VISUAL ARTS OF JAPAN. (3)

This course will introduce representative literary and visual arts of Japan, from antiquity until the mid-nineteenth century. This serves as an introduction to intellectual and societal undercurrents foundational to understanding Japanese society.

JPN 421G CONTEMPORARY LITERARY AND VISUAL ARTS OF JAPAN. (3)

This course will introduce the literary and visual arts of the last 150 years (since the Meiji period) of Japan. This serves as an introduction to intellectual questions that have enlivened Japanese society in the last century and a half, key to understanding contemporary Japanese culture.

JPN 430G SELF AND OTHER:**THE POLITICS OF CULTURE IN JAPAN-U.S. RELATIONSHIP. (3)**

This course explores changing images and ideas that America (the West) and Japan (the East) have had of one another during the modern century (roughly 1850s - 1980s) and in the more recent period of post-modernity (1990s - present) of their interactions. It examines the cultural politics of representations – images, ideas, and discourses – between Self and Other by viewing mutual constructions of “America” and “Japan” as its paradigmatic example.

JPN 461G JAPANESE COLONIALISM AND ITS LEGACIES. (3)

This course will explore the making and unmaking of Japanese colonialism and its postwar legacies via a number of media. Geopolitically, the course will be organized in terms of the changing boundaries, and their representations, of the Japanese empire. We will also incorporate the following related perspectives in order to examine some of the basic problems of Japanese colonialism which contemporary Japan has not completely left behind.

JPN 491G JAPANESE LANDSCAPES. (3)

A study of the landscapes of Japan as vivid portrayal of Japanese culture and their value system, including review and analysis of major primary and secondary components of the Japanese landscape. Prereq: JPN 334 or GEO 334 or consent of instructor. (Same as GEO 491G.)

JPN 520 JAPANESE LINGUISTICS AND SOCIETY. (3)

This course will introduce a wide range of topics in Japanese linguistics, including phonetics, phonology, morphology, syntax, semantics, and sociolinguistics. In this course, you will (1) learn the basic notions and terminology used in linguistics, (2) study major issues in Japanese linguistics, and (3) apply theoretical knowledge to the hands-on analysis of Japanese data. Prereq: JPN 102.

JPN 551 JAPANESE MULTINATIONAL CORPORATIONS. (3)

A study of the giant Japanese multinational corporations in the world economy and their impact on development and environment of selected countries. Topics include: geographical organization of multinational corporate system; their locational decisions; affect of multinationals policies on the environment; and local economy. Prereq: Consent of instructor. (Same as GEO 551.)

KHP Kinesiology and Health Promotion

KINESIOLOGY**KHP 100-KHP 135 SERVICE COURSES. (1)**

Instruction in a variety of motor skills activities. Courses are designed for students at a beginner level. Up to six hours credit may be earned in service courses; however, the same activity may not be repeated for credit.

KHP 136-KHP 144 ADVANCED SERVICE COURSES. (1)

Instruction in a variety of motor skills activities. The courses are designed for students who already possess intermediate skill in the activity. Instructors will assess skill at start of course. Up to six hours credit may be earned in service courses; however, the same activity may not be repeated for credit. Assignment of specific titles will occur internally in the department. Laboratory, three hours. Prereq: Completion of comparable service course or demonstrated competency.

KHP 152 TECHNIQUES OF SWIMMING. (1)

Acquisition of intermediate and advanced swimming skills. Includes techniques of teaching beginning and intermediate swimming and diving. Other topics include mechanical analysis of strokes, skin diving, survival swimming, basic first aid, rescue and safety in the aquatic environment. Laboratory, three hours per week. Prereq: Intermediate skill test first day of class and PHED, KINE majors only.

KHP 156 EDUCATIONAL GYMNASTICS. (1)

The primary goal of the course is to equip the student with the skills necessary to effectively

teach gymnastics and tumbling skills in the schools. Students will learn safety procedures, skill sequencing, and progressions that are recommended for students in pre-school through middle school. Students will learn to analyze skills and prepare appropriate lesson plans. Laboratory, six hours per week for one-half semester or three laboratory hours per week per semester. Prereq: Demonstrated competence and PHED, KINE majors only.

KHP 157 TRACK AND FIELD. (1)

Designed to familiarize the professional physical education student with the skills, practices, techniques, and theory of track and field. Development of at least an intermediate skill level is expected of the students. The primary goal of the course is to equip the student with the skills necessary to effectively teach track and field. Laboratory, three hours per week.

KHP 162 OUTDOOR EDUCATION THROUGH ACTIVITIES. (1)

An overview of outdoor educational skills and wilderness related activities for use by physical education majors in the school and/or recreational setting. Laboratory, two hours per week. Prereq: PHED and KINE majors only.

KHP 200 THE HISTORY AND PHILOSOPHY OF PHYSICAL EDUCATION AND SPORT. (3)

An introduction to the history and philosophy of physical education. An emphasis will be on: (1) the role of philosophy, educational philosophy, and the philosophy of physical education and (2) the major historical influences in the development of existing physical education programs in the United States.

#KHP 205 KINESIOLOGY FOR HEALTH AND PHYSICAL EDUCATION. (3)

This course is an examination of the structure and function of the major body systems, with emphasis on the muscular, skeletal, and cardiorespiratory systems role in human movement and physical activity.

KHP 210 INTRODUCTION TO FITNESS: (Subtitle required). (2)

Designed to familiarize the professional physical education student with the theory, techniques, and practices of physical fitness and conditioning. Understanding of the basic principles and an attainment of above average personal fitness status is expected of the students. The primary goal of the course is to equip students with knowledge and skill to design and carry out safe and meaningful physical conditioning programs. Prereq: PHED, KINE majors only.

***KHP 220 SEXUALITY EDUCATION. (2)**

This course is designed to prepare educators to teach sexuality education in the schools or other sexuality education forums. Information in this class will also be useful for students who plan to be parents. Emphasis is placed on justification of sexuality education, relevant content, appropriate teaching techniques, and precautions to take when teaching sexuality education.

***KHP 222 DRUG EDUCATION. (2)**

This course is designed to prepare educators to teach drug education in the schools or other drug education forums. Information in this class will also be useful for students who plan to be parents. Emphasis is placed on the prevalence of drug use by youth; physiological, psychological, and social effects of various drugs; effective and ineffective approaches to drug abuse prevention; appropriate teaching strategies; and evaluating drug curricula.

KHP 240 NUTRITION AND PHYSICAL FITNESS. (3)

Course focuses on the interrelationship between nutrition and physical fitness. The intent is to provide the student with the information necessary to formulate an individualized plan for the achievement and maintenance of adequate nutrition and physical fitness. Weight control will be discussed in this content. Team taught by nutrition faculty and health, physical education and recreation faculty. Lecture, two hours; laboratory, two hours.

KHP 250 TEAM SPORTS: (Subtitle required). (2)

This course is designed to familiarize the professional physical education student with the skills, practices, techniques, rules, and strategies of the sports of: soccer, volleyball, and team handball. The primary goal of the course is to equip the student with the skills necessary to effectively teach these three sports in both the upper elementary and secondary schools. Development of at least an intermediate skill level is expected of the students. Laboratory: Six hours per week for one semester. Prereq: KINE or PHED major.

KHP 252 WATER SAFETY LEADERSHIP. (2)

Leadership training in the teaching of swimming, lifesaving, diving, synchronized swimming, competitive swimming, camp waterfront, beach and pool operation and exhibition. Laboratory, four hours. Prereq: Current lifesaving certificate or equivalent.

KHP 260 INDIVIDUAL SPORTS: (Subtitle required). (2)

This course is designed to familiarize the professional physical education student with the skills, practices, techniques, rules, and strategies of the sports of: golf, tennis, and badminton. The primary goal of the course is to equip the student with the skills necessary to effectively teach these three sports in both the upper elementary, middle, and secondary schools. Development of at least an intermediate skill level is expected of the students. Laboratory: six hours per week for one semester. Prereq: KINE or HEPR major.

KHP 263 CURRICULUM DESIGN AND DEVELOPMENTAL SPORTS SKILLS IN THE ELEMENTARY SCHOOL. (3)

The study of sports skills development and their inclusion in the elementary programs of games of low organization, lead-up games, and refined sports skills. Lecture, two hours; laboratory, two hours per week. Prereq: KINE/HEPR/KHP majors or permission of the instructor.

Course Descriptions

#KHP 280 INTRODUCTION TO COACHING. (3)

This course is an introduction to the field of coaching. Students will be exposed to fundamentals of instruction, training principles, coaching philosophies, and sports sciences as they relate to coaching. Contemporary issues associated with coaching, such as youth sports, will be addressed.

KHP 300 PSYCHOLOGY AND SOCIOLOGY OF PHYSICAL EDUCATION AND SPORT. (3)

A survey course in the social science foundation of sport. Study of the sociological and psychological concepts which are relevant in understanding of sport in this country and the world. After the successful completion of this course, the student should be able to define, discuss, and identify the basic social and psychological factors which are related to the pursuit of movement through sport. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

KHP 319 SPORTS OFFICIATING. (1)

This course will provide students with introductory knowledge, interpretations skills, and mechanical techniques of officiating. Prereq: KHP major or permission of instructor.

KHP 340 ATHLETIC TRAINING. (2)

Consideration is given to the prevention, treatment and rehabilitation of injuries. Films and other visuals, visiting physicians and team trainers will be used to supplement instruction. The student will have an opportunity to gain practical experience. Lecture, one hour; laboratory, three hours.

KHP 344 PHYSICAL EDUCATION IN THE SECONDARY SCHOOL. (3)

Required for teacher certification in physical education. Theory and practice in methods of teaching physical education activities and supervising programs in the secondary school. Lecture, two hours; laboratory, two hours per week. Prereq: Admission to KHP Teacher Education Program.

KHP 360 PHYSICAL EDUCATION IN THE ELEMENTARY SCHOOL. (3)

An introduction to the necessary skills needed for the planning and conduct of modern elementary physical education programs. Emphasis is placed on teaching basic movement skills, fundamental rhythmic and sports skills. Lecture, two hours; laboratory, two hours per week. Prereq: Admission to KHP Teacher Education Program.

KHP 361 FIELD EXPERIENCES. (1)

Field experiences with elementary school age children, P-12. Prereq: Admission to the KHP Teacher Education Program.

KHP 369 STUDENT TEACHING IN PHYSICAL EDUCATION. (3-12)

For students who expect to teach and who meet the requirements for a major in physical education. Experience in working with children in physical education activities comprises basic part of course. Safety education also included. To be offered only on a pass-fail basis. Prereq: Admission to the Teacher Education Program or permission of instructor.

KHP 382 PHYSICAL EDUCATION FOR ELEMENTARY SCHOOL TEACHERS. (2)

This course is a hybrid course that does meet the first day of class. The syllabus provides information about access to student services and that is discussed during the face-to-face course orientation. Provides physical education concepts and content to be taught to the elementary students. Includes instructional methods and management techniques appropriate for physical education programs at the elementary school level. Prereq: Admission to elementary or early childhood teacher education program or consent of instructor.

KHP 390 DANCE ACTIVITIES FOR SCHOOLS. (2)

Designed to familiarize physical education preservice students with the skills, practices, techniques, theory of creative movement expression, and structured dance appropriate for K-12 physical education. State and national standards will be the foundation for the lesson plans developed in this course.

KHP 395 INDEPENDENT STUDY IN KINESIOLOGY AND HEALTH PROMOTION. (3)

May be repeated to a maximum of 12 credits. Prereq: Major and 3.0 standing in area or consent of instructor.

KHP 396 DANCE PEDAGOGY FOR MIDDLE AND HIGH SCHOOL. (3)

This is a comprehensive study of teaching methods and materials for teachers of middle and high school students. Prereq: KHP 390 and/or KHP 393.

KHP 415 BIOMECHANICS OF HUMAN MOVEMENT. (4)

The application of mechanical principles in the study of the internal and external forces acting on the human body and the effects produced by those forces. Prereq for Exercise Science majors: ANA 209, PGY 206, Math ACT of 23 or above (or Math placement test), or MA 109, or MA 110. Prereq for KINE Cert majors: KHP 205, Math ACT of 23 or above (or Math placement test), or MA 109, or MA 110.

KHP 420G PHYSIOLOGY OF EXERCISE. (3)

A study of the immediate and long-term effects of exercise on the human organism. The course will include topics such as the role of exercise in health related issues as well as physical training for fitness and sports performance. We will discuss current areas of research and controversies in exercise physiology. Prereq for KHP exercise science majors: ANA 209, PGY 206 or equivalent. Junior, senior or graduate standing. Prereq for KHP KINE-Cert teacher education

majors and HEPR-Cert teacher education majors: KHP 205 or equivalent. Junior, senior or graduate standing.

KHP 430 METHODS OF TEACHING HEALTH EDUCATION. (3)

A variety of contemporary teaching methods appropriate for use in grades K-12 will be presented. Students will be exposed to these methods through textbook and outside readings and through observation of the instructor, public school teachers, and peer teachers. Methods will be critically examined for effectiveness in the cognitive, affective, and behavioral areas. Prereq: KHP 220, 230, or equivalent, or consent of instructor via permit; and admission to Teacher Education Program or consent of instructor via permit.

KHP 445 INTRODUCTION TO TESTS AND MEASUREMENTS. (3)

An analysis of written and motor performance tests in health, safety, physical education, and recreation. Laboratory experiences in the administration, scoring, and interpretation of motor performance tests are provided. Lecture, two hours; laboratory, two hours.

KHP 450 INTRODUCTION TO EXERCISE TESTING AND PRESCRIPTION. (3)

The course addresses fundamental principles of Exercise Science specifically as they relate to the testing and exercise prescription of apparently healthy individuals with controlled disease. The class will review concepts essential for successful completion of the American College of Sports Medicine Certified Personal Trainer and Health Fitness Instructor exams. Prereq: ANA 209, PGY 206.

KHP 546 PHYSICAL EDUCATION WORKSHOP. (1-3)

A concentrated study in a specific sport or activity or field of emphasis in physical education. May be repeated to a maximum of six credits.

KHP 547 PSYCHOLOGY OF SPORT AND PHYSICAL ACTIVITY. (3)

An analysis of research findings in the psychology of teaching and coaching with emphasis placed on those factors which influence the acquisition of motor skills as well as on the psychological benefits of exercise and sport. Prereq: Undergraduate psychology course and basic statistics or consent of instructor.

KHP 560 MOTOR DEVELOPMENT IN INFANTS AND YOUNG CHILDREN. (3)

An analysis of the processes of learning to move and moving to learn in infants and young children. Emerging interrelationships among the motor, social, emotional, and cognitive forms of behavior are explored. Laboratory experiences are provided in early childhood education programs. Prereq: PSY 100.

KHP 579 ADAPTED PHYSICAL EDUCATION. (3)

A study of programs of adapted and developmental physical education for individuals with disabilities. Experiences will include the appraisal of psychomotor functioning, design of instructional intervention, and program implementation and evaluation. Lecture, two hours; laboratory, two hours. Prereq: KHP 515 or consent of instructor.

GRADUATE COURSES

KHP 601 TEACHING EFFECTIVENESS AND LEADERSHIP IN KINESIOLOGY AND HEALTH EDUCATION. (3)

This course will examine the current research relevant to teacher effectiveness. The development and implementation of practical methods for improving teacher effectiveness in Kinesiology constitute the primary emphasis of the course. The Kentucky Teacher Standards will be emphasized and used to guide this course.

KHP 644 RESEARCH TECHNIQUES APPLIED TO KINESIOLOGY AND HEALTH PROMOTION. (3)

A critique of research procedures for purposes of developing more efficient research designs applicable to problems in kinesiology and health promotion. Should be preceded or accompanied by basic statistics and introduction to measurement.

KHP 676 CURRENT ISSUES AND PROBLEMS IN SPORT MANAGEMENT. (3)

An in-depth analysis of pertinent issues and problems affecting the management of sport and fitness programs. Prereq: Admission to the program or consent from the instructor.

KHP 680 SPORT AND FITNESS MARKETING. (3)

An introduction to the broad area of sport and fitness marketing to include a focus on marketing management as it applies to sport, the general nature of the sport and fitness consumer, pricing strategies and promotions, licensing, and the role of research in sport marketing.

KHP 681 FINANCIAL ASPECTS OF SPORT. (3)

Course focuses on principles, practices and theories associated with financial planning and management of enterprises engaged in the provision of sport related services and/or products. Topics include budget planning and preparation, preparing and analyzing financial statements, revenue sources, money management, preparation of business plans and feasibility studies. Prereq: ACC 201 and 202 and HPER, KHP major or consent of instructor.

KHP 682 CONTEMPORARY SPORT LEADERS. (1-3)

Using a team approach, students will engage in a variety of experiential learning projects with sport management and innovation as contextual themes. Special emphasis will be placed on self-reflection within sport leadership as well as real-life application in case studies, semi-structured interviews, and participant observation. Prereq: Consent of instructor.

#KHP 684 DIVERSITY IN SPORT AND FITNESS ORGANIZATIONS. (3)

This course offers an examination of the increasingly prominent diversity-related issues in sport organizations. With references to policy, theoretical frameworks, and a growing body of social science literature, students will explore such issues as, but are not limited to, race/ethnicity, gender, religion, sexual orientation, and disability and the various challenges that have emerged in sport organizations. These information exchanges will ultimately lead us to consider the role of key sport leaders and their strategies (or lack thereof) to promote and effectively maximize the benefits of a diverse workforce. Prereq: Admission to the program or consent of the instructor.

KHP 685 SUPERVISION OF SPORT AND FITNESS PERSONNEL. (3)

A study of the three major functions of the supervisor: planning, directing and controlling and their application to the area of organized sport. Prereq: Admission to the program or consent of the instructor.

KHP 686 SPORT MANAGER'S LABORATORY. (3)

A combination of lectures, laboratory experiences, and discussions which enable the student to demonstrate competence in application of various applied management skills learned in other KHP courses. Prereq: Admission to the program or consent of the instructor.

KHP 687 PRACTICUM IN SPORT MANAGEMENT. (3-9)

Extensive work experiences under the immediate supervision of qualified managers and sport management faculty coordinator. May be repeated to a maximum of nine credits. Prereq: HPER, KHPR majors (Sport Management) or consent of advisor.

#KHP 690 APPLIED FOUNDATIONS OF HIGH PERFORMANCE. (3)

This course evaluates physiological responses to exercise stimuli including a detailed examination of neuromuscular, metabolic and morphological skeletal muscle adaptations. In addition, factors that affect force production, advanced periodization, concurrent training, and recovery strategies are examined. Prereq: Graduate course in Exercise Physiology or consent of instructor.

#KHP 691 ANALYTICS IN HIGH PERFORMANCE. (3)

This course examines the use of athlete monitoring systems and other metrics to evaluate the stress-response relationship and performance outcomes. An emphasis is placed on data analysis and visualization. Prereq: An undergraduate or graduate statistics course or consent of instructor.

KHP 695 INDEPENDENT STUDY IN KINESIOLOGY AND HEALTH PROMOTION. (1-3)

A specific topic in physical education related to the student's interests and program needs is selected for intensive study. Work to be supervised by a graduate faculty member proficient in the area under investigation. May be repeated to a maximum of six credits. Prereq: Consent of instructor.

KHP 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

KHP 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

KHP 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

KHP 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

KHP 769 RESIDENCE CREDIT FOR THE DOCTORAL DEGREE. (0-12)

May be repeated indefinitely.

KHP 782 INDEPENDENT RESEARCH IN KINESIOLOGY AND HEALTH PROMOTION. (3)

Systematic investigation of a problem selected from the areas of kinesiology and health promotion. May be repeated to a maximum of nine credits.

SPORT MANAGEMENT***KHP 473 MANAGEMENT OF SPORT. (3)**

This course is intended to provide students with an overview of the management practices utilized in the sport and fitness industry. Sport Management will include learning opportunities related to planning and organizing; staffing; directing; and networking associated with managing a sport or fitness program. Prereq: Upper division KHP majors or consent of instructor.

KHP 550 PRINCIPLES OF RESISTANCE TRAINING. (3)

This course will provide students with the knowledge to design strength and conditioning programs for athletes. In addition, students will learn how to teach strength training, flexibility, and plyometric exercises. This class prepares students for the National Strength and Conditioning Association's certifications. Prereq: KHP 120, ANA 209, PGY 206.

KHP 570 PLANNING AND MANAGEMENT OF FACILITIES FOR SPORT. (3)

An introduction to the planning and management of sports facilities. The course will focus on elements of planning, design and management while examining functions related to maintenance, security, operations budgeting and evaluation. The course will be presented primarily in lecture format utilizing guest speakers but will also include facility visitations as integral parts of the course. Prereq: Upper division KHP major or consent of instructor.

***KHP 577 PRACTICUM IN KINESIOLOGY AND HEALTH PROMOTION. (3 or 6)**

KHP 577 is a three- or six-hour course which focuses on gaining practical experience in the professions of Kinesiology, Health Education and Health Promotion. It provides an opportunity for Kinesiology, Health Promotion minors and majors to apply the theories, knowledge and experiences gained from their coursework to real life situations. Depending on their discipline, students may gain experience in a variety of settings, including but not limited to physical therapy, personal training/fitness facilities, cardiac rehab, health department, student health, non-profit organizations, worksite wellness. Prereq: KINE, HEPER, KHPR majors and minors only or permission by instructor.

KHP 580 GROUP DYNAMICS IN SPORT AND PHYSICAL ACTIVITY. (3)

This course provides a comprehensive analysis of sport and physical activity from both a social psychological and group dynamics perspective. Sport and physical activity are highly social environments that can have wide and far reaching influence upon those who participate in them. Thus, students enrolled in this course will gain an advanced understanding of the major theories of group development, management, and maintenance, as well as the factors that determine how behavior and performance are affected by interactions with others in the context of sport and physical activity. Finally, students will learn and practically apply techniques related to team building, cohesion, and group work. Prereq: Upper division PHED, KINE majors or HPER, KHPR majors or consent of instructor.

KHP 585 FOUNDATIONS OF SPORT MANAGEMENT. (3)

An overview of the broad field of sport management with an emphasis on (1) the historical, political, sociological and economic parameters that influence sport; and (2) the issues related to sport and business in society and their application to sport organizations. Prereq: Sport Management graduate student or permission of instructor.

HEALTH PROMOTION**KHP 190 FIRST AID AND EMERGENCY CARE. (2)**

This course is a study of the human body with first aid subject matter, demonstrations, and skill training in the event of sudden illness or injury. The course is delivered in a hybrid manner with the lecture material being taught on-line and first aid skills being taught once a week in face-to-face laboratory sessions. American Red Cross Certifications for CPR, AED, and Responding to Emergencies First Aid are awarded to those who meet the criteria.

KHP 220 SEXUALITY EDUCATION. (2)

This course is designed to prepare educators to teach sexuality education in the schools. Emphasis is placed on justification of sexuality education, relevant content, appropriate teaching techniques, and precautions to take when teaching sexuality education.

KHP 222 DRUG EDUCATION. (2)

This course is designed to prepare educators to offer drug education in the schools. Emphasis is placed on the prevalence of drug use by youth; physiological, psychological, and social effects of various drugs; effective and ineffective approaches to drug abuse prevention; appropriate teaching strategies; and evaluating drug curricula.

KHP 230 HUMAN HEALTH AND WELLNESS. (3)

The study of health promotion, wellness, and disease prevention concepts as applied to individual, familial, and community health.

KHP 270 INTRODUCTION TO HEALTH EDUCATION AND HEALTH PROMOTION. (3)

This course is designed to provide students with an overview of the emerging professions of health education and health promotion. This course will focus on the history of health, future trends in health, increasing students' knowledge and skill development in health, and improving the students' ability to make application in the areas of health education and health promotion.

***KHP 310 APPLIED HEALTH EDUCATION PRACTICE. (3)**

This course is designed to enhance the skills of students who will be health education teachers. The emphasis will be on increasing awareness of how schools operate and identifying the characteristics of effective teaching, including a variety of discipline methods. Students will be able to spend several hours in practice teaching in schools.

KHP 325 COMMUNITY ORGANIZING IN HEALTH PROMOTION. (3)

This course is designed to provide students with an overview of community organizing and capacity building. There will be a focus on contextual frameworks and approaches used in community organization/building. Students will explore ways to conceptualize, promote and accomplish learning in various health promotion settings through community organizing and building across diverse groups and cultures, by advocating to influence public policy, and addressing ethical challenges that shape community organizing and capacity building. Prereq: KHP 270 - Introduction to Health Education and Health Promotion.

KHP 330 PLANNING AND IMPLEMENTING SCHOOL HEALTH EDUCATION PROGRAMS. (3)

A study of the foundations of school health education and the various factors that are involved in the processes of conceptualizing, planning, drafting, and implementing effective health education programs. Prereq: KHP 220 and KHP 230 or equivalents or permission of instructor.

***KHP 371 STUDENT TEACHING IN HEALTH EDUCATION. (3-12)**

This course is for students who are planning to teach Health Education. Students who enroll in this course have been admitted to the Teacher Education Program in Health Education and meet the requirements for student teaching. Students are trained in appropriate goals, objectives, instructional strategies and assessment for providing health education to students P-12. May be taken on a pass/fail basis only. Prereq: Admission to the Teacher Education Program in Health.

***KHP 380 HEALTH EDUCATION IN THE ELEMENTARY SCHOOL. (2)**

The focus of KHP 380 is directed toward analyzing critical health issues confronting youth in Grades PK-5. As such, students in KHP 380 will determine resources to assist in the development and implementation of evidence-based instructional methods that meet the unique health needs of children in elementary school. Students in KHP 380 will also critically examine school policy directed toward health promotion in the elementary school. Prereq: Admission to elementary or early childhood teacher education program or consent of instructor.

***KHP 430 METHODS OF TEACHING HEALTH EDUCATION. (3)**

This course is designed to acquaint the students with a variety of methods for teaching health that are appropriate for use in grades P-12. Students will be exposed to these methods through the textbook, observation of the instructor, school teachers, and peer teachers. This course is part of the clinical program in which students spend about one-third of the course practicing teaching in schools. Prereq: KHP 220, 222, and 230 or equivalent or consent of the instructor; and admission to the Teacher Education Program in Health Education.

***KHP 509 WORKSHOP IN HEALTH AND SAFETY. (1-3)**

This course is designed as a variable credit course in which the topic can vary from semester-to-semester. A variety of topics will be offered in the areas of health promotion and health education. May be repeated up to a maximum of six credits. Prereq: Upper division standing or permission of instructor.

KHP 520 PROGRAM EVALUATION. (3)

This course is an application-focused course that provides an overview of program evaluation. This course will cover the types of evaluation, the theory associated with evaluation, and the tools most commonly applied to the evaluation process. Students will develop an appreciation for the flexibility needed in order to perform evaluation tasks in practical situations related to their area of expertise. (Same as EDP 520/EPE 520.)

***KHP 590 ADVANCED HEALTH CONCEPTS. (3)**

An advanced, in-depth health education class examining current and major health issues. Specific topics will include the following and others as time permits: major non-communicable diseases, communicable diseases, intentional and unintentional injury, and stress. Prereq: KHP 230, upper division standing or permission of instructor.

KHP 602 PROMOTING PHYSICAL ACTIVITY FOR YOUTH. (3)

The purpose of this course is to provide educators and other professionals with the knowledge and skills necessary to promote physical activity for youth. Current research and philosophies will be presented in a manner that provides a sound philosophical and factual basis for promoting physical activity for youth primarily through schools. Topics such as motivation, health benefits of regular physical activity, physical activity guidelines, and assessment of physical activity will be covered. Students will also be exposed to strategies for increasing physical activity both during the school day and outside of school.

KHP 609 SEMINAR IN HEALTH AND SAFETY EDUCATION. (3)

Overview of the problems confronting persons in these fields and selected research findings applicable to these areas. Emphasis is given to gaining a better understanding of research data and to a greater utilization of research findings in both school and community health and safety endeavors. May be repeated to a maximum of nine credits. Prereq: Consent of instructor.

KHP 673 HEALTH PROMOTION AND BEHAVIOR CHANGE. (3)

This course focuses on health promotion and behavior change strategies: individual, interpersonal, organizational, community, and public policy will be considered as potential factors that can inhibit or promote behavior change.

KHP 674 FOUNDATIONS OF HEALTH PROMOTION. (3)

This course is designed to provide students with the foundations of health promotion and education including history, philosophy, and ethics in the field. Prereq: Health-related background and/or course work. Consent of the instructor.

KHP 675 HEALTH ASSESSMENTS. (3)

This course presents concepts and skills related to assessing health status at the individual and community level in a wellness environment. Emphasis is placed on, but not limited to, physical and psychological components of health. Prereq: Completion of/or in concurrent enrollment in KHP 674 or equivalent. Consent of the instructor.

KHP 677 PLANNING HEALTH PROMOTION PROGRAMS. (3)

This course addresses principles of planning, designing, implementing, and evaluating health promotion and education programs. Prereq: KHP 673 or instructor's permission.

KHP 678 SEXUAL HEALTH PROMOTION SEMINAR. (3)

This course is an intensive seminar on contemporary sexual health issues. Research, theoretical, and substantive issues relevant to studying sexual health will be covered. Students will critically evaluate sexual health education programs in school and community settings, sexuality research, develop depth and breadth of understanding key issues in sexual health promotion, and learn the various forms of inquiry used in the study of human sexuality.

KHP 683 LEADERSHIP, THEORY, AND PRACTICE IN SPORT AND FITNESS ORGANIZATIONS. (3)

This course is designed to provide students with an overview of the leadership/management concepts, skills, and practices utilized in an ever-changing sport and fitness industry. Prereq: Admission to the department or consent from the instructor.

KHP 688 EVENT MANAGEMENT IN SPORT. (3)

The purpose of the course is to provide the student with an understanding of event management issues and problems related to the supervision, management, and business operations of various events. Prereq: Admission to the program or consent from the instructor.

EXERCISE SCIENCE

KHP 350 STRENGTH AND CONDITIONING FOR SPORTS. (3)

The course addresses the fundamental principles of Exercise Science specifically as they relate to the conditioning of athletes. The course will also review concepts essential for successful completion of the National Strength and Conditioning Association's CSCS exam. Prereq: ANA 209, PGY 206, KHP 120.

KHP 450 INTRODUCTION TO EXERCISE TESTING AND PRESCRIPTION. (3)

The course addresses fundamental principles of Exercise Science specifically as they relate to the testing and exercise prescription of apparently healthy individuals and individuals with controlled disease. The class will review concepts essential for successful completion of the American College of Sports Medicine Certified Personal Trainer and Health Fitness Instructor exams. Prereq: ANA 209, PGY 206.

KHP 600 EXERCISE STRESS TESTING AND PRESCRIPTION. (3)

Knowledge required for the administration of an exercise stress test with implications for writing an exercise prescription. Content covers healthy individuals as well as those with various health problems such as heart disease, hypertension, mental illness and diabetes. Course implements the Guidelines of the American College of Sportsmedicine in preparing a specialist in exercise stress testing. Lecture, two hours; laboratory, two hours per week. Prereq: PGY 206, KHP 420G, consent of instructor.

KHP 615 BIOMECHANICS OF FUNDAMENTAL MOVEMENTS. (3)

A research oriented, qualitative and quantitative investigation into the fundamental human movement patterns of ambulation, jumping, throwing, and striking. Lecture, two hours; laboratory, two hours. Prereq: An introductory course in physics, KHP 515, and consent of instructor.

KHP 616 SPORTS BIOMECHANICS. (3)

Application of fundamental concepts in biomechanics to analysis of sports skills. Class will examine how motions are created and controlled to enable specific sport performances. Mechanics related to injury will also be investigated. Prereq: Undergraduate course in biomechanics or consent of instructor.

KHP 617 GAIT ANALYSIS. (3)

This course is a graduate level experience into the analysis of human gait. Walking, running, and pathological gait will be studied. Prereq: KHP 615 or similar course.

KHP 620 ADVANCED EXERCISE PHYSIOLOGY. (3)

Aimed at development of an in-depth understanding of the acute and chronic adaptations of the human body to the stress of exercise. Lecture, two hours; laboratory, two hours. Prereq: KHP 420G or consent of instructor.

KHP 640 LAB METHODS IN EXERCISE SCIENCE. (3)

Introduces students to measurement techniques used in exercise science. Emphasis is placed on calibration of instruments and on concepts of accuracy, validity and reliability. Prereq: Consent of instructor.

KHP 650 MOTOR CONTROL II: REFLEXES, COGNITION AND MOVEMENT. (3)

This second course in the motor control sequence introduces recent theories on how cord and brain function to aid in movement control. Prereq: Anatomy & Physiology, Motor Control I, or consent of instructor.

KHP 715 THREE-DIMENSIONAL BIOMECHANICAL ANALYSIS OF HUMAN MOVEMENT. (3)

This course will provide an in-depth study of the basic methods of three-dimensional biomechanical analysis of human movement based on the inverse dynamics approach. Prereq: KHP 615 or consent of instructor.

KHP 720 SPORTS MEDICINE. (3)

A study of the basic areas covered in sports medicine with readings and discussions of current international trends in the research and practice in this field. Prereq: Twelve semester hours; credit in the field of biological sciences; consent of instructor. (Same as AT 720.)

KHP 785 GRADUATE SEMINAR IN EXERCISE SCIENCE. (0-1)

Faculty, students and invited speakers will present and discuss current research in Exercise Science. Students enrolled for credit will be required to present a seminar on their own research. Students presenting a seminar will be provided feedback by faculty and seminar participants. May be repeated to a maximum of 2 times for credit, unlimited times for zero credit. Prereq: Graduate standing in Ph.D. in Exercise Science program or consent of instructor.

LA Landscape Architecture**LA 105 INTRODUCTION TO LANDSCAPE ARCHITECTURE. (3)**

A survey of landscape architecture examining how the profession responds to societal needs in providing services to various public and private clients. Students will become aware of the potential for landscape architecture to transform the environments in which humans live, work, and play. Contemporary landscape architectural issues, practitioners and work are presented. Lecture, three hours per week.

LA 111 LIVING ON THE RIGHT SIDE OF THE BRAIN. (3)

Students in this course will gain an understanding and awareness of creative strategies that may be used in future problem solving. These strategies will help encourage creative thinking that will lead to more innovative and novel solutions. Students will practice a metacognitive approach by reflecting on their own thinking in an effort to enhance self-regulation and ultimately realize creative potential.

LA 121 LANDSCAPE ARCHITECTURE DESIGN STUDIO I. (6)

Introduction to the fundamental elements and principles of design. Emphasis is on the application of design thinking and creative process to a variety of design problems. Observation, communication, and critique are stressed as components of process. Lecture, three hours; studio, nine hours per week. Field trips may be required. Prereq: Student must be accepted in the Landscape Architecture Program and enrolled in LA 161 (or previous completion of equivalent graphics course).

LA 161 GRAPHICS I. (3)

A study of landscape architecture graphics including freehand sketching, plan, section, and perspective drawing. Rendering techniques in both black and white and color will be explored with a variety of media including pencils and markers. Lecture, two hours; studio, two hours per week. Prereq: Non-LA majors must have permission of instructor.

LA 162 DIGITAL REPRESENTATION I. (3)

This course provides students with a basic knowledge of computer-aided methodologies applied to site design and design articulation. It focuses on utilizing computer-aided drafting/design as a tool for producing the sequence of drawing commonly used in professional design offices. The interface of computer-aided drafting/design software with various other digital applications to produce representations of site information is also emphasized. Lecture, 2 hours, laboratory, 2 hours per week. Prereq: LA 161.

LA 205 HISTORY OF LANDSCAPE ARCHITECTURE. (3)

A study of landscape design through past civilizations and how these have influenced our present approach to dealing with our landscape.

LA 222 LANDSCAPE ARCHITECTURE DESIGN STUDIO II. (6)

LA 222 continues the core emphasis on process and design vocabulary from LA 121. The course is focused on the connections between landscape architectural design, place, and regional landscapes, along with the continued development of graphic, written, and oral communication skills. Lecture, three hours; studio, nine hours per week. Field trips may be required. Prereq: LA 121 with a minimum grade of "C" and enrollment in LA 162 (or previous completion of equivalent CAD course). This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

LA 223 LANDSCAPE ARCHITECTURE DESIGN STUDIO III. (6)

Design studio emphasizing design process applied to site programming, landscape analysis, and site planning. Use of actual sites to emphasize relationships between landscape analysis processes, landscape topology, and landscape ecology. Low impact site development practices are stressed. Field trips may be required. Lecture, three hours; studio, nine hours per week. Prereq: LA 121 with a minimum grade of "C", LA 105, LA 162 or equivalent CAD course; and PLS 366 or concurrent enrollment in PLS 366. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

LA 262 GRAPHICS II. (3)

Study and application of graphic communication methods with emphasis on integration of analog and digital multiple media and technologies. Lecture, two hours; laboratory, two hours per week. Prereq: LA 162.

LA 271 DESIGN IMPLEMENTATION I. (4)

This course develops competency in solving problems relating to site grading, drainage systems, road alignment, and other aspects of site engineering. Field trips may be required. Lecture, two hours; studio, six hours per week. Prereq: LA 162 or permission of the instructor.

LA 305 DESIGN THEORIES IN LANDSCAPE ARCHITECTURE. (3)

This course will address a variety of viewpoints in design thinking as related to landscape architecture. Theoretical and philosophical foundations for environmental interventions will

be explored and the process of design criticism as a form of inquiry will be emphasized. Prereq: LA 205 or permission of instructor.

LA 307 CULTURAL LANDSCAPE PRESERVATION. (3)

An introduction to cultural landscape preservation activities as design strategies. Exploration of regional landscape preservation case studies and applications of preservation methods to landscape preservation issues with an emphasis on research and process. Lecture, two hours; studio, two hours per week.

LA 308 REGIONAL LAND USE PLANNING SYSTEMS. (3)

An introduction to regional land use planning and its relationship to environmental, social, and economic systems. Students will develop an understanding of how land use decisions have impacted the development of the United States and how they are used to determine future development directions.

LA 324 LANDSCAPE ARCHITECTURE DESIGN STUDIO IV. (6)

Studio design course emphasizing site selection and programmatic analysis in landscape master planning for complex site programs. Field trips may be required. Lecture, three hours; studio, nine hours per week. Prereq: LA 223 with a minimum grade of "C", PLS 366, and concurrent enrollment in PLS 320.

LA 345 DESIGN WITH PLANTS. (3)

The application of design principles to the functional and aesthetic use of plant materials in the landscape. Lecture, two hours; studio two hours per week. Prereq: LA 161 and PLS 320, or permission of instructor.

LA 355 INTRODUCTORY GEOSPATIAL APPLICATIONS FOR LAND ANALYSIS. (3)

An introduction to the concepts and methods of compilation, management, analysis, and display of spatially-referenced and tabular data utilizing vector and raster data models. Lecture will be complemented with computer based laboratory exercises. Lecture, two hours; laboratory, four hours per week. Prereq: Third year or above LA major, junior/senior NRES major, or permission of instructor. (Same as NRE 355.)

LA 372 DESIGN IMPLEMENTATION II. (4)

A continuation of landscape architecture design implementation; construction materials, including wood, paving, and walls, along with their applications: preparation of working drawings and materials specifications. Field trips may be required. Lecture, two hours; studio, six hours per week. Prereq: LA 271 with a minimum grade of "C".

LA 373 DESIGN IMPLEMENTATION III. (6)

Advanced instruction and practicum in the development of design implementation drawings. Students will produce a comprehensive set of working drawings that apply the principles and techniques commonly used in the landscape architecture profession. Field trips may be required. Lecture, three hours; studio, nine hours per week. Prereq: LA 372 with a minimum grade of "C" and PLS 320.

LA 390 INTERNATIONAL STUDY. (3)

International study program led by faculty in Landscape Architecture. Program locations vary from year to year. Other international study experiences may be accepted as equivalent for graduation requirements with permission of the Department Chair. Three credits. This course may be repeated with additional credits applied as an elective.

LA 395 INDEPENDENT STUDY IN LANDSCAPE ARCHITECTURE. (1-6)

Topical studies in landscape architecture allowing for individual research or design experience coordinated with academic pursuits and faculty mentorship and oversight. May be repeated with additional credits applied as an elective. Prereq: Permission of faculty.

LA 397 SPECIAL TOPICS IN LANDSCAPE ARCHITECTURE: (Subtitle required). (3)

Topical seminars on current issues of significance to landscape architecture. May be repeated to a maximum of six credits under different subtitles.

LA 399 INTERNSHIP IN LANDSCAPE ARCHITECTURE. (3)

This is a self-directed course that provides academic credit for a pre-approved internship relating to the practice of landscape architecture. Such an internship involved working for a minimum of eight weeks (320 hours) in a private or public landscape architecture office or in another professional setting associated with landscape architecture. Other experiences could include conservation work, research projects, or community engagement work. A practice portfolio, daily journal or professional engagement, and a summative presentation are required. This course may be repeated with additional credits applied as an elective. Prereq: LA 223 and completion of a Learning Contract.

LA 425 LANDSCAPE ARCHITECTURE DESIGN STUDIO V. (6)

Studio design course with emphasis on urban design and development, and associated public spaces. Field trips may be required. Lecture, three hours; studio nine hours per week. Prereq: LA 324 with a minimum grade of "C".

LA 426 LANDSCAPE ARCHITECTURE DESIGN STUDIO VI. (6)

Application of landscape architecture design process to address issues at a variety of scales with emphases on form generation, community engagement, and communication. Field trips may be required. Lecture, three hours; studio, nine hours per week. Prereq: LA 425 with a minimum grade of "C".

LA 457 CONTEMPORARY REGIONAL LAND USE PLANNING APPLICATIONS. (3)

This course builds on the systems learned in LA 308 and applies them, through GIS technology, to real world situations. In this course we will deal with rural development, decision making, and comprehensive land use within the context of the physical environment. Lecture, two hours; studio, three hours per week. Prereq: LA 308 or LA 355, or permission of instructor.

LA 462 DIGITAL REPRESENTATION II. (3)

This course focuses on the representation of essential elements of the landscape (structures, landform, water, vegetation, and atmosphere) in three dimensions utilizing a variety of software packages. Students learn about 3D modeling tools that will prepare them later in the course to experiment with a variety of visualization methods. Students will test the appropriateness of visualization methods in search of a balance between realistic representations and software limitations. Lecture, 2 hours; studio, 2 hours per week. Prereq: LA 262 or consent of the instructor.

LA 490 CAPSTONE AND PROFESSIONAL PRACTICE SEMINAR. (2)

A capstone course in which students will formally document their competency relative to knowledge, skills, and abilities developed in the landscape architecture major. This course will help students prepare to become practicing landscape architects and/or pursue additional formal education. Seminar, three hours per week; field trip(s) required. Prereq: LA 425.

#LA 531 WATER IN URBANIZING LANDSCAPES. (3)

This course is an introductory overview to water processes and water management in a watershed. An emphasis will be placed on hydrological landscape processes, best management practices and classification of streams, as well as storm water and water management in urban and suburban settings. Data collection, analysis, and fieldwork will be a required portion of the class during the lab section. Lecture, 2 hours; laboratory, 2 hours per week. Prereq: PLS 366 or consent of the instructor.

LA 556 CONTEMPORARY GEOSPATIAL APPLICATIONS FOR LAND ANALYSIS. (3)

Advance concepts in data base analysis, model development, and ancillary functions in geographic information systems. Lecture, two hours; laboratory, four hours per week. Prereq: LA 355/NRE 355 and permission of instructor. (Same as NRE 556.)

LAS Latin American Studies

LAS 201 INTRODUCTION TO LATIN AMERICA. (3)

An interdisciplinary approach to the people, culture and development of the Latin American republics. Attention will be concentrated on significant aspects of the indigenous peoples, geography, economic processes, gender roles, social structures and politics of Latin America, with special attention paid to value structures and value conflicts. Musical, literary and artistic expression in Latin America will also be introduced. Team taught, with a course coordinator from the LAS faculty.

LAS 361 LATIN AMERICAN LITERATURE IN TRANSLATION (Subtitle required). (3)

This course examines particular authors, periods, regions, cultural events, or movements from Latin America. Special attention will be paid to links between literature and culture, politics and society through reading, discussion, and writing assignments to be conducted in English. Course may be repeated under different titles to a maximum of six credits. (Same as SPA 361.)

LAS 395 INDEPENDENT WORK IN LATIN AMERICAN STUDIES. (3)

Directed study for students wishing to do specialized work on a topic related to the Latin American Studies area. May be repeated to a maximum of six credits. Prereq: LAS 201 and six hours course work from approved LAS courses.

LAS 401 DIRECTED RESEARCH IN LATIN AMERICAN STUDIES. (3)

Research on an interdisciplinary topic approved by the LAS Advisory Committee in the area of Latin American Studies. Prereq: Major in Latin American Studies; senior standing.

LAS 601 INTERDISCIPLINARY SEMINAR IN LATIN AMERICAN, CARIBBEAN, AND LATINO STUDIES. (3)

This course introduces graduate students to Latin American Studies. It is a topical seminar, which engages a series of fundamental issues or problems of importance to scholars of Latin America. Coordinated by a LACLAS affiliated faculty member, it addresses these issues of current scholarly interest from multiple disciplinary perspectives and examines the philosophy and methods of interdisciplinary research. The Interdisciplinary Seminar features guest appearances in the classroom by LACLAS affiliated faculty. Prereq: Graduate student or approval by professor.

LAW Law

LAW 801 CONTRACTS/SALES I. (3)

Formation of contracts; offer, acceptance, consideration. Statute of Frauds, parole evidence rule. Sale of goods under Article 2 of the Uniform Commercial Code.

LAW 802 CONTRACTS/SALES II. (3)

Continuation of Contracts/Sales I - Statute of Frauds, performance, express and implied conditions, repudiation, impossibility.

LAW 804 LEGAL RESEARCH AND WRITING SKILLS. (0-4)

Training in legal research, legal writing, legal reasoning and analysis, legal citation, and oral advocacy. In the legal research portion of the course, students receive training in how to approach basic research tasks and how to use a variety of print and electronic resources for performing research. In the legal writing portion of the course, problem-based writing assignments are used to train students in effective legal writing, legal reasoning and analysis, and legal citation, and to introduce students to oral advocacy. Students are exposed to some of the types of legal documents that are commonly used by lawyers in practice and the different legal audiences for those documents. The four hours of academic credit for this year-long course are given in the spring.

LAW 805 TORTS. (4)

Intentional torts and defenses, negligence, causation, duties of occupants of land and manufacturers and vendors of chattels, contributory negligence, strict liability, deceit, defamation, malicious prosecution, interference with advantageous relations.

LAW 807 PROPERTY. (4)

Basic course in property; possession, gifts, bona fide purchasers of personalty. Estates, uses, easements, and rights incident to ownership.

LAW 809 FEDERAL CRIMINAL LAW. (2-3)

This course will cover federal white collar criminal issues, including RICO, mail and wire fraud, political corruption, bank secrecy laws, and false statement laws.

LAW 810 CRIMINAL LAW. (3)

Jurisdiction; the criminal act, complete and incomplete; criminal intent, actual and constructive; duress and mistake of fact, of law; justification; parties in crime; crimes against the person and crimes against property.

LAW 811 CRIMINAL PROCEDURE I. (3)

This course will cover search and seizure, the privilege against self-incrimination, confessions and identification procedures—in general, the constitutional cases arising out of the conflict between police practices and the Bill of Rights.

LAW 812 RACE, RACISM AND THE CRIMINAL LAW. (3)

This course examines, through an interdisciplinary approach, the effects race has had and continues to have on the administration of criminal justice in the United States. The course begins by exploring the concept of race from different perspectives: biological; anthropological; sociological; psychological; and legal. The course then examines how these legal constructs shaped the role race played in American culture. The course then delves into how race and the criminal justice system have interacted from historical and contemporary perspectives. Accomplishing this requires probing critical issues encountered at key stages in the process governing the administration of criminal justice. These issues include: the existence of offenses based on racial status (crimes such as rape, capital murder, drug offenses, racial profiling (driving and flying while black)); victimology; pre-trial practices (bail); trial practices (misconduct by prosecutors and defense attorneys, urban rage defense, evidentiary issues, such as cross-racial identification and jury deliberations); and post-conviction (incarceration rates, loss of franchise) consequences.

LAW 813 CAPITAL PUNISHMENT. (3)

This course provides an examination of history, purpose and constitutionality of capital punishment. The course will also discuss death penalty eligibility/offenses and will provide an international perspective.

LAW 814 CRIMINAL TRIAL PROCESS. (3)

This course will cover in-depth the criminal trial process from the initial court appearance: grand jury proceedings, pretrial motions, discovery, trial, pleas, sentencing, appeals, double jeopardy and habeas corpus. Students who have taken LAW 813, Criminal Procedure II, may not take this course.

LAW 815 CIVIL PROCEDURE I. (3)

Introduction to the civil action; personal and in rem jurisdiction; service or process and notice; subject matter jurisdiction; venue; choice of law; pleading.

LAW 817 CIVIL PROCEDURE II. (2-3)

Joinder of claims and parties; discovery; summary judgment; right to jury trial; trials and posttrial motions; res judicata and collateral estoppel.

LAW 818 REMEDIES. (3)

Nature of damages; nature of specific relief; personal interests; contractual interests; property interests; specific relief and the government.

LAW 819 THE FEDERAL COURTS AND THE FEDERAL SYSTEM. (3)

The nature of the federal judicial function and its development, distribution of power among federal and state courts, Supreme Court review of state court decisions, the law applied in federal district courts, federal question and diversity jurisdiction, federal habeas corpus, removal jurisdiction and procedure.

LAW 820 CONSTITUTIONAL LAW I. (3)

Judicial interpretation of the Constitution; the federal system; powers of the national government; limitations on the exercise of state powers.

LAW 821 LITIGATION SKILLS. (3)

The skills of litigation, including trial advocacy, interviewing and counseling, negotiation and pleading. Lecture, one hour; laboratory, five hours. Prereq or concur: LAW 890.

LAW 822 CONSTITUTIONAL LAW II. (3)

Protection of individuals and organizations by the Bill of Rights, the fourteenth amendment, and other provisions of the Constitution.

LAW 823 CONFLICT OF LAWS. (3)

Nature of the subject, penal laws, procedure, judgments, domicile, capacity, form, particular subjects, litigation, family law, inheritance, foreign administrators.

LAW 824 ALTERNATE DISPUTE RESOLUTION. (3)

Methods of dispute resolution other than trial; statutory and judicial regulation; presenting a claim in different formats of ADR.

LAW 825 THE NEGOTIATING PROCESS. (2)

Analysis of the elements of bargaining power; exercises in the negotiating process in various contexts; basic techniques of negotiation; ethical norms of the lawyer-investigator. Lecture, one hour; laboratory, two hours per week.

LAW 826 LEGAL DRAFTING. (2-3)

This course systematically explores drafting process and technique and provides drafting practice. Students complete drafting-related exercises which become the focus of class discussions. Students also complete major drafting projects. These may consist of a will, a contract, a piece of legislation or other common lawyer work product. Major drafting projects are the focus of class discussions and individual or small group meetings with the instructor.

LAW 827 FEDERAL APPELLATE ADVOCACY AND PROCEDURE. (2-3)

This course provides an introduction to appellate practice and procedure in federal court. This course is designed to provide students the basic substantive knowledge and skills needed to advocate effectively in a federal court of appeals. The course begins with a discussion of the function of the court of appeals and the function and the determination of whether to appeal, including the effect of an appeal. The course discusses initiating and perfecting an appeal from state and federal courts, relief pending appeal, and the record on appeal. The course provides an intensive training in appellate skills and includes written and oral assignments. The writing assignments include the preparation of a notice of appeal, a brief, and various motions, including a motion to dismiss for lack of jurisdiction and a motion for panel or en banc rehearing. The course also provides a comprehensive study of the Federal Rules of Appellate Procedure, including the standards and procedures for obtaining a writ of certiorari from the Supreme Court, and the local rules of the Court of Appeals for the Sixth Circuit, including electronic filing. The course includes instruction on oral advocacy, mock arguments on the briefs, and the options and procedures for obtaining further review of an adverse appellate decision. In addition, federal practitioners and federal appellate judges will be invited to discuss appellate advocacy. The course satisfies the College of Law's Professional Skills requirement.

LAW 828 STATUTORY CIVIL RIGHTS. (3)

This is a survey course designed to cover the entire field of federal antidiscrimination law. Topics to be covered may include employment discrimination (primarily focusing on race, sex, age, and disability issues and possibly affirmative action); housing discrimination (primarily focusing on race, disability, and family issues); other disability discrimination issues under the Americans with Disabilities Act; discrimination in public accommodations and government programs; voting rights litigation issues involving proof (e.g., how cases based on direct evidence of intent, circumstantial evidence of intent, and disparate impact differ from one another), special defenses, and remedies; and a brief survey of the more important questions that arise in Section 1983 litigation. Prereq: LAW 822.

LAW 829 STATE CONSTITUTIONAL LAW. (3)

This course provides a comprehensive overview of the law of state constitutions. Course topics include the framing of state constitutions; state constitutional rights; state governmental powers; the structures of state government; and state constitutional change, including theories of popular constitutionalism and direct democracy. Each of these topics will be addressed in two ways: (1) through comparison of the treatment of the topics in different state constitutions and the federal Constitution; and (2) through focused experimentation of the topics as they are presented in the Kentucky Constitution and interpreted in Kentucky case law. Prereq: LAW 822 – Constitutional Law II.

LAW 830 HEALTH LAW I. (3)

This course examines the regulation of health care access, cost and quality. It will cover public and private market rules controlling access to health care, cost containment rules, and regulations regarding the quality of health care.

LAW 831 BIOETHICAL ISSUES IN THE LAW. (2-3)

This course will cover topics such as legal reasoning in bioethical situations, determination of death, issues in human reproduction, organ transplantation, genetic testing, clinical research with human subjects, and end-of-life decision-making. This second survey course in the health law area will provide students who take this course and Healthcare Organizations and Finance (LAW 830) with a broad understanding of this increasingly important area of the law. Neither class is a prerequisite for the other class. They may be taken concurrently or in any order chosen by the student. Students must take either this course or LAW 830 in order to enroll in the seminar entitled Healthcare Law and Policy Seminar.

LAW 832 MEDICAL LIABILITY. (3)

This course examines the liability issues that arise from the provision of medical care. The course studies the physician/patient relationship, when it begins and how it can be terminated. It examines the extent of the duties owed by providers to patients, including requirements relating to confidentiality, informed consent and records disclosure. The course also provides a detailed treatment of the common law of provider liability, focusing on medical malpractice. The course also examines the question of legislative reform of medical liability.

LAW 833 CIVIL PRETRIAL PRACTICE. (3)

Over 95% of the cases filed in courts today settle or are disposed of by motion. To be prepared properly for the practice of law, students aspiring to be civil litigators will need instruction in pretrial matters. This course is designed to provide the student with a working knowledge of both pretrial advocacy theory and fundamental pretrial skills involved in civil litigation. Students will receive instruction on all aspects of civil pretrial practice, primarily in federal court, including: case evaluation, interviewing, fact investigation and evaluation, client counseling, pleadings, discovery, negotiations, mediation, and motions practice. The course will typically be based upon mock federal civil case files for which students will be divided into plaintiff and defendant counsel groups. In addition to discussion of pretrial methods, rules and procedures, the students will actually prepare the mock case by evaluating the case, interviewing witnesses, fact finding, and participating in both written and oral discovery as well as motion practice and pretrial conferences and/or mediation. By actively practicing the technique and theory learned, the students will be involved in problem solving, legal analysis, strategy, management of cases and the resolution of ethical problems presented. Students will develop written and oral skills while applying substantive law as required by the chosen case file. Enrollment is limited to 24 students. Prereq: Evidence (LAW 890).

LAW 835 PROFESSIONAL RESPONSIBILITY. (2-3)

An examination of the varying roles played by lawyers in society and the conflicting pressures created to each role. Special attention is paid to the Code of Professional Responsibility as a guide and control in the lawyer-client relationship. Also considered at length is the role of law in society and the place of the legal profession in society. Guest speakers are used to bring into focus employment options for lawyers and the viewpoints of varying types of practicing lawyers to the pervasive problems of the legal profession.

LAW 836 LAW AND ECONOMICS. (2)

This course applies neoclassic economics concepts to the law. It offers economic explanations of legal rules (for example, explaining how legal rules tend to move society toward or away from economic efficiency). The course also explores normative issues, such as whether the pursuit of economic efficiency is morally attractive. The course looks at the following areas of the law: property, contracts, torts, family law, criminal law, employment law, corporate law, and securities law.

LAW 838 LAW AND RELIGION. (3)

The relationship of law to religion with emphasis on the establishment and free exercise clauses of the First Amendment. Prereq: LAW 822.

LAW 839 WOMEN AND THE LAW. (2-3)

Constitutional aspects of sex discrimination, employment discrimination. A criminal law unit covering women as victims and as offenders.

LAW 840 SUPREME COURT DECISION MAKING. (2-3)

This course will focus on the mechanics of judicial decision making and opinion writing. Each week, students will read the lower court opinion and merits and selected amicus briefs of selected cases currently pending before the U.S. Supreme Court. The class will focus on these cases and deliberate the merits of each side's arguments, much like the Supreme Court does during its conferences. We will also explore theories of judicial decision making, interpretation and policy. At the end of each class, we will "vote" as to how we think the decision should come out. Students will be expected to write majority and dissenting opinions in one of the cases we discuss, which must include substantial original thought and research. The grade will be based primarily on these judicial opinions. Prereq: LAW 822 – Constitutional Law II.

LAW 842 SPORTS LAW. (3)

Surveys regulatory and contractual aspects of this multi-million dollar industry. Includes issues related to intercollegiate athletics; professional recruitment and contracting; labor and anti-trust issues; liability issues and other related topics.

LAW 845 JURISPRUDENCE. (3)

This course presents a survey of the various schools of legal philosophical thought, with an emphasis on exploring how these intellectual "value systems" necessarily inform judges' decisions, and how they might therefore influence one's choice of legal argument in a given case. The course will include readings from formalism, legal positivism, process theory, legal realism, law and economics, critical legal studies, feminist legal theory, and critical race theory, among others.

LAW 850 LEGAL ACCOUNTING. (2-3)

This course is designed to introduce students to general bookkeeping and accounting principles. Class discussion will concentrate on the relevance of accounting judgments to legal issues rather than focusing on technical problems. Students will examine income statements, balance sheets, and other accounting documents. Emphasis will be placed on an understanding of accepted accounting principles (GAAP) and the abuses of GAAP. Students with undergraduate financial accounting can take this course only with permission of the professor.

LAW 851 BUSINESS ASSOCIATIONS. (4)

Legal introduction to business organization; emphasis on nature and structure under modern American business corporation law. Areas: partnership planning (formation, property rights, dissolution and liquidation rights); steps for corporate organizing (including legal consequences of defective incorporation); nature of corporate entity concept; corporate control and management (including problems of close corporation); fiduciary duties of directors and controlling shareholders under state law; nature and characteristics of shareholders' derivative suit. Prereq: Completion of first year of law study generally is expected.

LAW 855 CORPORATION FINANCE LAW. (3)

A study of selected problems in advanced corporation law, including corporate promotion and capitalization (with special emphasis on senior securities and their characteristics); corporate distributions (dividends); recapitalizations (elimination of accrued dividends); public regulation of security issues (Securities Act of 1933 and state Blue Sky laws).

LAW 856 BUSINESS PLANNING. (3)

This course involves the planning of business transactions and combines the applicable corporate, tax, and securities considerations of such transactions in a single course. Emphasis will be on some of the more important types of corporate transactions, such as the organization of a private corporation and a public corporation, conflicts between stockholders of a close corporation, and corporate combinations. Course is limited to third-year students who have had a background in corporations and income tax. Knowledge of securities regulation and corporate tax is desired.

LAW 858 NONPROFIT ORGANIZATIONS. (2-3)

This course introduces students to the laws and policies governing the formation operation and dissolution or conversion of nonprofit organizations, including charities, foundations, associations, and clubs. The class will cover the creation and governance of nonprofit organizations as well as federal tax law relating to charities and other nonprofit organizations. The class will include both lectures and practical exercises. Prereq: LAW 851 (Business Associations).

LAW 860 TAXATION I. (3-4)

Problems in federal and state income taxation.

LAW 861 PARTNERSHIP TAX. (2)

Federal income taxation of transactions between partners and their partnership and shareholders and their corporation; organization of partnerships and corporations; taxation of distributions of operating profits, liquidations, and sales of interests. Prereq: Taxation I (LAW 860).

LAW 863 TAXATION OF BUSINESS ENTERPRISES II. (3)

Advanced problems of federal income taxation of corporations and partnerships; mergers and acquisitions; reorganizations, recapitalizations; affiliated corporations; consolidated returns. Prereq: Taxation I (LAW 860).

LAW 864 REAL ESTATE TRANSACTIONS. (3)

This course covers numerous issues related to real estate conveyancing, including contractual issues, title assurance, and financing the transactions. Prereq: Property.

LAW 865 ESTATE AND GIFT TAX. (2-3)

The primary focus of this course is the federal taxation of wealth transfers, whether those transfer occur during lifetime or after death. Also examined will be the goal of balancing the minimization of clients' transfer tax obligations with the other non-tax goals clients might have, as well as the policy goals behind imposing a wealth transfer tax, and the statutory and regulatory strategies used by the government to respond to impermissible avoidance techniques.

LAW 866 ADVANCED ESTATE PLANNING. (2-3)

This is a two-hour, problem-oriented, skills course. Problems will be distributed to the class involving detailed factual situations, e.g., owners of a small, closely held business; a middle income family with three minor children and a fiancé seeking a prenuptial agreement. Students will be expected to draft appropriate wills, trusts, and other legal documents for their clients. Role playing will be used to better simulate realistic situations. Students will learn some of the more sophisticated estate planning techniques, e.g., revocable trust agreements; trusts utilizing unified credit exemptions of both spouses; charitable remainder trusts; prenuptial agreements; post-nuptial agreements; planning for qualified pension plans; etc. Emphasis will be placed on teaching interviewing skills, communicating with clients, ethical considerations, financial planning and drafting skills. Enrollment is limited to a maximum of 16 students. Prereq: Estate and Gift Taxation and Planning (LAW 865) and Trusts and Estates (LAW 876).

LAW 871 ENERGY AND MINERAL LAW AND POLICY. (3)

Energy and Mineral Law and Policy will provide an introduction to energy and mineral law, regulation and policy in the United States. It will cover the regulatory environment, state and federal, for natural gas, electricity, coal, and nuclear power. It will explore the generation, distribution and regulation of electricity, coal, oil and gas, and renewable energy sources. Regulation of utilities will also be covered.

LAW 872 LAND USE PLANNING. (2-3)

A comprehensive survey of the basic legal devices to control the use of land, theories of land use planning, nuisance, private agreements, zoning and zoning procedure, the role of the federal government in land planning, exercise of eminent domain, and selected Kentucky problems, such as rural zoning and proposed New Towns for Appalachia.

LAW 874 BANKING LAW. (2-3)

History of banking; overview of agencies which regulate bank activities; formation and regulation of bank holding companies; bank mergers and acquisitions; branch banking; antitrust considerations; trust operations conducted by banks; impact of securities legislation on bank loans and bank financing; the FDIC and its impact on a failing bank.

LAW 875 SECURITIES REGULATION. (3)

The law governing the issuance, distribution and trading of securities under the Securities Act of 1933 and the Securities Exchange Act of 1934; the obligation to register securities; public offerings by issuers; secondary distributions; and registration requirements growing out of mergers, definition of a "security" and the exemptions from registration requirements; insider

trading prohibitions; antifraud provisions in tender offers, self tenders, proxy solicitations and the purchase and sale of securities.

LAW 876 TRUSTS AND ESTATES. (4)

An elective course for second-year law students. Examination of rules governing intestate distribution of property; formal requirements governing execution, alteration and revocation of wills; requisite elements of express trusts and requirements for their creation; special rules relating to charitable trusts and spendthrift trusts; rules concerning construction of wills and trusts and general rules governing administration of decedents' estates and trusts.

LAW 881 PAYMENT SYSTEMS. (2-3)

This course focuses on the basics of payment transactions using check and other negotiable instruments. In the longer version of this course, coverage will also include the regulatory structure governing modern electronic payment systems. Prereq: Basic Uniform Commercial Code.

LAW 882 SECURED TRANSACTIONS. (3)

This course focuses on secured credit transactions and will include an examination of contemporary bank lending practices.

LAW 885 COMMERCIAL DEBTOR-CREDITOR RELATIONS. (2-3)

Minimizing risk of loss through bankruptcy by business creditors and debtors; Uniform Commercial Code versus the federal Bankruptcy Act; nonbankruptcy creditors' and debtors' remedies in commercial context, including assignments and arrangements under state law; commercial bankruptcy; rehabilitation under Bankruptcy Act.

LAW 887 INSURANCE. (2-3)

Nature of contract, insurable interest, making the contract, concealment, representations, warranties, implied conditions of forfeiture, waiver and estoppel, rights under the contract, and construction of the policy.

LAW 890 EVIDENCE. (4)

Rules of admissibility, real, circumstantial, testimonial and documentary evidence, witnesses, hearsay rule and its exceptions, procedure of admissibility, law and fact, judge and jury, burden of proof and presumption, judicial notice, and parole evidence rule.

LAW 894 ANIMAL RIGHTS. (2)

This course provides an introduction to issues and laws pertaining to the rights of animals, including: the different statutory and non-statutory definitions of the term "animal," their evolution, and the significance of these changes; the general and specific legal status of animals is considered; the history of the legal status and rights of two other types of property that belong to the tangible sentient personal property category (slaves and minor unemancipated children), and how the criminal law did, and does, intersect with the property owner's right in this category of personal property. The course will then examine specific contemporary "rights" of animals with respect to freedom from abuse, neglect and cruelty, in situations involving companion/pet animals, sporting (including fighting), racing, hunting, and entertainment.

LAW 895 EQUINE LAW. (2-3)

This course is directed at students with an interest in developing an in-depth knowledge of current issues in equine law. Equine law is an amalgamation of various areas of the law employed specifically in the advancement of the equine industry. The industry is founded on a tradition of handshake deals (which still take place at the highest level) but is increasingly sophisticated. This course will take a multi-disciplinary approach and investigate current topics, including account wagering, simulcasting, stallion syndications, multiple ownership vehicles, intellectual property, tax and other emerging topics. The course will investigate the legal relationships (rights, duties, and obligations) among and between the constituent parties in horse racing, breeding, ownership and sport horse activities and the laws that to a greater or lesser degree define those relationships. Prereq: LAW 851 and LAW 860; concurrent enrollment in LAW 851 is permitted.

LAW 896 RESEARCH PROBLEMS. (2)

This is the law school's independent research course. Students must have the approval of a sponsoring professor and the Associate Dean for Academic Affairs. Forms are available on the law school's web site or from the Dean's Office. Students must present a completed prospectus about their research and a signed approval form before they will be allowed to sign up for the course. The Associate Dean will normally approve proposals submitted after the first day of class. A paper 25 pages or more in length, exclusive of footnotes, is required. This course may not be used to satisfy the Upperclass Writing Requirement.

LAW 898 ENVIRONMENTAL LAW. (3)

The role of the legal system in regulating the interrelated subsystems within the physical environment, including water and air pollution, solid waste disposal, and strip mining. Emphasis on: constitutional limitations on the public's power to implement planning proposals; relationships between federal, state and local governments; structure of agencies regulating environmental quality; standards for administrative discretion; the openness of administrative hearing procedures; and the scope of judicial review of administrative decisions. Prereq: None directly, although completion of first-year law courses is expected for second- and third-year elective courses.

***LAW 900 LAW SPECIAL COURSE. (1-4)**

Interdisciplinary, topical or experimental courses to be approved by the faculty and Dean of the College of Law. A particular course may be offered no more than twice under the LAW 900 number.

***LAW 901 SPECIAL TOPICS IN LAW.** (1-4)
Interdisciplinary, topical or experimental courses to be approved by the faculty and Dean of the College of Law. Prereq: Varies with course.

***LAW 902 SPECIAL TOPICS IN LAW.** (1-4)
Interdisciplinary, topical or experimental courses to be approved by the faculty and Dean of the College of Law. Prereq: Varies with course.

***LAW 903 SPECIAL TOPICS IN LAW.** (1-4)
Interdisciplinary, topical or experimental courses to be approved by the faculty and Dean of the College of Law. Prereq: Varies with course.

***LAW 904 SPECIAL TOPICS IN LAW.** (1-4)
Interdisciplinary, topical or experimental courses to be approved by the faculty and Dean of the College of Law. Prereq: Varies with course.

***LAW 906 SPECIAL TOPICS IN LAW.** (1-4)
Interdisciplinary, topical or experimental courses to be approved by the faculty and Dean of the College of Law. Prereq: Varies with course.

***LAW 907 SPECIAL TOPICS IN LAW.** (1-4)
Interdisciplinary, topical or experimental courses to be approved by the faculty and Dean of the College of Law. Prereq: Varies with course.

***LAW 908 SPECIAL TOPICS IN LAW.** (1-4)
Interdisciplinary, topical or experimental courses to be approved by the faculty and Dean of the College of Law. Prereq: Varies with course.

***LAW 909 SPECIAL TOPICS IN LAW.** (1-4)
Interdisciplinary, topical or experimental courses to be approved by the faculty and Dean of the College of Law. Prereq: Varies with course.

LAW 910 LABOR LAW. (3)
History, organization, and structure of American labor unions; obligations and prerogatives of employers; questions of representation; privileges and obligations of unions; collective bargaining and dispute settlement.

LAW 911 EDUCATION LAW. (3)
This course provides a comprehensive overview of the law as it impacts the American primary and secondary education system. Course topics include education as an individual right and a state duty; campus safety; student and teacher rights relating to expression, religion, and privacy; educational policy development; copyright issues; education of students with disabilities; educational funding and accountability; and other topics as they timely emerge in the ongoing public debates over education policy and law. Students planning to take the Education Law Seminar are strongly recommended to take this course first. Recommended: Constitutional Law II (LAW 822).

LAW 912 EMPLOYMENT LAW. (3)
This course surveys and examines that multitude of important legal doctrines, statutes and rules that regulate those rights and responsibilities of employers and workers which are not controlled by collectively bargained agreements. The structures for administering the more important areas of such regulation are also studied. The subject matter of this course affects most dimensions of the manner in which over three quarters of our Gross National Income is distributed. Course coverage includes: the law of individual employment contracts, special employment relations such as civil service, the employer's right to various forms of work products, the employer's responsibility for job health and safety, protection of the worker's property, worker responsibility for wrong-doing, wage-hour laws, vacation benefits, bonuses, retirement benefits, health insurance benefits, and unemployment compensation.

LAW 913 ADVANCED LEGAL RESEARCH. (2)
This two credit course is designed to assist third-year law students improve their legal research skills by introducing them to a number of research tools not covered in first-year legal research instruction. Besides exposure to legal research material, students will apply research strategies to in-class and out-of-class assignments.
Topics covered include: review of basics; secondary authority; international, foreign and transnational law; statutory and legislative history research; administrative law; tax research; securities law; environmental and criminal law; banking and labor law; family and employment law; and looseleaf, trial practice and ALR materials. These topics will be examined using traditional legal research methodology, as well as CD-ROM, INTERNET and on-line databases. Prereq: Open only to third year students.

LAW 914 PRODUCTS LIABILITY. (2-3)
This course will focus on the law of products liability. It will cover all the causes of action for products liability, negligence, strict liability, and warranty, with detailed treatment of some or all of the following issues: design defects, failure to warn, hybrid transactions, federal preemption, comparative fault and assumption of risk, negligent marketing, causation, punitive damages, toxic tort and class action litigation.

LAW 915 FAMILY LAW. (2-3)
Contracts to marry; the marriage status; annulment, divorce and separation; parent and child; infants and incompetent persons.

LAW 916 CHILDREN AND THE LAW. (2-3)
When offered for two credit hours: allocation of rights between the state and parents, management/control of minor's property, child protective services (abuse, dependency, and

neglect), status offenses, termination of parental rights, foster care, and adoption. When offered for three credit hours: allocation of rights between the state and parents, management/control of minor's property, child protective services (abuse, dependency, and neglect), status offenses, termination of parental rights, foster care, adoption, medical decision-making, education rights, and juvenile justice (transfer hearings, and sanctions).

LAW 917 ECONOMIC AND DIGNITARY TORTS. (2-3)
This course is designed to cover in depth some of the important topics of tort law that often are not covered in basic Torts. Those topics include economic torts such as tortious interference with contract and economic advantage and the economic loss rule. The major dignitary torts of Defamation and Right to Privacy are also covered.

LAW 919 IMMIGRATION LAW. (2-3)
This course is designed to examine and interpret federal immigration legislation and policy. The course will include such topics as the constitutional origins of immigration legislation, definitions of immigrant and non-immigrant categories, grounds for exclusion and/or deportation, and refugee and asylum law.

LAW 920 ADMINISTRATIVE LAW. (3)
Establishment of administrative tribunals, limits on discretion. Notice and hearing, orders, methods of judicial relief, scope of judicial review.

LAW 921 ELECTION LAW. (3)
This course looks comprehensively at the law governing the political process and democratic self-government. Topics covered include legislative redistricting, campaign financing laws, the regulation of political parties, the Voting Rights Act, and 'direct democracy' initiatives (such as binding public referendums). The course also addresses the alternative electoral structures being explored by many U.S. cities, such as proportionate representation, cumulative voting and transferable vote systems. Students interested in law, government and democratic theory are encouraged to enroll.

LAW 923 INTERNATIONAL ENVIRONMENTAL LAW. (2-3)
This course will cover sources and forms of international environmental law developing principles and international responses to global environmental problems.

LAW 924 INTERNATIONAL TRADE LAW. (3)
This is a survey course on the legal regime of the World Trade Organization ("WTO"), which stands at the center of the current international debate about "globalization." The course will examine, among other things, the legal structure of the WTO, dispute settlement, most favored nation and national treatment principles, trade in services, trade-related aspects of intellectual property rights, and linkages/conflicts between trade regulation and environmental protection, labor standards and other important areas of domestic policy. In addition, we will discuss various "hot topics" in international trade law, including the North-South divide over trade in agricultural products; national restrictions on importation of genetically modified organisms; the availability of patented pharmaceuticals in least developed countries; and "cultural" limits on trade in audiovisual products such as films, videos, and television programming.

LAW 925 INTERNATIONAL LAW. (3)
Introduction to the legal process by which interests are adjusted and decisions reached on the international scene. Treaties, the law of international organizations, the "common law" of nations and national laws with significant international ramifications are examined to determine their effect on international cooperation and coercion.

LAW 926 INTERNATIONAL BUSINESS TRANSACTIONS COURSE. (3)
This course will cover the basic legal structure regulating international trade. Topics covered include: international sales contracts, international finance, international civil litigation and arbitration (jurisdiction, choice of law, enforcement of foreign judgments and arbitration awards), tariff and non-tariff trade barriers, export licensing, international aspects of intellectual property (patents, trademarks and copyrights), regulation of foreign investment, regional trade organization with emphasis on the EEC and North American Free Trade Area and fundamentals of taxation of international transactions.

LAW 927 LEGISLATION. (3)
This course provides an introduction to legislation and the legislative process, with an emphasis on federal legislation. Among the subjects considered are theories of representation by the legislature, includes one person-one vote; legal process theory and the roles that judicial review and separation of powers play in that theory; and statutory construction, including the rules and canons of statutory construction and the use of legislative history in interpreting statutes.

LAW 928 EMPLOYEE BENEFITS LAW. (3)
This course provides a broad overview of federal law governing employee benefits. Topics covered include: origins and fundamentals of the pension system, origins of ERISA, taxation of employee benefits, fiduciary rules, and preemption. Students who take this course should have completed a basic tax course.

LAW 929 COPYRIGHT LAW. (3)
This course provides a broad understanding of most aspects of this branch of intellectual property including copyrightable subject matter, standards for protection, registration and deposit requirements, the bundle of rights, remedies, standards for infringement, defenses to infringement including fair use, and a variety of other concepts. Intellectual Property is not a prerequisite. Grades will be based on three writing projects assigned during the semester.

LAW 930 ANTITRUST LAW. (2-3)
The body of law structuring economic organization and activities in a free enterprise national system. Major matters considered in the course are government creation and regulation of the

legal monopolies, controls over collaborative conduct of competing economic entities, and legal controls over the vertical distributive relationship of suppliers, dealers, and customers.

LAW 931 STATE AND LOCAL TAXATION. (2-3)

This course provides an introduction to the fundamentals of state and local taxation. Topics covered include: property taxation, sales taxation, corporate taxation, and constitutional limitations on state and local taxation.

LAW 933 INTERNET LAW. (3)

This is a survey course on the legal regime(s) governing the Internet. In a short period of time, the Internet has assumed a prominent place in the global economy, facilitating hundreds of billions of dollars worth of business-to-business and business-to-consumer transactions annually. At the same time, the Internet has become an important means of person-to-person and intra-organizational communication. This course will focus on many of the important legal questions that have arisen as a consequence of the rapid expansion of Internet use. Topics to be covered will include jurisdiction over, and choice of law in, the electronic marketplace; cybersquatting and protection of domain names; regulation of indecent or pornographic content; protection of personal information online; electronic contracting and electronic signatures; digital piracy and protection of intellectual property on the Internet, including the Napster case and the debate about open-source software; and electronic-payment systems. Wherever possible, we will focus on international and comparative legal perspectives on the problems posed by Internet regulation.

LAW 934 PATENT LAW. (2-3)

The course in patent law covers aspects of patent procurement with particular attention directed to the statutory requirements faced by an applicant including considerations of patent eligibility of the subject matter and its utility, novelty and nonobviousness; the specification and claims including disclosure requirements of the written description, such as enablement and best mode; post-grant procedures of reissue, reexamination, and disclaimer; patent enforcement and affirmative defenses against a charge of infringement; remedies; and international prosecution and patenting.

LAW 935 INTELLECTUAL PROPERTY. (2-3)

Analysis of the various common law unfair competition areas; examination of statutory relief in areas of trademarks, copyright, and misleading advertising; survey and analysis of various portions of Federal Trade Commission Act and Robinson-Patman Act.

LAW 936 INTELLECTUAL PROPERTY TRANSACTIONS. (2 or 3)

Intellectual Property Transactions deals with legal problems in the commercialization of intellectual property. It covers, among other things, license, confidentiality agreements, and intellectual property financing. Prereq: LAW 935 or permission of the instructor.

LAW 937 INTERNATIONAL TAX. (3)

This course examines the U.S. federal income tax implications of international transactions, covering both inbound and outbound transactions. Prereq: LAW 860.

LAW 940 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 941 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 942 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 943 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 944 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 945 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 946 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 947 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 948 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 949 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 950 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 951 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 952 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 953 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 954 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 955 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 956 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 957 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 958 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 959 SEMINAR. (2)

Seminar in selected legal problems, as designated by the faculty.

LAW 960 TRIAL ADVOCACY BOARD. (1)

In the second year all students who successfully complete the intra-school competition and are asked to become a member of the Board will receive one hour of pass-fail credit at the end of the spring semester of the third year for meaningful participation in the activities of the Board, which includes national inter-school competitions and conducting the second year membership competition. Prereq: LAW 890.

LAW 961 MOOT COURT/BOARD. (1-2)

Second year competition for one hour credit. Those selected for the Moot Court Board receive an additional two hours credit in the third year. Offered on a pass/fail basis only. May be repeated to a maximum of three credits.

LAW 962 KENTUCKY LAW JOURNAL. (1-3)

This course, required of all members of the Law Journal staff, offers experience in legal writing, editing, and the process of publication of a scholarly periodical. Offered on a pass/fail basis only.

LAW 963 JOURNAL OF NATURAL RESOURCES AND ENVIRONMENTAL LAW. (3)

The course required of all members of the Journal of Natural Resources and Environmental Law, offers experience in legal writing, editing and the process of publication of a scholarly journal. Pass-fail only.

LAW 964 JUDICIAL EXTERNSHIP. (2)

Clerking for trial and appellate judges. May be repeated once with permission of the Dean. Offered on a pass/fail basis.

LAW 965 PROSECUTORIAL EXTERNSHIP. (2)

Supervised handling of criminal cases under the limited practice rule of the Kentucky Supreme Court. Instruction and practice in investigation, preparation and trial advocacy. Open to third year students only. May be repeated once with permission of the Dean. Offered on a pass/fail basis.

LAW 966 MOOT COURT NATIONAL TEAM. (2)

Participation on Moot Court National Team. National Team members should sign for this course instead of 961 in their third year.

LAW 970 U.S. ATTORNEY APPELLATE DIVISION EXTERNSHIP. (2)

The goals of this externship are to develop practical appellate litigation skills, especially appellate brief-writing skills; to give practical experience in researching legal topics; and to increase understanding of the appellate process, especially as it relates to federal government litigation and the rules of the U.S. Court of Appeals for the Sixth Circuit. Students will be supervised by attorneys in the U.S. Attorney's Office Appellate Section. Students in this externship are not required to seek admission under the student practice rules; however, students are subject to a background check by the Federal Bureau of Investigation prior to final enrollment in the course. Prereq: Status as a second- or third-year student at the College of Law.

LAW 971 DEPARTMENT OF PUBLIC ADVOCACY INNOCENCE PROJECT EXTERNSHIP. (2)

Students will work under the supervision of field instructors and mentors on investigating claims of innocence by inmates. The course includes a classroom component. Prereq: Completion of 2nd year of law school.

LAW 972 LEGAL CLINIC. (2-3)

This is a graded two or three hours practice-oriented course that provides third year students with a unique opportunity to represent low income elderly individuals on a variety of legal matters. Under the Kentucky Supreme Court's limited practice rule, and with the supervision of the clinical director, students will represent clients in negotiations with federal and state agencies, in administrative hearings or in court procedures. Students will also interview clients, draft legal documents, file pleadings, and conduct discovery.

LAW 973 CHILDREN'S LAW CENTER EXTERNSHIP. (2)

This externship develops students' litigation, counseling and research skills under the supervision of the Litigation Director of the Lexington office of the Children's Law Center, a 20-year-old foundation based in Northern Kentucky. The Center provides direct representation to children involved in high conflict custody cases, to children who are victims of sexual abuse and must be a witness in criminal proceedings, to children with disabilities in educational matters, and children who are homeless or have other dependency issues. Students will assist

their supervising attorney on these cases. Students will be expected to work at least 100 hours during the semester, in addition to classroom time discussing substantive law, roundtable discussions and case status conferences. Enrollment is limited to three students. This externship is only open to students who are eligible for admission under the limited practice rule.

LAW 974 PUBLIC DEFENDER EXTERNSHIP. (2)

The goals of this externship course are to develop practical litigation skills; to give practical experience in researching legal topics; and to increase understanding of the criminal litigation process, especially as it relates to how lawyers representing the defendants in that system develop the case, identify a strategy for litigating the case, and implement that strategy. Students will be expected to complete 100 hours of work under the supervision of the Lexington Department of Public Advocacy Directing Attorney, in addition to a classroom component taught at the College of Law. Admission under the limited practice rule is not required but is strongly encouraged; lack of admission will limit the student's ability to fully participate in externship opportunities. The expectation is that a very significant proportion of student work will be accomplished under the limited practice rule in cases before the Family Court and Juvenile Court, and in District Court misdemeanor courses. Prereq: Evidence (LAW 890).

LAW 975 UK HEALTHCARE EXTERNSHIP. (2)

Students will develop practical interviewing, counseling, strategic legal planning, litigation, and legal research skills as interns in the University of Kentucky Healthcare (University Hospital) Risk Management Office, under the supervision of the Risk Management Director. Students will be expected to complete legal research and writing projects, attend legal proceedings and hospital committee meetings, and review clinical investigations. Each student must sign a confidentiality agreement covering, among other things, compliance with all statutory requirements governing patient confidentiality, including HIPAA, and an anticipatory conflict agreement, which will include an agreement that the participant will be bound by SCR 3.130(1.9) and SCR 3.130(1.10) as if the participant were a practicing attorney at the time of the internship. Prereq: Second-semester, second-year status; Evidence (LAW 890); transfer students must have completed Torts (LAW 805). Recommended: Bioethical Issues and the Law (LAW 831), Medical Liability (LAW 832).

LAW 976 KENTUCKY ENERGY AND ENVIRONMENT CABINET EXTERNSHIP. (2)

The goals of this Externship course are to develop an understanding of legal and policy issues arising from energy development and environmental protection in Kentucky; to assess the legal implications of emerging energy strategies, including carbon sequestration from coal gasification; and to increase understanding of the role played by attorneys in the Energy and Environment Cabinet. Prereq: LAW 898 or consent of instructor.

LAW 977 CHILD ADVOCACY TODAY EXTERNSHIP. (2)

Child Advocacy Today (CAT) is operated in partnership with the Equal Access to Justice Foundation and Kentucky Children's Hospital and is located in General Pediatrics at Kentucky Clinic. CAT Externship students become part of the healthcare team at Kentucky Children's Hospital in order to assess patients' legal needs. The students engage in interviews with patients and their families, and identify legal issues that adversely affect the health of the patients. Students will then have the opportunity to assist these clients and prepare the matter for referral to outside counsel, where appropriate. Students will conduct legal research, write memos and prepare legal documents under the supervision of staff attorneys. Students will analyze and implement case strategies and prepare work plans for their cases. In addition, because the mission of the medical-legal partnership is to educate healthcare providers to recognize legal issues that are detrimental to their patients' health, students will prepare a presentation on a topic of their choice to be presented to UK's pediatrics residents. This course is limited to three students. Prereq: Third-year standing.

LAW 978 ADVANCED LEGAL CLINIC. (2-3)

Students in this advanced clinic course will continue their supervised casework from the previous semester, take on additional and more complex civil legal matters, including cases likely to go to trial, while helping the director supervise the new clinic students. Advanced clinic students will continue to develop their legal skills, improve their leadership and supervisory skills and increase their substantive and practical knowledge. Prereq: LAW 972—Legal Clinic and consent of instructor.

LAW 979 LEXINGTON CITY ATTORNEY EXTERNSHIP. (2)

This course provides the extern with an introduction to the practice of in-house counsel for a local government. The Law Department of the Urban County Government acts as counsel for the Mayor, the Urban County Council, and for all of the Urban County Government's Departments and Divisions. The department drafts all legislation (ordinances and resolutions) and handles a majority of the Urban County Government's litigation. The extern will research, analyze and write on legal issues that arise in a local government, attend court proceedings and witness meetings, participate in preparation of materials to respond to motions, briefs and appeals, and attend and participate in Urban County Government staff meetings as appropriate. Specific assignments and activities will be determined by supervising attorneys. Enrollment is upon application only; limit is two students per semester.

LAW 980 FAYETTE COUNTY ATTORNEY EXTERNSHIP. (2)

This externship develops students' interviewing, counseling, legal research and litigation skills under the supervision of the attorneys in the Fayette County Attorney's Office. Students will be expected to do legal research and writing, contact and interview witnesses, attend court sessions and assist the prosecutors therein, and assist in maintaining electronic case files. Students will support their supervising attorney in all areas related to the representation. Enrollment is open to both second- and third-year students, is upon application and interview

only, and is limited to five students per semester. Scheduling note: Although not required, students should plan to have one full morning available for externship work to accommodate court appearance schedules.

LAW 982 LONDON LAW: ENGLISH LEGAL SYSTEM. (1)

This course will provide an introduction to the history and practice of the English legal system. The course will deal with the following topics: court structure, costs and legal aid, the judiciary, criminal procedure, the legal profession, structure of the U.K. Constitution, human rights in the U.K., juries, and the doctrine of precedent.

LIN Linguistics

LIN 209 THE STRUCTURE AND USE OF ENGLISH. (3)

A general survey of the history, structure, and use of the English language. Topics investigated include: the history of the English language; elements of the structure of English; the distinctive characteristics of spoken and written English and the varied registers of English; the diversity of the English lexicon; regional and social dialects of English and their representation in literature; and the ideological dimensions of English language use, especially those relating to social and political issues and controversies. Offers UK Core credit for Intellectual Inquiry in the Humanities. Fulfills ENG pre-major requirement and ENG minor credit. (Same as ENG 209.)

LIN 210 HISTORY OF THE ENGLISH LANGUAGE. (3)

A survey of the historical development of English from its Indo-European origins to the present. Includes an investigation of the principal changes which have affected English phonology, morphology, syntax, semantics, and vocabulary, and of the ways in which these changes are reflected in contemporary English usage; and an examination of the socio-historical factors that have shaped the evolution of the English language. (Same as ENG 210.)

LIN 211 INTRODUCTION TO THE STUDY OF LANGUAGE. (3)

Designed to give students a broad introduction to the field of linguistics, the scientific study of human language. The first half of the course offers a basic foundation in the study of grammar, introducing the five core components of human grammar: syntax, morphology, phonetics, phonology and semantics. The second half of the course builds upon this knowledge by surveying a number of subfields of linguistics, including historical linguistics, sociolinguistics, language acquisition, and language and the brain.

LIN 212 INTRODUCTION TO LINGUISTICS II. (3)

This course is the second semester of a two-semester sequence introducing the study of Linguistics, the scientific study of human language as a system. This course focuses on the social aspects of linguistic study: Semantics, pragmatics, conversational interaction, language variation and register, dialects, linguistic aspects of sign languages, second language acquisition, and the acquisition of language by children. Prereq: ENG/LIN 211.

LIN 221 INTRODUCTION TO LINGUISTICS I: THEORETICAL FOUNDATIONS AND ANALYSIS. (3)

First of two courses offered in the introductory linguistics sequence, designed for majors and minors in Linguistics. Provides an intense and thorough introduction to the fundamental concepts of the field, including but not limited to: phonetics, phonology, morphology, syntax, and semantics. May be of use to students in other disciplines. Prerequisite for most 500 level LIN courses. Prereq: This course is primarily designed for Linguistics major and minor students, but it is also suitable for students pursuing a major in the following disciplines: English, Modern and Classical Languages, and Communication Science Disorders, or consent of instructor. (Same as ENG 221.)

LIN 222 INTRODUCTION TO LINGUISTICS II: LANGUAGE IN CONTEXT. (3)

Second of two courses offered in the introductory linguistics sequence, designed for majors and minors in Linguistics. Builds upon the theoretical knowledge gained in LIN 221. Intense introduction to a number of branches of linguistics including historical linguistics, pragmatics, sociolinguistics, language acquisition, psycholinguistics. May be of use to students in other disciplines. Prereq: LIN 221 or ENG 221 or approval of instructor. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

LIN 310 AMERICAN ENGLISH. (3)

The study of the varieties of modern American English: regional, social, and ethnic varieties, gender differences in communication, creoles and pidgins, stylistic variation. History and methods of American dialect study. No prerequisites. Provides ENG Major Elective credit and ENG minor credit. (Same as ENG 310.)

LIN 311 APPALACHIAN ENGLISH. (3)

The Appalachian Mountains, which range from New York to Mississippi, making up part of the landscape of 13 different states, are known to many Americans as being home to a unique cultural and linguistic experience. In this course, we will examine the extent to which this uniqueness is true, considering the nature of many myths and stereotypes that exist about this variety. We will discuss certain lexical, phonetic, syntactic, and other linguistic features that set this variety apart from other American varieties while also noting the features the speech of Appalachia shares with others. We will examine the history, origins, and development of English in Appalachia and address issues of identity, education, and standardness with respect to the English of Appalachia. (Same as ANT 341/APP 311.)

LIN 317 LANGUAGE AND SOCIETY (Subtitle required). (3)

This course will introduce students to various topics concerning the interaction between language use and social and cultural phenomena, including topics of language and cultural meaning, social segmentation and linguistic variation, bi- and multi-lingual communities, and the ethnography of communication. Course may be repeated under different subtitles to a maximum of six credits.

LIN 325 LANGUAGE AND CULTURE. (3)

This course is an introduction to linguistic anthropology. The course reviews the basic principles of linguistic analysis and examines the ways in which linguistic structures interact with and reflect cultural variation. (Same as ANT 325.)

LIN 331 LANGUAGE IN U.S. SOCIETY. (3)

This course is an introduction to the linguistic diversity of the United States and the role of language in the production and negotiation of various forms of social difference (e.g., ethnicity, gender, region, etc.). Topics include, the role of language in the formation of social identity categories, social issues related to non-standard English dialects, and multilingualism in American society. Emphasis will be given to questions of power and resistance related to language use in the contexts of government, education and business.

LIN 395 INDEPENDENT WORK. (3)

Study of special problems in linguistics under the direction of an instructor in the linguistics program. Prereq: LIN 211; major and 3.0 in linguistics or consent of instructor.

LIN 500 PHONETICS. (3)

This course examines the phonetics of natural language, including both the articulation and acoustics of speech sounds and suprasegmental units. Discussion includes extensive reference to languages other than English. Prereq: LIN 221.

LIN 505 LINGUISTIC MORPHOLOGY. (3)

This course examines word structure in natural language. It compares current theoretical approaches to the analysis of inflection, derivation, and compounding, and identifies the dimensions of typological variation in each of these domains. Discussion includes extensive reference to languages other than English. Prereq: LIN 221.

LIN 506 SOCIOLINGUISTICS. (3)

This course is an advanced survey of current areas of research in sociolinguistics. Topics include dialectology, language variation and change, interactional sociolinguistics, language and gender, bilingualism, and language contact. Prereq: LIN 221 or LIN 222 or SOC 101 or ANT 220. (Same as ANT/SOC 506.)

LIN 507 LINGUISTIC ANTHROPOLOGY. (3)

This course is an advanced survey of current areas of research in linguistic anthropology. Topics include language and thought, cultural differences in linguistic interaction, the ethnography of communication, ritual uses of language, language and identity and cultural poetics. Prereq: LIN 221 or LIN 222 or SOC 101 or ANT 220. (Same as ANT 507.)

LIN 508 DISCOURSE ANALYSIS. (3)

This course is an introduction to the methods used in various approaches to discourse and textual analysis. The approaches examined include Speech Act Theory, Conversation Analysis, Ethnographic Discourse Analysis, Discourse Pragmatics, Interactional Sociolinguistics, Variation Analysis, and Critical Discourse Analysis. Special attention is giving to practical experience analyzing both spoken and written discourse. Prereq: LIN 221 or LIN 222 or SOC 101 or ANT 220. (Same as SOC 508.)

LIN 509 FORMAL SEMANTICS. (3)

This course is an introduction to modern, model-theoretic approaches to natural language semantics. We examine a range of issues relating to the notions of meaning and truth in language; to the interface of semantics with syntax; and to the relation between semantics and pragmatics. Students attend a large number of essential lectures; participate in several discussions with their classmates; and submit several written analyses addressing specific problems in the semantics of English. Topics include the relation of denotation to truth and meaning; quantification in natural language; speech acts and illocutionary force; conversational implicature; intensional constructions; indexicality; presuppositions; uses of lambda abstraction in semantic analysis; lexical meaning; and generalized quantifiers. Prereq: LIN 221 or graduate standing.

LIN 510 CORPUS LINGUISTICS. (3)

A linguistic corpus is a collection of language samples chosen to model language use of a specific speech community and to provide primary materials for linguistic investigation. Modern digital corpora harness the quantitative power of computers for data-rich analysis in all areas of linguistic study. This course surveys the key principles of corpus linguistics and the criteria used in assembling linguistic corpora. It discusses the application of corpus-based investigations across linguistic research domains, and engages students in hands-on linguistic research using various types of corpora. Prereq: LIN 221 and LIN 222.

LIN 511 COMPUTATIONAL LINGUISTICS. (3)

Computational linguistics addresses the problem of 'information overload', the result of huge advances in processing speeds and memory size. This course shows the methods and techniques for automatically analyzing and modeling natural language data in order to redress the balance of information acquisition and information analysis, turning information into knowledge. The focus will be word-based, sentence-based and meaning-based computational approaches. Students will have the opportunity to practically apply their theoretical knowledge in a computer environment. Computer languages used will be Python and DATR, as well as some basic UNIX-based scripting languages. No experience with computers is

necessary. By the end of the course students will have acquired a host of transferable skills for an increasingly digitally dominated job market. Prereq: LIN 221.

LIN 512 ANALYSIS OF ENGLISH SYNTAX. (3)

Contemporary approaches to the syntactic analysis of Modern English; particular attention is devoted to Chomskyan syntactic theory. Prereq: LIN 221 or graduate standing. (Same as ENG 512.)

LIN 513 TEACHING ENGLISH AS A SECOND LANGUAGE. (3)

The course examines the current theories and methods of teaching English as a second language. The course will include (1) language learning theory as it relates to other disciplines; (2) methods and techniques of contrastive analysis. Prereq: One course in linguistics or consent of instructor. Provides ENG Major Elective credit and ENG minor credit. (Same as EDC/ENG 513.)

LIN 514 TESL MATERIALS AND METHODS. (3)

An extension to ENG/EDC 513, this course will include examination and evaluation of published materials designed for teaching English to speakers of other languages. Students will create individualized teaching materials and gain practical experience in applying the methods and using their own materials. Prereq: ENG/EDC 513 or consent of instructor. Provides ENG Major Elective credit and ENG minor credit. (Same as EDC/ENG 514.)

LIN 515 PHONOLOGICAL ANALYSIS. (3)

This course is an investigation of the systematic properties of speech sounds in natural languages. It compares current theoretical approaches to the analysis of individual features and sounds as well as larger prosodic units, and identifies the dimensions of typological variation in the phonological domain. Discussion includes extensive reference to languages other than English. Prereq: LIN 221. (Same as ANT 515.)

LIN 516 GRAMMATICAL TYPOLOGY. (3)

This course examines the typological classification of languages according to their morphological and syntactic characteristics. Course work includes practical training in the writing of grammatical descriptions and in the elicitation, transcription, and analysis of data from a non-Western language. Discussion includes extensive reference to languages other than English. Prereq: LIN 221. (Same as ANT 516.)

LIN 517 SPECIAL TOPICS IN LINGUISTICS (Subtitle required). (3)

The focus will be on intensive study of problems and issues that do not fall under linguistics course headings. These may have an interdisciplinary emphasis, or they may concentrate on some special topics of current research. All topics will be subject to review by the director of the program. May be repeated under different subtitle to a maximum of six credits. Prereq: LIN 221.

LIN 518 ADVANCED HISTORY OF THE ENGLISH LANGUAGE. (3)

This course explores the development of English from its roots in Indo-European, through Old, Middle, and Early Modern English(es), culminating with a review of the English languages of today. It focuses on the phonological, grammatical, and lexical changes of the language, as well as on the social contexts of the rise and spread of English as a contemporary world language. Special emphasis is given to a linguistically informed understanding of how the language has changed in response to political and historical pressures. Fulfills the ENG Early Period requirement. Provides ENG Major Elective Credit and ENG Minor credit. (Same as ENG 518.)

LIN 519 HISTORICAL LINGUISTICS. (3)

This course studies the historical development of language through time and space, examining the internal mechanisms and external influences involved in language change. Change will be examined at all levels: orthographic, phonetic, phonological, morphological, syntactic, semantic, and lexical. The course will also investigate a variety of topics related to the phenomenon of language change: language classification; comparative linguistics; the reconstruction of linguistic systems; the social context of language change. Through study of these issues, students will gain insights into historical language varieties and writing systems; relationships among the world's languages; and the origins of the sounds, words, and structures of the languages we speak today. Prereq: LIN 221 and LIN 222. (Same as ANT 519.)

LIN 520 SANSKRIT I. (3)

An introduction to the Sanskrit language. Includes a historical survey of the language; detailed study of the devanagari writing system and of Sanskrit phonology and grammar; a recitation component; and the reading of selected Sanskrit texts. Prereq: Completion of the fourth semester of a foreign language.

LIN 521 SANSKRIT II. (3)

A continuation of LIN 520. Includes intensive study of the relationship of Sanskrit to other early Indic languages (especially Vedic and Pali); discussion of the Indo-European ancestry of these languages; and the reading of selected texts in these languages. Prereq: LIN 520.

LIN 527 LANGUAGE INVESTIGATIONS (Subtitle required). (3)

This course presents a focused investigation of an individual language or a set of languages (in a language family or other defined grouping, e.g., connected by geopolitical area), examining genetic and typological features of the language(s) from a structural, historical, and/or sociolinguistic perspective. The course may be taken twice for up to six (6) credits under different subtitles. Prereq: LIN 221 and LIN 222, or consent of instructor.

LIN 529 LANGUAGE CONTACT. (3)

This course provides a linguistic investigation of language contact, the interaction of two or more languages in situations of individual or community bilingualism/multilingualism. The full range of linguistic contact phenomena will be illustrated with examples from different languages, both historically and in the present day. We will discuss the outcomes of language contact –

language maintenance (borrowing, code-switching, multilingualism), language shift (endangered languages, language death), and the creation of new languages (pidgins, creoles, mixed languages) – in a range of contexts, considering both the social factors in language contact and the effects of contact on the linguistic structure of the languages involved. Prereq: LIN 221 and LIN 222, or consent of instructor.

#LIN 530 PRAGMATICS. (3)

Survey of linguistic pragmatics, including Gricean implicature, reference, presupposition, speech acts, information structure, and the representation of discourse. Discussion focuses primarily but not exclusively on the English language. This course may require LIN 540 taken concurrently. Prereq: LIN 221 or permission of the instructor; may require LIN 540 taken concurrently

#LIN 540 LABORATORY IN LINGUISTICS (Subtitle required). (1)

A laboratory course offering students the opportunity for hands-on application of the general theories and methods of linguistics at the level of advanced undergraduate/beginning graduate training. The lab environment will generally involve both individual and small group work, developing both independent research skills and an ability to engage in collaborative linguistic investigation. May be repeated for credit under different topics. Prereq: LIN 221 or consent of instructor; may require concurrent enrollment in an accompanying LIN lecture course.

LIN 550 LINGUISTIC FIELD METHODS. (3)

This course is an introduction to field methods for grammatical description. Working with a native speaker of an unfamiliar language, students will gain experience in eliciting and analyzing data in descriptive linguistics. We will consider general issues related to fieldwork, including choosing a field site and consultants, software for linguistic archiving and analysis, as well as the psychological, ethical, and practical considerations related to fieldwork. The bulk of the course, however, will focus on practical experience in describing the phonetics, phonology, morphology, and syntax of an unfamiliar language. LIN 540 must be taken concurrently. Prereq: LIN 221 or graduate standing in Linguistics; requires LIN 540 taken concurrently.

LIN 600 ADVANCED PHONETICS. (3)

This course presents advanced study of linguistic phonetics, building on the material presented in LIN 500 (Linguistic Phonetics). The course will emphasize current questions in phonetic theory and experimental methods. Students will develop skills in using experimental and analytical techniques for conducting research that is relevant to current theoretical questions. This course requires concurrent enrollment in LIN 640 Advanced Laboratory in Linguistics: Phonetics. Prereq: LIN 500 (Linguistic Phonetics) or similar course approved by the Director of Graduate Studies. LIN 640 Advanced Laboratory in Linguistics: Phonetics must be taken concurrently.

LIN 601 RESEARCH METHODS IN LINGUISTICS. (3)

Students pursuing an MA degree in Linguistic Theory & Typology (MALTT) must be equipped with a toolbox of suitable methods for gathering, analyzing, and modeling linguistic data. This course introduces a range of research methods which are widely applicable in scientific investigation but whose linguistic relevance we shall emphasize here. The methods are (1) statistical analysis, (2) computational modeling, (3) field work and (4) experimental techniques. Overarching all these methods is the scientific method of enquiry, a recursive and cumulative process of gathering data and building, testing, and refining hypotheses, and interpreting all results. Some of the questions that students will learn how to answer are: Are my data collection methods sufficiently rigorous? Are the results of my data analysis statistically significant? Does my hypothesis control for variables? Is my hypothesis computationally tractable? Are my methods and their results replicable? The course also introduces students to major primary and secondary resources for linguistic research, including the principal bibliographic and indexing services, leading professional journals, major disciplinary organizations, significant traditional and online collections of linguistic data, etc. These resources will be discussed for each of the disciplinary strengths represented in the MALTT program. Prereq: LIN 211 or equivalent.

LIN 605 ADVANCED MORPHOLOGY. (3)

Advanced morphology builds on the groundwork laid in LIN 505 (Linguistic Morphology). The focus shifts from fundamentals of morphology to theoretical morphology. Special emphasis is given to the inferential-realizational approach and centrality of the paradigm. The course will address issues such as the nature of rules in morphology, morphology's place in the grammar and 'challenging' morphology, examples of which include deponency, syncretism, heteroclisis, periphrasis and defectiveness. Prereq: LIN/ENG 505 or a similar course approved by the Linguistics Program director or DGS.

LIN 606 ADVANCED SOCIOLINGUISTICS. (3)

Building upon the solid foundation in the broad principles of sociolinguistic inquiry developed in LIN/ANT/SOC 506, this course explores current theoretical debates in sociolinguistics by introducing a series of alternative frameworks, which may include paradigms like traditional Labovian sociolinguistics or the exploration of sociolinguistic concepts in social theory, and students will be responsible for assessing and critiquing each framework as presented. This course may require LIN 640 taken concurrently. Prereq: LIN/ANT/SOC 506 (Sociolinguistics) or similar course approved by the Director of Graduate Studies; may require LIN 640 taken concurrently.

LIN 609 ADVANCED SEMANTICS. (3)

This course is an examination of current research in linguistic semantics. The course covers a range of central topics, including the syntax/semantics interface and the nature of semantic compositionality; the semantic analysis of specific linguistic phenomena, such as plural number, generics, valence-changing operations, reflexives and reciprocals, modality, counterfactual

conditionals; referential vs cognitive approaches to semantics; and modern approaches to the relation between semantics and pragmatics. Prereq: LIN 509 (Formal Semantics) or similar course approved by Director of Graduate Studies; may require LIN 640 taken concurrently.

LIN 610 ADVANCED COMPUTATIONAL/ CORPUS LINGUISTICS. (3)

Building on the theoretical, conceptual, and methodological overview of computational and corpus linguistics presented in LIN 510 (Corpus Linguistics) and LIN 511 (Computational Linguistics), this course engages students in advanced applications of computational and corpus theories, concepts, and methods in the study of human language. Topics explored may include one or more of the following: specialized computational/corpus approaches for specific linguistic subfields; frameworks for simulation, modeling, annotation/encoding of linguistic data; processing and analysis of digital multimodal linguistic resources. This course requires concurrent enrollment in LIN 640 Advanced Laboratory in Linguistics: Computational/Corpus Linguistics. Prereq: LIN 510 (Corpus Linguistics) or LIN 511 (Computational Linguistics) or similar course approved by the Director of Graduate Studies. LIN 640 Advanced Laboratory in Linguistics: Computational/Corpus Linguistics must be taken concurrently.

LIN 611 QUANTITATIVE METHODS IN LINGUISTICS. (3)

An increasingly important method in linguistic research relies on measuring some quantity, and inferring some linguistic reality based on such findings. This course presents scenarios where such an approach makes sense, and outlines the appropriate measures and the safest, most reliable ways in which such measures can be used to draw inferences. This course requires concurrent enrollment in LIN 640 Advanced Laboratory in Linguistics: Quantitative Methods. Prereq: LIN 601 (Research Methods in Linguistics) or similar course approved by the Director of Graduate Studies. LIN 640 Advanced Laboratory in Linguistics: Quantitative Methods must be taken concurrently.

LIN 612 STRUCTURE AND STYLISTICS OF FRENCH. (3)

A study of the history and structure of French with an emphasis on contemporary features. (Same as ENG/FR 612.)

LIN 615 ADVANCED PHONOLOGY. (3)

This course provides an introduction to current constraint-based theoretical approaches within phonology, emphasizing Optimality Theoretic approaches. Within this framework students will analyze individual features, sounds and prosodic units, all within problem sets conducted in class and at home. This course may require LIN 640 taken concurrently. Prereq: LIN 515 (Phonological Analysis) or similar course approved by Director of Graduate Studies; may require LIN 640 taken concurrently.

LIN 617 ADVANCED TOPICS IN LINGUISTICS. (3)

Advanced investigation into a designated topic in linguistic theory and typology. May be repeated to a maximum of twelve credits under different subtitles. Prereq: A course in a cognate field at the LIN 500 level or equivalent, or by discretion of the DGS.

LIN 619 HISTORICAL SOCIOLINGUISTICS. (3)

This course investigates language variation and change in its socio-historical context, focusing on the effects of such parameters as age, gender, education, social class, and region on the historical development of language through time and space. The effects of socio-historical variables will be examined at all levels of historical language variation and change: orthographic, phonetic, phonological, morphological, syntactic, semantic, and lexical. The notions of "standard language" and "language standardization" will also be addressed from a historical sociolinguistic perspective. Prereq: LIN 221 and LIN 222 or equivalent, or consent of instructor, (LIN 506 and 519 recommended).

LIN 622 ADVANCED SYNTAX. (3)

The course builds on the groundwork laid in LIN 512 Analysis of English Syntax in two main ways: (1) by framing the problems introduced in the first course within a non-Chomskyan framework of assumptions found in constraint-based lexicalist grammars; and (2) by going beyond the confines of English to account for syntactic data from other languages. A fundamental shift from Chomskyan to constraint-based lexicalist grammar is the rejection of syntactic derivation, or transformations, i.e. the assumption that there are distinct underlying and surface representations in which arena transformations / movement play a significant role. Topics covered include: formal grammar as unification grammar, headedness, binding theory, agreement, and the role of the lexicon in determining syntactic structure. This course may require LIN 640 taken concurrently. Prereq: LIN/ENG 512 (Analysis of English Syntax) or similar course approved by the Director of Graduate Studies; may require LIN 640 taken concurrently.

LIN 629 ADVANCED HISTORICAL LINGUISTICS. (3)

This course takes as its starting point the theoretical and conceptual overview of historical linguistics presented in LIN 519 (and similar theoretical introductions to historical linguistics). Building on that foundation, we engage in advanced investigations in the study of language history. Topics taught in this course may include one or more of the following: specific focus on historical phonology, morphology, and/or syntax; application of specific theoretical frameworks to the study of historical language change; examination of quantitative and computational approaches to historical linguistic research; analysis of correlations between historical linguistic data and data from other fields (archeology, anthropology, genetics, etc.). Prereq: LIN 519 or consent of instructor.

LIN 640 ADVANCED LABORATORY IN LINGUISTICS (Subtitle required). (1)

An advanced laboratory course offering students the opportunity for hands-on application of specialized theories and methods at the advanced level of graduate training in linguistic research. The lab environment will generally involve both individual and small group work, developing

Course Descriptions

both independent research skills and an ability to engage in collaborative linguistic investigation. May be repeated to a maximum of ten credits. Prereq: LIN 601 or permission of the Director of Graduate Studies; may require concurrent enrollment in an accompanying LIN lecture course.

LIN 695 DIRECTED STUDIES IN LINGUISTICS. (1-3)

This course allows students to undertake study of special topics in linguistics under faculty supervision. May be repeated to a maximum of six credits. Prereq: LIN 601 or permission of the instructor; a previous course at or above the 500 level in the relevant subdiscipline of linguistics is recommended. LIN 695 may not be entirely devoted to content that is regularly taught in another LIN course.

LIN 700 ADVANCED SEMINAR IN PHONETICS (Subtitle required). (3)

This course is a seminar allowing advanced graduate students to pursue original research in linguistic phonetics. Each student will investigate a specific question or issue in the field phonetics: s/he will assign readings related to that topic and will lead discussions of those readings with other seminar participants. (I will likewise assign some readings and lead discussions of them.) Each student will conduct original research on the specific topic that s/he has chosen; this research will culminate in both a written paper and an in-class presentation of her/his findings, analyses and conclusions. The research may be documentary, experimental or computational in nature. May be repeated under different subtitles to a maximum of 6 credits. This course may require LIN 740 taken concurrently. Prereq: LIN 600 (Advanced Phonetics) or similar course approved by Director of Graduate Studies; may require LIN 740 taken concurrently.

LIN 701 RESEARCH SEMINAR IN LINGUISTIC THEORY AND TYPOLOGY. (3)

Students are trained in research and professionalization related to the discipline of linguistics. To that end students will create a 20-30 page research report as a culmination of a set of training milestones that include (1) producing an annotated bibliography, (2) writing an abstract, (3) reflecting on good practice in linguistics research, (4) publicly presenting research, and (5) reflecting on professional aspects of linguistics. Prereq: Second-year standing in the MA program in Linguistic Theory & Typology, LIN 601.

LIN 705 ADVANCED SEMINAR IN MORPHOLOGY (Subtitle required). (3)

Seminar in special topics in linguistic morphology; examples of prospective topics include: morphotactics, morphological complexity, morphological interfaces, paradigm-based morphology. May be repeated under different subtitles to a maximum of six credits. This course may require LIN 740 taken concurrently. Prereq: LIN 605 (Advanced Morphology) or similar course approved by the Director of Graduate Studies; may require LIN 740 taken concurrently.

LIN 706 ADVANCED SEMINAR IN SOCIOLINGUISTICS (Subtitle required). (3)

Advanced seminar in special topics in sociolinguistics; examples of prospective topics include: dialectology, world Englishes, sociophonetics, contact phenomena, historical sociolinguistics, and language and identity. May be repeated under different subtitles to a maximum of six credits. This course may require LIN 740 taken concurrently. Prereq: LIN 606 (Advanced Sociolinguistics) or similar course approved by the Director of Graduate Studies; may require LIN 740 taken concurrently.

LIN 709 ADVANCED SEMINAR IN SEMANTICS AND PRAGMATICS (Subtitle required). (3)

Advanced seminar in special topics in the semantics and pragmatics of natural languages; examples of prospective topics include: quantification, generic sentences, temporal semantics, conditionals, conventional implicature, anaphora. May be repeated under different subtitles to a maximum of six credits. This course may require LIN 740 taken concurrently. Prereq: LIN 609 (Advanced Semantics) or similar course approved by the Director of Graduate Studies; may require LIN 740 taken concurrently.

LIN 710 ADVANCED SEMINAR IN COMPUTATIONAL/ CORPUS LINGUISTICS (Subtitle required). (3)

Advanced seminar in special topics in computational and corpus approaches to the study of language; examples of prospective topics include: data visualization, computational simulation and modeling, advanced corpus construction and analysis. May be repeated under different subtitles to a maximum of six credits. This course may require LIN 740 taken concurrently. Prereq: LIN 610 (Advanced Computational/Corpus Linguistics) or similar course approved by the Director of Graduate Studies; may require LIN 740 taken concurrently.

LIN 712 ADVANCED SEMINAR IN SYNTAX (Subtitle required). (3)

Advanced seminar in special topics in syntax: Examples of prospective topics include ellipsis and anaphora, the dative alternation, comparatives, island constraints, etc. May be repeated under different subtitles to a maximum of 6 credits. This course may require LIN 740 taken concurrently. Prereq: LIN 612 (Advanced Syntax) or similar course approved by Director of Graduate Studies; may require LIN 740 taken concurrently.

LIN 715 ADVANCED SEMINAR IN PHONOLOGY (Subtitle required). (3)

Advanced seminar in special topics in phonology; examples of prospective topics include: prosodic categories, historical phonology, syllable structure, mergers and neutralization, coarticulation, etc. May be repeated under different subtitles to a maximum of six credits. This course may require LIN 740 taken concurrently. Prereq: LIN 615 (Advanced Phonology) or similar course approved by the Director of Graduate Studies; may require LIN 740 taken concurrently.

LIN 719 ADVANCED SEMINAR IN HISTORICAL LINGUISTICS (Subtitle required). (3)

Advanced seminar in special topics in historical linguistics; examples of prospective topics include: historical phonology; grammaticalization; analogical change; the evolution of alignment systems; language contact and language change; quantitative and computational approaches; deep reconstruction; language families and distant genetic relationship; universals of language change. May be repeated under different subtitles to a maximum of six credits. This course may require LIN 740 taken concurrently. Prereq: LIN 629 (Advanced Historical Linguistics) or similar course approved by the Director of Graduate Studies; may require LIN 740 taken concurrently.

LIN 740 LABORATORY FOR ADVANCED LINGUISTICS SEMINARS. (1)

A laboratory course tied directly to an advanced seminar in linguistics at the 700 level, offering students the opportunity for guided application of the advanced theories and methods focused on in the seminar. The lab will provide an environment for individualized work with tools specific to each student's research question (within the framework of the seminar), while at the same time encouraging collaborative investigation and shared discovery. May be repeated to a maximum of five credits. Prereq: Concurrent enrollment in the accompanying LIN 700-level advanced seminar course.

LIN 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work towards the degree must be completed.

LIS Library and Information Science

LIS 510 CHILDREN'S LITERATURE AND RELATED MATERIALS. (3)

A survey of children's literature, traditional and modern. Reading and evaluation of books with multimedia materials with emphasis on the needs and interests of children. Covers media for use by and with children from preschool through grade six.

LIS 514 LITERATURE AND RELATED MEDIA FOR YOUNG ADULTS. (3)

A study of literature and related materials for use with young people in grades 6-12. Emphasis is placed on the special characteristics and needs of young people and the evaluation of materials for this age group. (Same as EDC 504.)

***LIS 600 INFORMATION IN SOCIETY. (3)**

Students investigate the Information Society and its relationships with our world including the impact on information organizations and communities. Students focus on the discipline's ethics, values, and core concepts.

***LIS 601 INFORMATION SEARCH. (3)**

Within given theoretical contexts, students search and retrieve organized information. Students learn to construct, apply, and critically evaluate advanced information search and retrieval strategies.

***LIS 602 KNOWLEDGE ORGANIZATION. (3)**

Students describe and classify recorded knowledge and learn fundamental principles and practices that facilitate access and retrieval.

***LIS 603 MANAGEMENT IN INFORMATION ORGANIZATIONS. (3)**

Students learn and apply the basic elements of management and leadership within the context of information organizations.

LIS 604 LIBRARY AND BOOK HISTORY. (3)

Development of libraries and books from earliest time to the present with special reference to their relationship to contemporary social, economic, cultural and political trends. Emphasis is given to American library and book history.

LIS 605 INFORMATION POLICY AND TECHNOLOGY REGULATION. (3)

This course explores the socio-cultural, economic and political issues confronting communication and information professionals and the transformative impact of these issues on information policy development. The rapidly evolving communication and information infrastructure and the global shift to an information society will provide the context for the course. Within this context, emphasis will be placed on issues of access, which includes, universal service, intellectual freedom, intellectual property rights, privacy, security, advocacy, equity, and the role of library and information professionals and organizations in policy formulation.

LIS 608 METHODS OF RESEARCH IN LIBRARY AND INFORMATION SCIENCE. (3)

Basic tools, techniques and methods of research. Consideration is given to the role and purpose of research in library and information science and its relationship to research in other disciplines. Includes critical evaluation of current research in library and information science and the development of a research proposal. Prereq: LIS 601, LIS 602 or consent of instructor.

LIS 609 CURRENT PROBLEMS IN LIBRARY AND INFORMATION SCIENCE. (3)

A seminar which examines current philosophical and managerial issues in library and information science. Focus is on the analysis, origins, evaluation and current status of these issues. Prereq: Eighteen hours of graduate study in LIS or consent of instructor.

LIS 610 LIBRARY MATERIALS AND LITERATURE FOR CHILDREN. (3)

A survey and historical study of library materials and literature for children up to grade 6. Students will engage in extensive reading, and in the evaluation of books and some multimedia materials. Basic programming will be explored.

LIS 611 CRITICAL ANALYSIS OF CHILDREN'S LITERATURE. (3)

Advanced study of book evaluation, literary criticism, children's book publishing, awards, and current trends in the field. Individual projects require extensive critical reading. Prereq: LIS 610 or LIS 614 or consent of instructor.

LIS 612 YOUTH LITERATURE FOR A DIVERSE SOCIETY. (3)

A survey and historical study of culturally diverse literature for youth of all ages. Students will engage in extensive reading, evaluation, and discussion of literature and the issues related to developing an understanding of various cultures and special populations within the United States. Prereq: LIS 610: Library Materials and Literature for Children (or comparable).

LIS 613 INFORMATION RESOURCES AND SERVICES FOR CHILDREN. (3)

A study of effective programming for children and young adults. Emphasis is placed on oral presentations. Literature-based activities and community outreach.

LIS 614 LIBRARY MATERIALS AND LITERATURE FOR YOUNG ADULTS. (3)

A study of literature and related materials for use with young people in grades 7-12. Emphasis is placed on the special characteristics and needs of young adults and the evaluation of materials for this age group.

LIS 621 INFORMATION RESOURCES AND SERVICES. (3)

This course provides an introduction to the theory and practice of information services, which are defined broadly as the activities in which information professionals engage to connect people to the information they need, including information needs assessment, direct information provision, information literacy instruction, and intermediation for all stages of the information search process. Emphasis is placed on the roles played by information professionals to help diverse users define and negotiate their information needs, navigate user-system interfaces, formulate effective search strategies for information retrieval, and evaluate and select information. Attention is also given to the skills necessary to plan for, implement, and evaluate the delivery of information services in a wide variety of organizational contexts. The ethical foundations of information services are also considered. Prereq: LIS 601.

LIS 622 SOCIAL SCIENCE INFORMATION. (3)

Examination of important issues and developments relating to creation, packaging, dissemination and use of social science information by various segments of society. Emphasis on understanding information needs of those who use social science information and information systems, source and services available to satisfy those needs. Prereq: LIS 601 or consent of instructor.

LIS 623 ADVANCED REFERENCE SERVICES. (3)

This course provides advanced study of the theory and practice of information services, which are defined broadly as the activities in which information professionals engage to connect people to the information they need, including information needs assessment, direct information provision, information literacy instruction, and intermediation for all stages of the information search process. Emphasis is placed on the structure of information, information seeking, and information sources within disciplines. Students will be prepared to help advanced users define and negotiate their information needs, navigate user-system interfaces, formulate effective search strategies for information retrieval, and evaluate and select information. Ethical issues in information services are also considered. Prereq: LIS 601, LIS 622.

LIS 624 INFORMATION IN SCIENCE AND TECHNOLOGY. (3)

The content and structure of bibliographic and other information resources in science and technology. A consideration of formal and informal communication in science and technology with emphasis on sources and services in agriculture, astronomy, biology, chemistry, mathematics, natural resources, zoology, and other closely related subjects. Prereq: LIS 601 and LIS 602 or consent of instructor.

LIS 625 INFORMATION LITERACY INSTRUCTION. (3)

This course examines the theory and practice of instruction provided in information organizations to develop clients' abilities to effectively locate, evaluate, select and use information. Attention is given to the nature of information literacy, systematic instructional design, needs assessment, methods of instruction, teaching and learning preferences, and the evaluation of learning and programs. This course is interdisciplinary and draws on theory from Library & Information Science, Instructional Communication, Education and Cognitive Psychology. We will examine and criticize various instructional models, plan for and deliver instruction in both in-person and computer-aided venues, learn various methods for assessing teaching and learning, and discuss the managerial and political aspects of instructional delivery in various information agency contexts, with a special emphasis on those in academic settings. Prereq: LIS 601 or consent of instructor.

LIS 626 ELECTRONIC INFORMATION RESOURCES IN THE HEALTH SCIENCES. (3)

Survey of electronic information resources in the health sciences, including databases and Web sources. Discussion of relevant controlled vocabularies and their use in formulating and executing search strategies. The course also includes an evidence based health care component whereby students learn to analyze critically the biomedical literature and determine reference and research relevancy. (Same as ICT 626.)

LIS 627 CONSUMER HEALTH INFORMATION RESOURCES. (3)

History and development of consumer health information resources; role of professional and governmental agencies in provision of consumer health information; policy issues related to provision of consumer health information. Consumer health professional literature, user information needs, user resources, and information services. Identification, selection, utilization, and evaluation of consumer health information for special populations within specialized educational and healthcare settings. Trends and issues in consumer health informatics. (Same as ICT 627.)

LIS 629 INTRODUCTION TO MEDICAL INFORMATICS. (3)

This course is designed to introduce the interdisciplinary field of medical informatics to health information professionals. Medical Informatics is a developing field that essentially seeks to apply information and computing technologies to improve all aspects of healthcare, including patient care, research, and education. During the semester we will explore a number of topics central to understanding the field, including: the nature of biomedical information, the electronic medical record, the role of information and computing technologies to support clinical decision making, healthcare and informatics standards, information retrieval, system analysis and technology assessment, and essential issues of information technology in medical education and medical ethics. By the end of this Web-based course, students are expected to be able to understand broad aspects of the field and can use this as a foundation for further education, training, and work in health information professions. (Same as CJT 629.)

LIS 630 INFORMATION RETRIEVAL. (3)

This course reviews important information retrieval (IR) theories and models; explores a brief history of IR research; and examines various IR applications. Students will get familiar with IR foundations such as document indexing or query expansion/optimization strategies, as well as understand overall system architectures for selected IR applications. Students will explore how to analyze and compare IR systems, how to select the best IR systems for particular tasks and how to design a prototype for an efficient IR system. Prereq or concur: LIS 636 or LIS 637 or LIS 638. (Same as ICT 630.)

LIS 634 INFORMATION ARCHITECTURE. (3)

The course introduces the concepts and practices of information architectures (IA) for a Web site within the context of the organization it serves. It aims to acquaint students with principles and process of information architecture for user-centered design of websites. It also provides students the opportunity to develop practical skills related to the design of information organization and navigation systems. The course prepares students for the companion technical course of "content management systems" where they will apply the theories and techniques studied in this course to the implementation of a fully functional website.

LIS 636 FOUNDATIONS OF INFORMATION TECHNOLOGY. (3)

A study of the computing fundamentals necessary for the understanding and use of information technology. Focus is on examining computer systems in concept and practice, which is essential to information professionals. Topics include how computers represent, process, store and retrieve information; how operating systems control these processes, interpret commands, present the user interface, and run applications; how databases are designed and created; how general understanding of programming processes and productivity software skills is important in a variety of professional contexts. Productivity applications include the Office suite, Internet applications and web publishing, and database management systems.

LIS 637 INFORMATION TECHNOLOGY. (3)

Study of computer and communication technology used in modern information storage and retrieval systems. Consideration also given to managing microcomputer services, hardware evaluation and selection, and system security. Prereq: Consent of instructor. (Same as CJT 637.)

LIS 638 INTERNET TECHNOLOGIES AND INFORMATION SERVICES. (3)

A course examining the structure, development and evolution of the Internet; network protocols and client/server architecture issues; Web page design, authoring, and evaluation; the use of the Internet as an information storage and retrieval system; recent advances in HTML and scripting languages; and Internet related social issues such as censorship and copyright. Prereq: LIS 636 or consent of instructor. (Same as CJT 638.)

LIS 640 HEALTH INFORMATION RESOURCE SERVICES. (3)

A survey of information agencies and health science libraries, including topics related to: the healthcare community and their information needs, information resources in the health sciences, controlled medical terminologies and classification systems, search and retrieval of information resources, issues in the management of collections and access to health libraries. (Same as CJT/ICT 640.)

LIS 641 LAW LIBRARIANSHIP. (3)

A study of the materials of legal research and reference work. Emphasis is placed on the methods of effective research and the actual use of legal materials in the solution of practical reference problems. The selection, cataloging, classification, and storage of materials in a law collection are considered. The specialized requirements of law librarianship and law library administration are treated. Prereq: LIS 601 and LIS 602 or consent of instructor.

LIS 642 ORAL HISTORY. (3)

This course is an introduction to oral history as a research methodology and its role in library and archives collections. It is designed for persons intending to conduct oral history interviews to expand library and archival collections. It is also for persons responsible for the archival management of oral history collections. The course examines how oral history projects are initiated, how projects are administered, how interviews are conducted, and how oral history

interviews are preserved and made available to researchers. The course will also explore the use of technology in making oral histories available to researchers on the Web. Students will gain practical experience in oral history interviewing and related aspects of oral history, such as transcribing, editing, and publishing oral histories. Taught essentially same as EPE 669.

LIS 643 ARCHIVES AND MANUSCRIPTS MANAGEMENT. (3)

This course is designed to cover the management, care, and servicing of manuscript and archival material. Attention will also be given to criteria for building an archival/manuscript collection in a repository and to the description and interpretation of its holdings in guides and catalogs for the use of researchers. Prereq: LIS 602 or consent of instructor.

LIS 644 ADMINISTRATION OF SCHOOL LIBRARY MEDIA CENTERS. (3)

Examines the philosophy behind current national and state guidelines for library media programs and addresses the roles of library media professionals in program and resource management in the K-12 school setting. Students will work on their individual exit portfolios and plan a practicum experience to meet requirements for performance-based certification by the Kentucky Department of Education.

LIS 645 PUBLIC LIBRARIES. (3)

Examines historical development of the public library and its roles in society. Topics considered include the environment of public libraries; organization and management; information needs of client groups; information resources and services provided to clients; and trends developments in public libraries. Prereq: LIS 601 and LIS 602 or consent of instructor.

LIS 646 ACADEMIC LIBRARIES. (3)

Examines historical development of academic libraries and their roles in higher education. Topics considered include the environment of academic libraries, organization and management needs of client groups, information resources and services provided clients; and issues, trends, and developments in academic libraries. Prereq: LIS 601 and LIS 602 or consent of instructor.

LIS 647 CURRENT TRENDS IN SCHOOL MEDIA CENTERS. (3)

An intensive study of trends in school media centers with emphasis on research, technology, and the role of the school media specialist in the school curriculum.

LIS 648 TECHNOLOGY IN THE SCHOOL MEDIA CENTER. (3)

Consideration of new and emerging educational technologies that could be integrated into school curriculum. Includes hands-on experiences as well as critical reading and discussion on current issues relating to educational technology and the role of the media specialist in technology integration.

LIS 650 TECHNICAL PROCESSING SYSTEMS. (3)

A survey of manual and computer-based technical processing systems in libraries. Consideration given to circulation, acquisitions, cataloging and serial control systems. Trends and developments in technical processing, files and records management, and technical processing procedures and activities are examined. Prereq: LIS 602 or consent of instructor.

LIS 655 ORGANIZATION OF KNOWLEDGE I. (3)

Theories and practice of bibliographic description and subject analysis. Covers the organization of both print and electronic information, including use of Anglo-American Cataloging Rules, Dewey Decimal Classification, Library of Congress Classification and Library of Congress Subject Headings. Prereq: LIS 602 or consent of instructor.

LIS 656 ORGANIZATION OF KNOWLEDGE II. (3)

In-depth coverage of the theories and practice of bibliographic description and subject analysis. Covers the organization of both print and electronic information and authority control. Emphasis is on problems in practice, special case studies, current issues and future trends of description, subject analysis and online authority control. Prereq: LIS 655, or consent of instructor

LIS 658 KNOWLEDGE MANAGEMENT. (3)

Organizational knowledge is a valuable strategic asset. Knowledge management refers to the systematic management of an organization's knowledge assets so that they can be leveraged for sustainable advantage. This course examines how knowledge is created, captured, organized, diffused, and implemented in an organization. Topics covered include knowledge management processes and practices, corresponding technologies, collaboration tools, and people and cultural issues. (Same as ICT 658.)

LIS 659 COLLECTION DEVELOPMENT. (3)

Intellectual and administrative aspects of building, maintaining and evaluating library collections. Topics include: library cooperation; national standards; the writing and implementation of collection policies; strategies of selection and evaluation; contemporary publishing and the book trade.

LIS 661 INTRODUCTION TO DATA SCIENCE. (3)

This course will provide a foundation in the area of data science based on data curation and statistical analysis. The primary goal of this course is for students to learn data analysis concepts and techniques that facilitate making decisions from a rich data set. Students will investigate data concepts, metadata creation and interpretation, general linear method, cluster analysis, and basics of information visualization. At the beginning, this course will introduce fundamentals about data and data standards and methods for organizing, curating, and preserving data for reuse. Then, we will focus on the inferential statistics: drawing conclusions and making decisions from data. This course will help students understand how to use data analysis tools, and especially, provide an opportunity to utilize an open source data analysis tool, R, for data manipulation, analysis, and visualization. Finally, in this course we will discuss

diverse issues around data including technologies, behaviors, organizations, policies, and society. (Same as ICT 661.)

LIS 665 INTRODUCTION TO DIGITAL LIBRARIES. (3)

This course focuses on the theoretical, technological, human factors and evaluative components of digital library (DL) research and practice. Students will read and discuss literature on DLs, review existing technologies and proof-of-concepts implementation projects, and work as a group to develop a prototype but operational DL. This course is foundational for students wishing to engage seriously in the world of digital librarianship. Prereq: LIS 602, LIS 636.

***LIS 668 DATABASE MANAGEMENT. (3)**

This course is designed as a first database course for students without any previous experience. The general aim of the course is to understand the basic concepts, principles, and hands-on experiences on database systems. The course will evolve from understanding, visualizing, and analyzing data. Then transition to understanding relational databases by designing and building databases using Access and querying using Structured Query Language (SQL). Prereq: LIS 636 or permission of instructor. (Same as CJT 668.)

LIS 672 PRACTICUM. (3)

Practicum in a library or other information-related organization. Student assumes entry level professional duties and responsibilities in an operational setting under the close supervision of an information professional. Requires minimum of 140 hours of experiential learning, and the completion of a multimedia presentation/portfolio under the direction of the course coordinator. Prereq: Completion of 18 hours of graduate work in library and information science and consent of course coordinator.

LIS 676 SCHOOL MEDIA PRACTICUM. (1-12)

Supervised experience at the elementary and secondary levels in school library media centers. Required for students seeking certification as school/media librarians in Kentucky. Experience will be under the joint supervision of college faculty and cooperating media librarians. Prereq: Admission to Teacher Education Program and consent of instructor.

LIS 690 SPECIAL TOPICS IN LIBRARY AND INFORMATION SCIENCE. (3)

Intensive study of one aspect of library and information science under the leadership of an authority in the area. (Same as ICT 690.)

LIS 695 INDEPENDENT STUDY IN LIBRARY AND INFORMATION SCIENCE. (3)

Opportunities for directed study in subjects or problems of interest to a student. Observation and research required, and a written report describing the work accomplished. Prereq: Consent of instructor.

LIS 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

LIS 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

MA Mathematics

MA 108R INTERMEDIATE ALGEBRA. (3)

This course is remedial in nature and covers material commonly found in second year high school algebra. Specific topics to be discussed include numbers, fractions, algebraic expression, simplifying, factoring, laws of exponents, linear equations, simple graphs and polynomial algebra. This course is not available for degree credit toward a bachelor's degree. Credit not available on the basis of special examination. Prereq: One year of high school algebra. Recommended for students with a Math ACT score of 18 or less, or consent of department.

***MA 109 COLLEGE ALGEBRA. (3)**

Selected topics in algebra. Develops manipulative algebraic skills and mathematical reasoning required for further study in mathematics and use in mathematical modeling. Includes brief review of basic algebra, quadratic formula, systems of linear equations, introduction to functions and graphing. This course is not available for credit to persons who have received credit in any mathematics course of a higher number with the exceptions of MA 111, 112, 123, 162, 201 and 202. Credit not available on the basis of special examination. Prereq: Two years of high school algebra and a Math ACT score of 21 or above or a Math SAT score of 510 or above; or UK 096; or appropriate MathIndex; or grade of B or better in MA 111. Math placement test recommended.

MA 110 ALGEBRA AND TRIGONOMETRY FOR CALCULUS. (4)

This is a course specifically designed for students intending to enroll in a calculus sequence. Topics will include trigonometric functions, exponentials and logarithms, graphs, polar coordinates and conic sections. Students may not receive credit for MA 110 and either of MA 109 and MA 112. This course is not available for credit to students who have received credit in any higher numbered mathematics course except for MA 111, MA 123, MA 162, MA 201 or MA 202. Credit is not available by special examination. Math placement exam recommended. Lecture, three hours, recitation two hours per week. Prereq: Two years of high school algebra and a Math ACT score of 23 or above, or two years of high school algebra and a Math SAT score of 540 or above, or appropriate score on math placement exam, or a C in MA 109, or consent of department.

MA 111 INTRODUCTION TO CONTEMPORARY MATHEMATICS. (3)

An introduction to concepts and applications of mathematics, with examples drawn from such areas as voting methods, apportionment, consumer finance, graph theory, tilings, polyhedra, number theory, and game theory. This course is not available for credit to persons who have received credit in any mathematics course of a higher number with the exceptions of MA 112, 123, 162, 201 and 202. This course does not serve as a prerequisite for any calculus course. Credit not available on the basis of special examination. Prereq: Two years of high school algebra and a Math ACT score of 19 or above, or MA 108R, or math placement test.

MA 112 TRIGONOMETRY. (2)

A standard course. Includes trigonometric functions, identities, multiple-angle formulas, laws of sines and cosines, and graphs of trigonometric functions. This course is not available to persons who have received credit for any mathematics course of a higher number with the exception of MA 113, 123, 132 and 162. Credit not available by special examination. Prereq: Two years of high school algebra and a Math ACT score of 21 or above or a Math SAT score of 510 or above; or MA 108R; or appropriate score on the math placement test.

MA 113 CALCULUS I. (4)

A course in one-variable calculus, including topics from analytic geometry. Derivatives and integrals of elementary functions (including the trigonometric functions) with applications. Lecture, three hours; recitation, two hours per week. Students may not receive credit for MA 113 and MA 137. Prereq: Math ACT of 27 or above, or Math SAT of 620 or above, or a grade of C or better in MA 109 and in MA 112, or a grade of C or better in MA 110, or appropriate score on math placement test, or consent of the department. Students who enroll in MA 113 based on their test scores should have completed a year of pre-calculus study in high school that includes the study of the trigonometric function. Note: Math placement test recommended.

MA 114 CALCULUS II. (4)

A second course in Calculus. Applications of the integral, techniques of integration, convergence of sequence and series, Taylor series, polar coordinates. Lecture, three hours; recitation, two hours per week. Prereq: A grade of C or better in MA 113, MA 137 or MA 132.

MA 123 ELEMENTARY CALCULUS AND ITS APPLICATIONS. (4)

An introduction to differential and integral calculus, with applications to business and the biological and physical sciences. Not open to students who have credit in MA 113 or MA 137. Note: Math placement test recommended. Prereq: Math ACT score of 26 or above, or Math SAT of 600 or above, or a grade of C or better in MA 109, or appropriate math placement score, or consent of department. Note: Math placement test recommended.

MA 132 CALCULUS FOR THE LIFE SCIENCES. (3)

Introduction to integral calculus, integration of logarithmic and exponential functions. Applications to the life sciences including biochemical rates and reactions and radioactive decay. An introduction to biological models and their associated differential equations. Prereq: MA 123 or consent of instructor.

MA 137 CALCULUS I WITH LIFE SCIENCE APPLICATIONS. (4)

A first course in one-variable calculus. Derivatives and integrals of elementary functions (including the trigonometric functions) with applications to the life sciences. Lecture, three hours; recitation, two hours per week. Students may not earn credit for MA 113 and MA 137. Note: Math placement test recommended. Prereq: Math ACT of 27 or above, or Math SAT of 620 or above, or a grade of C or better in MA 109 and in MA 112, or a grade of C or better in MA 110, or appropriate score on math placement test, or consent of the department. Students who enroll in MA 137 based on their test scores should have completed a year of pre-calculus study in high school that includes the study of trigonometric functions. Note: Math placement test recommended.

MA 138 CALCULUS II WITH LIFE SCIENCE APPLICATIONS. (4)

A second course in calculus. Techniques of integration, introduction to differential equations, geometry and differential calculus in several dimensions. Students may not receive credit for MA 114 and MA 138. Prereq: Grade of "C" or better in MA 113, MA 132 or MA 137.

MA 162 FINITE MATHEMATICS AND ITS APPLICATIONS. (3)

Finite mathematics with applications to business, biology, and the social sciences. Linear functions and inequalities, matrix algebra, linear programming, probability. Emphasis on setting up mathematical models from stated problems. Prereq: MA 109 or equivalent.

MA 193 SUPPLEMENTARY MATHEMATICS WORKSHOP I: (Subtitle required). (1-2)

Laboratory offered (only) as an adjunct to certain mathematics lecture courses. Offered only on a pass/fail basis. Coreq: Set by instructor.

MA 194 SUPPLEMENTARY MATHEMATICS WORKSHOP II: (Subtitle required). (1-2)

Laboratory offered (only) as an adjunct to certain mathematics lecture courses. Offered only on a pass/fail basis. Coreq: Set by instructor.

MA 201 MATHEMATICS FOR ELEMENTARY TEACHERS. (3)

Sets, numbers and operations, problem solving and number theory. Recommended only for majors in elementary and middle school education. Prereq: MA 109 or MA 111 or consent of department.

MA 202 MATHEMATICS FOR ELEMENTARY TEACHERS. (3)

Algebraic reasoning, introduction to statistics and probability, geometry, and measurement. Prereq: A grade of "C" or better in MA 201. Also recommended: a course in logic (e.g. PHI 120) or a course in calculus (e.g. MA 123).

MA 213 CALCULUS III. (4)

A course in multi-variable calculus. Topics include vectors and geometry of space, three-dimensional vector calculus, partial derivatives, double and triple integrals, integration on surfaces, Green's theorem. Optional topics include the Stokes theorem and the Gauss divergence theorem. Lecture, three hours; recitation, two hours per week. Prereq: A grade of C or better in MA 114 or in MA 138 or equivalent.

MA 214 CALCULUS IV. (3)

MA 214 is a course in ordinary differential equations. Emphasis is on first and second order equations and applications. The course includes series solutions of second order equations and Laplace transform methods. Prereq: MA 213 or equivalent.

MA 241 GEOMETRY FOR MIDDLE SCHOOL TEACHERS. (3)

A course in plane and solid geometry designed to give middle school mathematics teachers the knowledge needed to teach a beginning geometry course. Cannot be counted toward the mathematics minor or major. Prereq: One semester of calculus or MA 201 with a grade of C or better.

MA 261 INTRODUCTION TO NUMBER THEORY. (3)

Topics from classical number theory, including discussions of mathematical induction, prime numbers, division algorithms, congruences, and quadratic reciprocity. Prereq: Grade of C or better in MA 114 or consent of instructor.

MA 308 MATHEMATICAL PROBLEM SOLVING FOR MIDDLE SCHOOL TEACHERS. (3)

Heuristics of problem solving. Practice in solving problems from algebra, number theory, geometry, calculus, combinatorics, and other areas. Primarily for middle school teachers. This course may not be counted towards a mathematics major or minor. Prereq: MA 123 or MA 113 or MA 137 or consent of the instructor.

MA 310 MATHEMATICAL PROBLEM SOLVING FOR TEACHERS. (3)

Heuristics of problem solving. Practice in solving problems from algebra, number theory, geometry, calculus, combinatorics and other areas. Primarily for middle and secondary school teachers. Prereq: MA 123 or MA 113.

MA 320 INTRODUCTORY PROBABILITY. (3)

Set theory; fundamental concepts of probability, including conditional and marginal probability; random variables and probability distributions (discrete and continuous); expected values and moments; moment-generating and characteristic functions; random experiments; distributions of random variables and functions of random variables; limit theorems. Prereq: MA 213 or equivalent. (Same as STA 320.)

MA 321 INTRODUCTION TO NUMERICAL METHODS. (3)

Floating point arithmetic. Numerical linear algebra: elimination with partial pivoting and scaling. Polynomial and piecewise interpolation. Least squares approximation. Numerical integration. Roots of nonlinear equations. Ordinary differential equations. Laboratory exercises using software packages available at computer center. Prereq: MA 114 and knowledge of a procedural computer language is required. (Same as CS 321.)

MA 322 MATRIX ALGEBRA AND ITS APPLICATIONS. (3)

Algebra of matrices, elementary theory of vector spaces and inner product spaces, the solution of simultaneous linear equations using Gaussian elimination and triangular factorization. Orthogonal projections, pseudo inverse and singular value decomposition, least squares approximation. Determinants, eigenvalues and eigenvectors, diagonalization. Prereq: MA 114.

MA 327 STRATEGIC DECISION MAKING: AN INTRODUCTION TO GAME THEORY. (3)

The course is an introduction to strategic decision making and game theory. Ideas such as Nash equilibrium, dominant strategies, evolutionary stability, and asymmetric information are applied to a variety of strategic decision making problems taken from economics, computer science, politics, and biology. Prereq: A grade of B or better in MA 113 or MA 132 or MA 137 or consent of department. Students should have a strong background in first semester calculus. (Same as ECO 327.)

MA 330 HISTORY OF MATHEMATICS. (3)

A survey of the development of mathematics. Topics may include: the Egyptians and Babylonians, mathematics of the Greek Classical Age, Euclid and the Alexandrian School, the Renaissance, Fermat and the beginning of calculus, the work of Newton and Leibnitz, nineteenth century geometry, analysis and set theory. Prereq: MA 114.

#MA 337 MATHEMATICAL MODELING IN THE LIFE SCIENCES. (3)

This course introduces mathematical modeling in biology and other life science disciplines using discrete and continuous tools and techniques, including difference equations and differential equations. Students will learn to construct, analyze, and simulate models and interpret the results within their biological context. Prereq: A grade of B or better in MA 114 (Calculus II) or MA 138 (Calculus II with Life Science Applications) or consent of department. (Same as BIO 337.)

MA 340 APPLICABLE ALGEBRA. (3)

Topics include: Euclid's algorithm, unique factorization moduli arithmetic, Fermat's and Euler's theorems, Chinese remainder theorem, RSA public key encryption, Pollard rho factoring, pseudo primes, error correcting codes, Hamming codes, polynomial rings and quotient rings, field extensions, finite fields and BCH codes. Prereq: MA 322 or MA 213. (Same as CS 340.)

MA 341 TOPICS IN GEOMETRY. (3)

Selected topics in geometry including Euclidean and some non-Euclidean geometries. Prereq: MA 261 or consent of instructor.

MA 351 ELEMENTARY TOPOLOGY I. (3)

A beginning course, with particular emphasis on point-set topology in Euclidean spaces. Prereq: MA 261 or consent of instructor. Coreq: MA 213.

MA 352 ELEMENTARY TOPOLOGY II. (3)

A continuation of MA 351, to include a discussion of metric spaces, completeness, general topological spaces, compactness, connectedness. Prereq: MA 351 or consent of instructor.

MA 361 ELEMENTARY MODERN ALGEBRA I. (3)

A beginning course, with particular emphasis on groups and rings. Prereq: MA 261 or consent of instructor. Coreq: MA 322.

MA 362 ELEMENTARY MODERN ALGEBRA II. (3)

A continuation of MA 361 to include a discussion of fields and topics in linear algebra. Prereq: MA 361 or consent of instructor.

MA 375 COMMUNICATING MATHEMATICS. (3)

A course intended to provide understanding of and experience with contemporary mathematical communication in a modern instructional setting. Primarily intended for, but not restricted to, prospective school and college teachers of mathematics, including students who may intend to enroll in a graduate program and work as a graduate teaching assistant while pursuing an advanced degree. May not be counted as an upper division mathematics course in mathematics degree programs. Lecture, one hour; laboratory, four hours per week. Prereq: MA 261 or MA 214; and MA 322; and at least one of MA 351, MA 361, or MA 471G; and consent of instructor.

MA 391 MATHEMATICS: COMPOSITION AND COMMUNICATION. (3)

Undergraduate topics course. The mathematical content will be selected at the discretion of the instructor. The course satisfies the Graduation Composition and Communication Requirement for mathematics majors. Prereq: The student must satisfy each of the following 5 conditions: (1) MA 213; (2) one of MA 261 or MA 214; (3) MA 322; (4) one of MA 321, MA 351, MA 361, or MA 471G; (5) at least 30 completed credit hours. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

MA 398, 399 INDEPENDENT WORK IN MATHEMATICS. (3 ea.)

Reading courses for upper division students of high standing. Prereq: Mathematics or mathematical sciences major and a standing of 3.0 in the department.

MA 415G COMBINATORICS AND GRAPH THEORY. (3)

A basic course in the theory of counting and graph theory. Topics in enumerative combinatorics may include: generating functions, compositions, partitions, Fibonacci numbers, permutations, cycle structure of permutations, permutations statistics, Stirling numbers of the first and second kind, Bell numbers, inclusion-exclusion. Topics in graph theory may include: Eulerian and Hamiltonian cycles, matrix tree theorem, planar graphs and the 4-color theorem, chromatic polynomial, Hall's marriage theorem, stable marriage theorem, Ramsey theory, electrical networks. Prereq: MA 213 or MA 322. (Same as CS 415G.)

MA 416G INTRODUCTION TO OPTIMIZATION. (3)

The course is an introduction to modern operations research and includes discussion of modeling, linear programming, dynamic programming, integer programming, scheduling and inventory problems, and network algorithms. Prereq: MA 213 or equivalent. (Same as CS 416G.)

MA 417G DECISION MAKING UNDER UNCERTAINTY. (3)

A continuation of MA 416 with topics selected from stochastic models, decision making under uncertainty, inventory models with random demand, waiting time models and decision problems. Prereq: CS/MA 416G and MA/STA 320, or consent of instructor. (Same as STA 417G.)

MA 422 NUMERICAL SOLUTIONS OF EQUATIONS. (3)

Linear equations: Gaussian elimination, special linear systems, orthogonalization, eigenproblem, iterative methods. Nonlinear equations: solutions of equations in one variable, solutions of systems of nonlinear equations. Optimization. Prereq: MA 261 or consent of instructor. Coreq: MA 322. (Same as CS 422.)

MA 432G METHODS OF APPLIED MATHEMATICS I. (3)

Partial differentiation, Jacobians, implicit function theorem, uniform convergence of series, line and surface integrals. Green's and Stokes' theorems. Prereq: MA 213 or equivalent.

MA 433G INTRODUCTION TO COMPLEX VARIABLES. (3)

Elementary complex variable theory with applications. Complex field, analytic functions, Cauchy theorem, power series, residue theory. Prereq: MA 213 or consent of the instructor.

MA 471G ADVANCED CALCULUS I. (3)

A careful and vigorous investigation of the calculus of functions of a single variable. Topics will include elementary topological properties of the real line, convergence limits, continuity, differentiation and integration. Prereq: MA 213 and MA 322; or consent of the instructor.

MA 472G ADVANCED CALCULUS II. (3)

A continuation of MA 471G to functions of several variables. A careful and rigorous investigation of the extensions of the concepts of the one variable calculus to n-dimensions. Prereq: MA 471G or consent of instructor.

MA 481G DIFFERENTIAL EQUATIONS. (3)

The fundamental goal is to cover those mathematical theories essential to the study of quantum mechanics (physics and mathematics students) and the qualitative and quantitative study of partial differential equations, especially the partial differential equations of mathematical physics (engineering graduate students). The course encompasses the following topics: uniform convergence, Picard's existence proof, Power series techniques, regular singular point theory, Bessel's equation, Legendre, Hermite and Chebyshev polynomials, Orthogonal Functions, completeness, convergence in the mean, Sturm-Liouville theory, eigenvalues, eigenfunction expansions, Sturm comparison and oscillation theorems. Separation of variable techniques for the heat, wave, and Laplace's equation. Prereq: One of MA 432G, MA 471G or equivalent, or consent of instructor.

MA 483G INTRODUCTION TO PARTIAL DIFFERENTIAL EQUATIONS. (3)

MA 483G is essentially an introductory course in partial differential equations designed to prepare undergraduate mathematics majors for serious work in partial differential equations and to provide Ph.D. candidates in engineering and science with an introduction to partial differential equations which will serve as a foundation for their advanced numerical and qualitative work (e.g., in computational fluid dynamics.) The course encompasses the following topics: first order linear equations, characteristics, Laplace's equation, wave equation and heat equation, boundary value problems, Fourier series, Green's identities and Green's functions, general eigenvalue problems. Prereq: One of MA 432G, MA 471G, MA 481G, or equivalent, or consent of instructor.

MA 485G FOURIER SERIES AND BOUNDARY VALUE PROBLEMS. (3)

An introductory treatment of Fourier series and its application to the solution of boundary value problems in the partial differential equations of physics and engineering. Orthogonal sets of functions, Fourier series and integrals, solution of boundary value problems, theory and application of Bessel functions and Legendre polynomials. Prereq: MA 432G or equivalent. This course is open only to graduate students or undergraduates with engineering standing. (Same as ME 585.)

MA 501, 502 SEMINAR IN SELECTED TOPICS. (3 ea.)

Various topics from the basic graduate courses. Designed as a course for teachers of lower division mathematics and usually offered in connection with a summer institute. May be repeated to a maximum of six credits. Prereq: Teaching experience in the field of mathematics and consent of instructor.

MA 506 METHODS OF THEORETICAL PHYSICS I. (3)

The course and its sequel (MA/PHY 507) are designed to develop, for first-year graduate students, familiarity with the mathematical tools useful in physics. Topics include curvilinear coordinates, infinite series, integrating and solving differential equations of physics, and methods of complex variables. Work with Green's functions, eigenvalues, matrices and the calculus of variations are included as a part of MA/PHY 506 and 507. Prereq: PHY 404G or equivalent. (Same as PHY 506.)

MA 507 METHODS OF THEORETICAL PHYSICS II. (3)

Continuation of MA/PHY 506. Fourier and Laplace Transforms, the special functions (Bessel, Elliptic, Gamma, etc.) are described. Work with Green's functions, eigenvalues, matrices and the calculus of variations are included as a part of MA/PHY 506 and 507. Prereq: MA/PHY 506. (Same as PHY 507.)

MA 514 COMBINATORIAL STRUCTURES AND TECHNIQUES. (3)

An introduction to fundamental structures and techniques in combinatorics, including such topics as graphs, trees, colorings of graphs, extremal graphs, bipartite matchings, partially ordered sets, extremal set theory, flows in networks, and the principle of inclusion/exclusion. Prereq: MA 322 and one additional upper division math course or consent of instructor.

MA 515 LINEAR AND COMBINATORIAL OPTIMIZATION. (3)

Mathematical and computational aspects of linear programming and combinatorial optimization. Linear optimization is introduced by presenting solution techniques (primal and dual simplex) and studying geometric properties and duality for linear systems of inequalities. Asics of combinatorial optimization, including trees, paths, flows, matchings, and matroids, and the corresponding algorithms are presented. Prereq: A course in linear algebra or consent of instructor. (Same as STA 515.)

MA 522 MATRIX THEORY AND NUMERICAL LINEAR ALGEBRA I. (3)

Review of basic linear algebra from a constructive and geometric point of view. Factorizations of Gauss, Cholesky and Gram-Schmidt. Determinants. Linear least squares problems. Rounding error analysis. Stable methods for updating matrix factorizations and for linear programming. Introduction to Hermitian eigenvalue problems and the singular value decomposition via the QR algorithm and the Lanczos process. Method of conjugate gradients. Prereq: MA 322. (Same as CS 522.)

MA 527 APPLIED MATHEMATICS IN THE NATURAL SCIENCES I. (3)

Construction, analysis and interpretation of mathematical models applied to problems in the natural sciences. Physical problems whose solutions involve special topics in applied mathematics are formulated, various solution techniques are introduced, and the mathematical results are interpreted. Fourier analysis, dimensional analysis and scaling rules, regular and singular perturbation theory, random processes and diffusion are samples of selected topics studied in the applications. Intended for students in applied mathematics, science and engineering. Prereq: MA 432G or three hours in an equivalent junior/senior level mathematics

course, or consent of instructor. This course is open only to graduate students or undergraduates with engineering standing. (Same as ME 527.)

MA 533 PARTIAL DIFFERENTIAL EQUATIONS. (3)
Elementary existence theorems, equations of first order, classification of linear second order equations, the Cauchy and Dirichlet problems, potential theory, the heat and wave equations, Green's and Riemann functions, separation of variables, systems of equations. Prereq: MA 532 and MA 472G or equivalent.

MA 537 NUMERICAL ANALYSIS. (3)
Floating point arithmetic. Direct methods for the solution of systems of linear algebraic equations. Polynomial and piecewise polynomial approximation, orthogonal polynomials. Numerical integration: Newton Cotes formulas and Gaussian quadrature. Basic methods for initial value problems for ordinary differential equations. The emphasis throughout is on the understanding and use of software packages for the solution of commonly occurring problems in science and engineering. Prereq: CS/MA 321 or equivalent or graduate standing or consent of instructor. Knowledge of a procedural computer language is required. (Same as CS/EGR 537.)

MA 551 TOPOLOGY I. (3)
Topological spaces, products, quotients, subspaces, connectedness, compactness, local compactness, separation axioms, convergence. Prereq: Consent of instructor.

MA 561 MODERN ALGEBRA I. (3)
Algebraic structures, quotient structures, substructures, product structures, groups, permutation groups, groups with operators, and the Jordan-Hölder theorem. Prereq: Consent of instructor.

MA 565 LINEAR ALGEBRA. (3)
Review of finite dimensional linear algebra, the rank of a matrix, systems of linear equations, determinants, characteristic and minimal polynomials of a matrix, canonical forms for matrices, the simplicity of the ring of linear mappings of a finite dimensional vector space, the decomposition of a vector space relative to a group of linear mappings and selected topics of a more advanced nature. Prereq: MA 322 or consent of instructor.

MA 570 MULTIVARIATE CALCULUS. (3)
A self-contained course in n-dimensional analysis, including the general form of Stokes' theorem. Prereq: MA 432G or equivalent.

MA 575 PRINCIPLES OF ANALYSIS. (3)
Real and complex numbers, sequences and series, continuity, differentiation, integration, and uniform convergence. Prereq: MA 471G or equivalent or consent of instructor.

MA 601 TEACHING COLLEGE MATHEMATICS. (1)
A seminar for teaching assistants on the basics of teaching mathematics at the college level as well as use of appropriate technology. Includes topics such as syllabus construction, lesson planning, grading assignments, web pages, typesetting mathematics with LaTeX. Required of all new graduate teaching assistants in mathematics. Prereq: Must hold teaching assistantship in mathematics or consent of the instructor.

MA 611 INDEPENDENT WORK IN MATHEMATICS. (3-9)
Reading course for graduate students in mathematics. May be repeated to a maximum of nine credits. Prereq: Major in mathematics, a standing of at least 3.0 and consent of instructor.

MA 613 PROBLEMS SEMINAR IN OPERATIONS RESEARCH. (3)
In this course the student is exposed to the art of applying the tools of operations research to "real world" problems. The seminar is generally conducted by a group of faculty members from the various disciplines to which operations research is applicable. Prereq: MA 617 and STA 525 or consent of instructor. (Same as EE/STA 619).

MA 614 ENUMERATIVE COMBINATORICS. (3)
An introduction to the basic notions and techniques in enumerative combinatorics. The material has applications to polytopal theory, hyperplane arrangements, computational commutative algebra, representation theory and symmetric functions. Topics include generating functions, the principle of inclusion and exclusion, bijections, recurrence relations, partially ordered sets, the Möbius function and Möbius algebra, the Lagrange inversion formula, the exponential formula and tree enumeration. Prereq: A graduate course in linear algebra or consent of instructor.

MA 622 MATRIX THEORY AND NUMERICAL LINEAR ALGEBRA II. (3)
Numerical solution of matrix eigenvalue problems and applications of eigenvalues. Normal forms of Jordan and Schur. Vector and matrix norms. Perturbation theory and bounds for eigenvalues. Stable matrices and Lyapunov theorems. Nonnegative matrices. Iterative methods for solving large sparse linear systems. (Same as CS 622.)

MA 625 NUMERICAL METHODS FOR DIFFERENTIAL EQUATIONS. (3)
Numerical solution techniques for boundary value problems for ordinary differential equations, and for parabolic and elliptic partial differential equations. Prereq: CS/MA/EGR 537 or consent of instructor.

MA 628 APPLIED MATHEMATICS IN THE NATURAL SCIENCES II. (3)
Continuation of MA/EM 527 with emphasis on special topics and techniques applied to partial differential equations that occur in various physical field theories. Field equations of continuum mechanics of solids and fluids are reviewed. The method of characteristics, elliptic functions and integrals, Legendre polynomials, Mathieu functions, integral equations and transforms, and

the methods of potential theory are examples of selected topics studied in introductory applications. Intended for students in applied mathematics, science and engineering. Prereq: MA/EM 527.

MA 630 MATHEMATICAL FOUNDATIONS OF STOCHASTIC PROCESSES AND CONTROL THEORY I. (3)
A modern treatment of stochastic processes from the measure theoretic point of view with applications to control theory; the basic notions of probability theory, independence, conditional expectations, separable stochastic processes, martingales, Markov processes, second order stochastic processes. Prereq: MA 432G and 670.

MA 633 THEORY OF PARTIAL DIFFERENTIAL EQUATIONS. (3)
A continuation of MA 533. Topics may include hypoelliptic operators and interior regularity of solutions; P(D)-convexity and existence theorems; regularity up to the boundary; applications of the maximum principle; semi-group theory for evolution equations; perturbation methods; well-posed and improperly posed problems; equations with analytic coefficients; asymptotic behavior of solutions; nonlinear problems. Prereq: MA 533.

MA 641 DIFFERENTIAL GEOMETRY. (3)
Tensor products, exterior algebra, differentiable maps, manifolds, geodesics, metric properties of curves in Euclidean fundamental forms, surfaces. Prereq: Consent of instructor.

MA 651 TOPOLOGY II. (3)
Embedding and metrization, compact spaces, uniform spaces and function spaces. Prereq: MA 551.

MA 654 ALGEBRAIC TOPOLOGY I. (3)
Homotopy and homology theories, complexes and applications. Prereq: MA 551, 561, 651 or equivalent.

MA 655 ALGEBRAIC TOPOLOGY II. (3)
Singular homology theory and applications, homology of products, singular and Čech cohomology with applications. Prereq: MA 654.

MA 661 MODERN ALGEBRA II. (3)
Rings, fields of quotients, rings of polynomials, formal power series, modules, exact sequences, groups of homomorphisms, natural isomorphisms, algebras and tensor algebras. Prereq: MA 561 or consent of instructor.

MA 665 RINGS AND MODULES. (3)
This graduate course is a continuation of MA 661. Topics include modules over principal ideal domains, localization, primary decomposition, associated prime ideals, classes of rings and modules such as Noetherian rings and Dedekind domains, tensor and exterior products, exact sequences and resolutions, ideals and varieties, Hilbert's Nullstellensatz. Prereq: MA 561 and MA 661 or consent from instructor.

MA 667 GROUP THEORY. (3)
A study of homomorphisms for groups, finite groups, solvable groups, nilpotent groups, free groups, and abelian groups. Prereq: MA 661.

MA 671 FUNCTIONS OF A COMPLEX VARIABLE I. (3)
Differentiation and integration, contour integration, poles and residues. Taylor and Laurent series, and conformal mapping. Prereq: MA 575 or consent of instructor.

MA 672 FUNCTIONS OF A COMPLEX VARIABLE II. (3)
A continuation of MA 671 to include the Riemann Mapping theorem, Dirichlet problem, multiple valued functions, Riemann surfaces and applications. Prereq: MA 671.

MA 676 ANALYSIS I. (3)
Sequences and series of real and complex numbers, sequences of functions. Riemann-Stieltjes integration, Lebesgue measure and integration. Prereq: MA 575 or consent of instructor.

MA 677 ANALYSIS II. (3)
Continuation of MA 676. Absolutely continuous functions on the real line, Lebesgue spaces, beginning theory of Banach spaces including the Hahn-Banach, closed graph, and open mapping theorems. Prereq: MA 676 or consent of instructor.

MA 681 FUNCTIONAL ANALYSIS I. (3)
General theory of normed linear spaces including the Hahn-Banach separation theorems, principle of uniform boundedness and closed graph theorem. Dual spaces and representation theorems for linear functionals. Abstract measure theory and Riesz representation theorem for $C(X)$. Prereq: MA 677 or consent of instructor.

MA 714 TOPICS IN DISCRETE MATHEMATICS (Subtitle Required). (3)
Review of recent research in discrete mathematics. May be repeated to a maximum of nine credits. Prereq: Consent of the instructor.

MA 721 SELECTED TOPICS IN NUMERICAL ANALYSIS. (3)
Review of current research in numerical analysis. May be repeated to a maximum of nine credits. Prereq: Consent of instructor.

MA 732 SELECTED TOPICS IN DIFFERENTIAL AND INTEGRAL EQUATIONS. (3)
Advanced topics in theory of differential (ordinary or partial) and integral equations such as topological dynamics, almost periodic solutions, stochastic differential equations, integro-

Course Descriptions

differential and differential-difference equations, generalized functions as solutions, non-linear partial differential equations, singular integral equations.

MA 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

MA 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

MA 751, 752 SELECTED TOPICS IN TOPOLOGY. (3 ea.)

Prereq: MA 651.

MA 764, 765 SELECTED TOPICS IN ALGEBRA. (3 ea.)

Reports and discussion on recent advances in group theory, ring theory, and homological algebra. Prereq: MA 661 and consent of instructor.

MA 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

MA 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

MA 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

MA 773 SELECTED TOPICS IN ANALYSIS. (3)

May be repeated to a maximum of six credits. Prereq: Consent of instructor.

MA 777 MATHEMATICAL SEMINAR. (3)

May be repeated once to a total of six credits. Prereq: Consent of instructor.

MA 778 MATHEMATICAL SEMINAR. (3)

May be repeated once to a total of six credits. Prereq: Consent of instructor.

MAP Mapping

MAP 671 INTRODUCTION TO NEW MAPPING. (3)

This course introduces students to both the social and technical aspects of digital mapping in the 21st century. Students will learn fundamental concepts and techniques in cartography and GIS, including file types, data classification, projections and coordinate systems and elementary analytical techniques in a range of desktop and web-based mapping platforms. In addition to providing the fundamental technical competencies necessary to create maps, students will develop the critical awareness required to effectively communicate complex social processes through maps.

MAP 672 PROGRAMMING FOR WEB MAPPING. (4)

This course introduces students to the fundamental concepts and techniques of web development and computer programming through web mapping. Students will become familiar with current web standards and proficient in manipulating the structural, stylistic and behavioral elements of web maps through programming. Students will translate these practices to achieve objectives in web cartography such as the display of a basemap, the thematic representation of data, and the employment of interaction to enhance visual communication and the presentation of information. Prereq: MAP 671 or consent of instructor.

MAP 673 DESIGN FOR INTERACTIVE WEB MAPPING. (4)

This course integrates the principles of geographic representation and web programming in order for students to develop high-quality interactive web maps. Students will design interactive web map projects that appropriately represent spatial data in order to serve end-user goals of map engagement and visual communication. The course will train students to compose interactive maps within the context of a coherent web page layout, including the development of supplementary content (such as text and metadata) to aid in visual storytelling. Prereq: MAP 672 or consent of instructor.

MAP 674 SPATIAL DATA ANALYSIS AND VISUALIZATION. (4)

This course will introduce students to advanced techniques for the quantitative analysis and visualization of spatial data. Students will become familiar with a broad spectrum of data cleaning, transformation, analysis, and visualization techniques helpful for answering in-depth questions based on geospatial data. Students will learn how to prepare raw source data and subsequently apply both global and local spatial analysis techniques, resulting in advanced, interactive data visualizations. Prereq: MAP 672 or consent of instructor.

MAP 675 COLLABORATIVE GEOVIZUALIZATION. (4)

This course will enable students to build rich, user-centered web interfaces to promote the exploration and understanding of complex spatial datasets. Students will be able to critically engage with a variety of data sources (e.g., public data repositories, crowdsourced or volunteered data) and design interactive cartographic solutions in order to visualize geographic information. Students will be able to augment prototypical 'slippy' web maps through more

advanced cartographic enablements and accompany information graphics. Prereq: MAP 673 or consent of instructor.

MAP 695 SPECIAL TOPICS IN DIGITAL MAPPING. (1-4)

This course offers a combination of readings, discussions, exercises and labs focusing on relevant topics in digital mapping. Course format may range from critical reading of selected literatures to innovative mapping methodologies. Current research developments and technologies in particular digital mapping subfields will be stressed. May be repeated under different subtitles to a maximum of eight credits. Prereq: Consent of instructor.

MAP 698 FINAL PROJECT PREPARATION. (3)

This course will enable students to design and prepare a web mapping workflow for a project of their own selection. This project is the masterwork for the Master's degree program in digital mapping. Students will determine a geographic problem mapping can address, identify user needs, review relevant literatures, address ethical concerns, collect and prepare the data necessary for the project. Students will also propose strategies for data representation, user interface and online dissemination of the project. This course will culminate with a project design presentation and critique by peers and instructors. Prereq: All other course work toward the Master's degree in digital mapping must be completed.

MAP 699 FINAL PROJECT IMPLEMENTATION. (3)

This course takes the project design developed in MAP 698 and develops a mapping project based on this outline. Students will conduct data analysis, iteratively review and improve the map user interface, produce written documentation on methods used and findings and engage in intense testing of the mapping solution with peers and targeted end users. At the end of the course, students will make a real time online oral presentation and defense of the project for a committee of faculty members. Prereq: All other course work toward the Master's degree in digital mapping must be completed. With permission of the instructor 699 may be taken concurrently with 698.

MAP 701 HISTORY OF CRITICAL CARTOGRAPHY. (2)

This course outlines key moments and arguments in the history of cartography with particular attention to advent of digital mapping and GIScience. Students will review and discuss the epistemological and ontological tensions within the field and practice a range of philosophical approaches to cartographic representation and spatial analysis. Prereq: Consent of instructor.

MAP 719 SOCIAL IMPACTS OF NEW MAPPING. (3)

This seminar introduces social and cultural issues that have emerged alongside the growth of digital mapping and location based services. It reviews the evolving nature of digital divides, expert versus crowdsourced knowledge, surveillance, privacy and the ethics of big geospatial data collection and use. Students will utilize these discussions of the social impacts of new mapping to challenge and contextualize their own mapping projects. Prereq: MAP 671 or consent of instructor.

MAS Media Arts and Studies

MAS 101 INTRODUCTION TO MEDIA AND CULTURE. (3)

This course focuses on the study of electronic mass media. It surveys the cultural industries from multiple perspectives, including history, economics, production processes, content, social effects, diversity, and globalization. It emphasizes the relationships among the electronic mass media, culture, and power.

MAS 201 COMMUNICATION TECHNOLOGIES AND SOCIETY. (3)

Historical survey of broadcasting, common carrier, and related electronic media technologies, including the Internet. This course focuses on the social, political, and policy dimensions of the adoption and use of communication technologies. Special attention is paid to significant issues in contemporary public policy and practice, such as protection of privacy and personal information, information ownership, free speech, and censorship.

MAS 300 MEDIA STUDIES RESEARCH METHODS. (3)

An introduction to quantitative and qualitative social science research relating to media studies, including survey and experimental methods. Prereq: Media Arts & Studies major or minor status or consent of instructor. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

MAS 310 MEDIA POLICY AND REGULATION. (3)

A study of policy and regulation of media in the U.S., primarily broadcasting, cable, telephone, and the internet. This includes traditional issues in the regulation of content, such as freedom of speech, copyright, obscenity, and privacy. It also includes traditional areas in the regulation of the industry structure including monopolies, licensing, cross ownership rules, mergers, and illegal practices. Prereq: Media Arts & Studies major status.

MAS 312 VIDEO PRODUCTION I. (3)

An introduction to the fundamentals of studio video production, from conception to completed product. Practical training with essential production equipment will be offered. Lecture, two hours; laboratory, two hours per week. Prereq: Media Arts & Studies major or minor status or consent of instructor.

MAS 319 WORLD MEDIA SYSTEMS. (3)

A comparison of the communications media in different countries of the world and the theories used to justify them. How various political and social systems affect the media and how the media affect the societies in which they exist. Prereq: JOU 101 or ISC 161 or MAS 101 or TEL 101. (Same as ISC/JOU 319.)

- MAS 322 MULTIMEDIA I.** (3)
Introduction to techniques of multimedia production and the basic principles of communication via multimedia. Practical, hands-on experience with various media used in computer-based multimedia including: text, still graphics, motion graphics, animation, sound, and hyperlinking. Includes stand-alone computer- and Web-based applications. Lecture, two hours; laboratory, two hours per week. Prereq: Media Arts & Studies major or minor status or consent of instructor.
- #MAS 323 MEDIA PSYCHOLOGY.** (3)
Media psychology provides a basic overview of human thought and behavior regarding communications media. The course addresses issues of preference and media choice and of the effects of media use on audience beliefs, attitudes and behavior through the lens of social science. Prereq: MAS major or minor status or permission of the instructor.
- *MAS 335 INTRODUCTION TO THE MEDIA INDUSTRIES.** (3)
This course introduces students to the major functions and operations of the media industries, with a focus on the film and television industries. The course examines current trends in media practices and the role of technological and cultural factors in shaping the media industries and their effects in society. Prereq: Media Arts & Studies major or minor status or consent of instructor.
- MAS 355 COMMUNICATION AND INFORMATION SYSTEMS IN ORGANIZATIONS.** (3)
An examination of the role of a variety of communication and information systems used in organizations. This includes the study of communication processes across a variety of systems, including the telephone, e-mail, voice mail, and audio- and video-conferencing. It also includes an examination of the uses for a variety of information systems and technologies, including computer networks, integrated voice response systems, computer-telephony integration, call centers, automated attendants, voice recognition, and synthesis, database management systems, and a variety of additional hardware and software tools used in business today. Prereq: Media Arts & Studies major or minor status or consent of instructor.
- MAS 390 SPECIAL TOPICS IN MEDIA PRODUCTION (Subtitle required).** (3)
Course will focus on selected topics in the practice and theory of electronic media production. Course will be offered on demand. May be repeated to a maximum of six credits under a different subtitle. Prereq: Media Arts & Studies major or minor status or consent of the instructor.
- MAS 403 TV NEWSCAST PRODUCING AND DIRECTING.** (3)
This class is designed to train students to become television newscast producers and directors. Students will prepare TV newscasts with consideration of news story placement as it relates to audience, viewing trends, and journalistic judgment. Students will learn critical thinking skills in producing and directing as it relates to newscast and story promotion, reaching to major news events and their coverage, and talent and time management. Students will be required to write, produce and direct news stories in different formats for different formats for different newscasts and address ethical and legal concerns of news stories. Prereq: JOU 302 for JOU Majors; MAS 312 for MAS majors. (Same as JOU 403.)
- MAS 412 VIDEO PRODUCTION II.** (3)
A follow-up to MAS 312, this course is an advanced video production course focusing on electronic field production (EFP). This course features technical and creative aspects of directing, camera work, editing, and lighting. Lecture, three hours; laboratory, one hour per week. Prereq: MAS 312 or TEL 312 or consent of instructor.
- MAS 420 ELECTRONIC MEDIA CRITICISM.** (3)
Examination of each of several critical theories and approaches to the criticism of telecommunications program content. Practical experience in evaluating critical writing and in the writing of critical pieces. Prereq: Media Arts & Studies major or minor status or consent of instructor.
- *MAS 422 MULTIMEDIA II.** (3)
This is an advanced course in computer-based interactive multimedia design and development. It aims to expand your knowledge of, and extend your ability to author, Web applications integrating sound, graphic, video, text, animation, and interactive components for education, entertainment, and business purposes. Lecture, two hours; laboratory, two hours per week. Prereq: MAS 322 or consent of instructor.
- MAS 425 SOCIAL ENTREPRENEURSHIP FOR MEDIA.** (3)
This course focuses on social entrepreneurship and how social entrepreneurs facilitate social change using media. The concepts of social entrepreneurship explored in the course include communication, innovation, performance criteria, target market, launch, management and scale.
- MAS 432 AUDIO PRODUCTION.** (3)
Elements of audio production, including basic machines, microphones, patch panels, the production mixing. Different audio products are discussed. Lecture, two hours; laboratory, two hours per week. Prereq: Media Arts & Studies major or minor status or consent of instructor.
- MAS 435 THE HISTORY OF VIDEO GAMES AND THE INDUSTRY.** (3)
Provide an overview of the video game industry. The course focuses on a chronological understanding of the history of the video game industry, including key moments in the rise and fall (and the rise again) of the industry and an examination of the technological advances in both software and hardware. Prereq: MAS major or minor status or consent of the instructor.
- MAS 455 MUSIC INDUSTRY MANAGEMENT.** (3)
This course provides an overview of the business of the music and recording industry, including the songwriting market, music publishing, music copyright, music licensing, unions, agents and attorneys, artist management, concert promotion, music merchandising, the record industry, record markets, recording contracts, record distribution and merchandising, studios and engineers, music in television, radio and advertising, music in films, and career development and options. Students will be introduced to industry professionals and may participate in promoting and producing a music event. Prereq: Media Arts and Studies major or minor status or consent of instructor.
- MAS 482 ELECTRONIC MEDIA SALES MANAGEMENT.** (3)
The data and techniques of radio and television advertising, including problems of coverage and circulation, spot campaigns, testing, time buying, the agency, measuring broadcast effectiveness, merchandising radio and television advertising and time selling. Prereq: Media Arts & Studies major or minor status or consent of instructor.
- MAS 490 SPECIAL TOPICS IN MEDIA INDUSTRY STUDIES (Subtitle required).** (3)
Course will focus on selected topics in the study of media industries. Course will be offered on demand. May be repeated to a maximum of six credits under a different subtitle. Prereq: Media Arts & Studies major or minor status or consent of instructor.
- MAS 505 MEDIA AND POPULAR CULTURE.** (3)
A study of the interplay of communication media and popular culture. The course examines conceptual approaches to the production, forms, meanings, and influences of technologically mediated culture. The scope of the course includes the popular texts produced by the commercial media and entertainment industries as well as user-generated content circulated in online media.
- MAS 520 SOCIAL EFFECTS OF THE MASS MEDIA.** (3)
An examination of the political, social, cultural and behavioral effects of telecommunications systems in American society. Focus on theory and empirical research generated since 1940. Prereq: MAS 300 or TEL 300 or consent of instructor.
- MAS 530 PRO-SEMINAR IN TELECOMMUNICATIONS.** (3)
Discussion and reports on current trends in telecommunications industries and the behavioral, political and regulatory implications attending such trends. Prereq: Media Arts & Studies major or minor status or consent of instructor.
- MAS 535 TELECOMMUNICATIONS NETWORK MANAGEMENT.** (3)
The primary focus of this course is the design and management of telecommunications networks and resources. In a framework that includes both the technical and business aspects of telecommunications, the course examines the capabilities and limitations of a wide range of data network technologies in the context of needs assessments, design, implementation, and evaluation; the relative advantages and disadvantages of various technological configurations for specific business purposes; and the impact of human and organizational factors in network design. Prereq: Media Arts & Studies major or minor status or consent of instructor.
- MAS 540 SOCIAL MEDIA THEORY AND PRACTICE.** (3)
This course examines the contexts and forms of a variety of social media platforms and applications, and interrogates the influence of social media on individuals, organizations, institutions, and society. It explores a variety of important conceptual and practical issues in relation to social media use and applications. Prereq: Media Arts & Studies major or minor status or consent of instructor.
- MAS 555 THE INTERNET AND SOCIAL CHANGE.** (3)
An critical examination of the political, cultural, technological, social, and behavioral aspects of Internet-mediated communication. Emphasis on research literature and theory on emerging platforms of new media technologies and applications. Prereq: MAS 300 or TEL 300 or consent of instructor.
- MAS 560 VIDEO GAME STUDIES.** (3)
This course offers a critical overview of current scholarship and debates surrounding video games and game players. Topics include the video game industry, culture of gameplay, video game narratives, uses and effects of games, controversial issues, the game production pipeline, and career opportunities. Prereq: Media Arts & Studies major or minor status or consent of instructor.
- MAS 590 SPECIAL TOPICS IN SOCIAL-CULTURAL MEDIA STUDIES (Subtitle required).** (3)
Course will focus on a single topical issue in the theory, research, and criticism of electronic media. Course will be offered on demand. May be repeated to a maximum of six credits under a different subtitle. Prereq: Media Arts & Studies major or minor status or consent of instructor.
-
- MAT Merchandising, Apparel and Textiles**
- MAT 114 INTRODUCTION TO MERCHANDISING.** (3)
An introduction to merchandising with emphasis on apparel and textiles. Examination of industry structures which facilitate the development, manufacturing, marketing and merchandising of goods and services in the domestic and international marketplace.
- MAT 120 TEXTILES FOR CONSUMERS.** (3)
A study of textiles with emphasis on consumer applications. Properties of fibers, yarns, fabric structures, colors, and finishes related to end use. Survey of legislation and of maintenance requirements.

Course Descriptions

MAT 237 AESTHETIC EXPERIENCE IN RETAIL. (3)

An introduction to design and aesthetic principles as they are applied to promotional procedures of retail and wholesale organizations including methods of visual merchandising, special event promotion and public relations. Prereq: MAT 120 or consent of instructor.

***MAT 247 DRESS AND CULTURE. (3)**

A study of the social, cultural, physical, and psychological factors which influence apparel and apparel use in contemporary society.

MAT 315 MERCHANDISE PLANNING AND CONTROL. (3)

Study and application of planning and control strategies and processes essential to profitability in merchandising. Analysis of company and industry merchandising and operating results. Prereq: ECO 201, ECO 202.

MAT 359 SPECIAL TOPIC IN MERCHANDISING, APPAREL AND TEXTILES (Subtitle required). (1-3)

Exploration of topics in the field of merchandising, apparel and textiles. May be repeated to a maximum of six credits. Prereq: Junior standing or consent of instructor prior to registration.

MAT 395 INDEPENDENT STUDY IN MERCHANDISING, APPAREL AND TEXTILES. (1-3)

Problems involving independent laboratory, studio, and/or library study conforming to the student's special interest under the direction of an appropriate faculty member having proficiency in the area selected. May be repeated to a maximum of six credits. Prereq: Consent of instructor and contractual agreement.

***MAT 414 MERCHANDISING STRATEGY ANALYSIS. (3)**

The analysis of environmental, individual, and psychological factors of consumer consumption and their impact on apparel retailer strategic planning. Prereq: MAT 114, ACC 201, MAT 315.

MAT 425 ECONOMICS OF MERCHANDISE SOURCING. (3)

Examination of global sourcing strategies in retail merchandising. Includes assessment of political, social, economic and cultural influences critical to the sourcing process. Prereq: MAT 114, MAT 350, ECO 201, ECO 202, MKT 300, MAT 315.

MAT 480 MERCHANDISING, APPAREL AND TEXTILES STUDY TOUR. (1-3)

A domestic or foreign study tour to include investigation of interests related to merchandising, apparel and textiles. Professional visits are planned according to particular itineraries. Application and payment dates are determined each semester by the instructor. This course may be repeated one time if tour destinations are different. Prereq: Priority is given to majors and upperclassmen. All students are subject to instructor approval.

***MAT 510 BRAND MANAGEMENT. (3)**

Examination of the important issues in planning and evaluating brand strategies with special emphasis on exploring why brands are important, what they represent to consumers and what firms should do to manage them properly. Prereq: Junior Standing, Senior Standing, or Graduate Student and MAT 114.

***MAT 514 RETAIL ENTREPRENEURSHIP. (3)**

Concepts of entrepreneurship within single ownership and other business organizations; development of a business plan; management of a small business; current issues and problems. Prereq: Junior Standing, Senior Standing, or Graduate Student and MAT 114.

MAT 515 SPECIFICATION AND EVALUATION OF TEXTILES AND APPAREL. (3)

The course will focus on product development and quality control in textile products (Apparel and Interiors), by developing specifications and evaluating the quality of a textile product. Prereq: MAT 120, MAT 237.

MAT 520 TEXTILES FOR INTERIORS. (3)

Selection, cost, expected performance and care of textiles used in residential and commercial interiors. Prereq: MAT 120.

MAT 522 HISTORY OF TEXTILES. (3)

Survey of the development of textiles from ancient to modern times. Emphasis on social, economic, technological and political effects on the evolution of textile fibers, fabric structures, color and design. Field trips. Prereq: MAT 120, MAT 247, open to seniors and graduate students only.

MAT 533 HISTORY OF COSTUME. (3)

Development of costume from ancient to modern times with consideration of historic, social, and economic setting. Field trips. Prereq: Open to seniors and graduate students only.

MAT 547 SOCIAL AND PSYCHOLOGICAL ASPECTS OF APPAREL. (3)

An advanced study of the social, psychological factors which influence apparel and apparel use with particular emphasis on research. Prereq: Open to seniors and graduate students only.

MAT 559 SPECIAL TOPIC IN MERCHANDISING, APPAREL AND TEXTILES. (Subtitle required). (1-3)

Advanced in-depth study of merchandising, apparel and textiles. May be repeated to a maximum of six credits. Prereq: Open to seniors and graduate students only.

***MAT 570 ELECTRONIC RETAILING (E-TAILING). (3)**

An educational foundation in e-tail development as a medium for food, apparel, and textile distribution and sales. Prereq: MAT 114, 120, 237, 247, MKT 300, STA 210 or STA 296.

***MAT 572 INTERNATIONAL MERCHANDISING. (3)**

A study of the internationalization of retailing and factors that influence the process in foreign countries such as countries' level of development and how countries' governments are supporting the growth of their retail industries. Social, economic, and environmental perspectives will also be considered as they relate to countries' retail markets and retail trade at the global level. In-depth exploration of key international retailing concepts provides students with the theoretical foundation to explore the international retail landscape in more detail through the study of retail industries in four world regions. Prereq: MAT 315, MKT 320.

MAT 595 INDEPENDENT STUDY IN MERCHANDISING, APPAREL AND TEXTILES. (1-3)

Problems involving independent laboratory, studio, and/or library study conforming to the student's special interest under the direction of an appropriate faculty member having proficiency in the area selected. May be repeated to a maximum of six credits. Prereq: Restricted to seniors and graduate students with contractual agreement.

MAT 650 SURVEY OF CURRENT THEORIES AND LITERATURE. (3)

An intensive survey of the theoretical and empirical literature related to areas of merchandising, apparel, and textiles and to hospitality management and tourism. Emphasis will be placed on research literature and theory building. Prereq: Graduate standing.

MAT 700 RESEARCH PROBLEMS IN INTERIOR DESIGN, MERCHANDISING AND TEXTILES. (3)

Independent research for the exploration of a specific problem in interior design, merchandising and textiles. May be repeated to a maximum of six credits.

MAT 720 RURAL RETAIL DEVELOPMENT. (3)

Characteristics of rural retail development; analysis of economic and related problems and potential for development. Prereq: Graduate student standing.

MAT 759 SPECIAL TOPICS IN MERCHANDISING, APPAREL AND TEXTILES (Subtitle required). (3)

Advanced work on a specific topic in merchandising, apparel, and textiles. May be repeated under different topics to a maximum of 12 credits. Prereq: Graduate Standing or consent of instructor.

MAT 785 INDEPENDENT STUDY IN MERCHANDISING, APPAREL AND TEXTILES. (1-3)

Problems involving independent laboratory, studio and/or library student conforming to the student's special interest under the direction of an appropriate faculty member having proficiency in the area selected. May be repeated to a maximum of six credits. Prereq: Nine credit hours of graduate study, consent of instructor, and contractual agreement.

MAT 790 RESEARCH PROBLEMS IN INTERIOR DESIGN, MERCHANDISING, AND TEXTILES. (3)

Independent research for the exploration of a specific problem in interior design, merchandising, and textiles. May be repeated to a maximum of six credits.

MB Microbiology

MB 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams. (Same as MI 749.)

MB 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

MB 768 RESIDENCE CREDIT FOR MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours. (Same as MI 768.)

MB 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (1-12)

May be repeated indefinitely. (Same as MI 769.)

MBA Master of Business Administration

MBA 600 RAPID IMMERSION IN ACCOUNTING. (3)

An immersive four-week introduction to the use of key financial and managerial accounting statements in analyzing business problems. Open only to students in the daytime MBA track.

MBA 601 RAPID IMMERSION IN DECISION MAKING. (3)

An immersive four-week introduction to the use of key financial and managerial accounting statements in analyzing business problems. Open only to students in the daytime MBA track.

MBA 602 LEADERSHIP. (3)

This course focuses on helping students develop leadership, communication and team building skills. The course is taught throughout the one-year accelerated MBA program and is open only to students in the program.

- MBA 603 MARKETS – STRUCTURE AND DYNAMICS.** (1)
An immersive one-week course that explore how markets work. Open only to students in the daytime MBA track. Prereq: MBA 600, MBA 601 and MBA 602.
- MBA 604 FINANCE.** (2)
This course is designed to increase understanding of the role of information systems in organizations and how they are used by managers. Open only to one year MBA students. Prereq: MBA 600, 601, 602.
- MBA 605 ORGANIZATIONAL STRUCTURES AND STRATEGIES.** (1)
An immersive course that explores firm structures, internal allocation decisions and outsourcing decisions from a variety of social science perspectives. Open only to students in the daytime MBA track. Prereq: MBA 600, 601, 602 and 603.
- MBA 606 MANAGEMENT INFORMATION SYSTEMS.** (1)
This course is designed to increase understanding of the role of information systems in organizations and how they are used by managers. Open only to One Year MBA students. Prereq: MBA 600, 601, 602 and 603.
- MBA 607 MARKETING.** (1)
An immersive course introducing students to the role of marketing within the firm and overviews the components of a marketing plan. Open only to One Year MBA students. Prereq: MBA 600, 601 and 602.
- MBA 608 HUMAN RESOURCES MANAGEMENT.** (1)
An immersive course to familiarize students with topics in Human Resource Management including topics on legal environment, recruitment, selection and compensation. Open only to One Year MBA students. Prereq: MBA 600, 601 and 602.
- MBA 609 MANAGEMENT.** (1)
An experiential-based course that places students in teams that compete in a complex business simulation. Open only to one year students. Prereq: Acceptance in MBA program.
- MBA 610 NEW PRODUCT DEVELOPMENT MARKETING.** (3)
An immersive course examining how market research and marketing strategy aid firms in their management of new product development. Open only to One Year MBA students. Prereq: MBA 600 through MBA 609.
- MBA 611 NEW PRODUCT DEVELOPMENT MANAGEMENT.** (3)
An immersive course which examines how firms manage the new product development or service process. Open only to One Year MBA students. Prereq: MBA 600 through MBA 609.
- MBA 612 BUSINESS FINANCE STRATEGIES.** (5)
An extensive, multidisciplinary examination of the mergers and acquisitions process from the role of the mergers in firm strategy to target identification, acquisition, and absorption issues. Also, covers the basic fundamentals of financial concepts in banking. Open only to students in the daytime MBA track. Prereq: MBA 600, 601, 602, 603, 604, 605, 606, 610 and 611.
- MBA 613 FINANCE IN NEW PRODUCT DEVELOPMENT.** (1)
This course is designed to provide the concepts and techniques used to evaluate products and services in New Product Development. Open only to One Year MBA students. Prereq: MBA 600 through MBA 609.
- MBA 614 STRATEGIC INNOVATION, COMPETITIVE RIVALRY AND GLOBAL STRATEGY.** (3)
This course introduces students to the fundamental concepts, analytical tools, and framework related to the twin challenges of strategic management of innovation and competitive rivalry in the context of the global economy. As such, it serves as a complement to the study of new product development and supply chain management. Prereq: MBA 600 through MBA 609.
- MBA 615 SUPPLY CHAIN STRATEGY.** (3)
An immersive study of the supply chain management involving the management of key business processes, the flow of goods and information, and relationships with fellow members of the supply chain. Open only to One Year MBA students. Prereq: MBA 600 through MBA 614.
- MBA 616 SUPPLY CHAIN OPERATIONS.** (3)
An immersive study of supply chain operations and the discipline of managing and directing physical/technical functions of an organization involving the plan, source, make, deliver and returns function. Open only to One Year MBA students. Prereq: MBA 600 through MBA 614.
- MBA 617 NEGOTIATIONS IN THE SUPPLY CHAIN.** (1)
This course focuses on developing negotiation skills in the supply chain involving the ability to diagnose situations, strategize, plan and engage in fruitful negotiations. Open only to One Year MBA students. Prereq: MBA 600 through MBA 614.
- MBA 618 GLOBAL STRATEGY.** (1)
This course introduces students to the fundamental concepts, analytical tools, and frameworks related to the challenges of globalization and international strategy. Open only to One Year MBA students. Prereq: MBA 600 through MBA 614.
- MBA 619 MANAGERIAL ACCOUNTING IN NEW PRODUCT DEVELOPMENT.** (1)
This course will examine how managerial accounting is employed in the new product development stage. Open only to One Year MBA students. Prereq: MBA 600 through MBA 609.
- MBA 620 RISK MANAGEMENT.** (2)
An examination of financial decision-making about the management of risk by corporations, recognizing the relationship between risk management and the overall goals of the firm. Open only to students in the daytime MBA track. Prereq: MBA 600, 601, 602, 603, 604, 605, 606, 610, 611 and 612.
- MBA 621 NEW VENTURE FINANCE.** (1)
The advantages and disadvantages of the sources of new venture capital are studied from the entrepreneur's and the provider's viewpoints. Open only to students in the daytime MBA track. Prereq: MBA 600, 601, 602, 603, 604, 605, 606, 610, 611 and 612.
- MBA 622 INTERNATIONAL FINANCIAL MANAGEMENT.** (2)
Overview of financial management at the international level. Topics include the structure of international trade and foreign direct investment, foreign exchange markets, and managing currency risk. Open only to students in the daytime MBA track. Prereq: MBA 600, 601, 602, 603, 604, 605, 606, 610, 611 and 612.
- MBA 623 INTERNATIONAL MARKETING.** (2)
An examination of the factors that shape international marketing decisions, including entry strategies, marketing mix decisions and product policies. Open only to students in the daytime MBA track. Prereq: MBA 600, 601, 602, 603, 604, 605, 606, 610, 611 and 612.
- *MBA 624 ENTREPRENEURSHIP AND MANAGEMENT TECHNOLOGY COMMERCIALIZATION.** (3)
This course is a broad overview of the technology commercialization process with a hands-on opportunity to learn commercialization skills in a real world environment that combines theory and practice. It is designed to cover the three primary phases of the commercialization process. The Assessment Module focuses on customer validation and market research, commercialization pathways, intellectual property, legal entities, strategic partnerships, and the business model canvas. The Business Planning Module provides an overview of accounting principles and pro forma statements, business plan elements, management teams and advisory boards, go-to-market strategies, and licensing and royalties. The Capitalization Module focuses on funding strategies including federal and state programs, angel investors and venture capital, crowd funding, and introduction to term sheets and valuation methods, and investor presentations. This course will meet twice per week for 2.5 hours each session for a total of eight weeks. Prereq: MBA Program Standing.
- MBA 625 SALES MANAGEMENT.** (1)
An examination of managerial approaches to the planning, implementation and control of personal contact programs. Open only to students in the daytime MBA track. Prereq: MBA 600, 601, 602, 603, 604, 605, 606, 610, 611 and 612.
- MBA 626 E-COMMERCE.** (2)
A thorough examination of the major issues associated with the development of e-commerce solutions and applications. Open only to students in the daytime MBA track. Prereq: MBA 600, 601, 602, 603, 604, 605, 606, 610, 611 and 612.
- MBA 627 GLOBAL BUSINESS MANAGEMENT.** (2)
Open only to students in the daytime MBA track. Prereq: MBA 600, 601, 602, 603, 604, 605, 606, 610, 611 and 612.
- MBA 628 TECHNOLOGY MANAGEMENT.** (2)
An examination of the management of technology, especially the critical role of technology as a strategic resource to enable management to achieve firm objectives. Topics include the technology life-cycle, technology forecasting, and emerging technologies. Open only to students in the daytime MBA track. Prereq: MBA 600, 601, 602, 603, 604, 605, 606, 610, 611 and 612.
- MBA 630 PROFESSIONAL DEVELOPMENT.** (1)
Students complete five short modules to enhance their interpersonal, implementation or analytic skills. Topics vary by year. Open only to students in the daytime MBA track.
- MBA 640 PROJECT CONNECT I.** (4)
An immersive 16-week internship with a Project Connect partner. Open only to one-year MBA students.
- MBA 642 PROJECT CONNECT II.** (4)
An immersive 16-week internship with a Project Connect partner. Open only to one-year MBA students.
- MBA 644 PROJECT CONNECT IN MERGERS AND ACQUISITIONS.** (1)
An immersive five week internship with a Project Connect Partner where the student will work on an M&A project. Open only to One Year MBA students. Prereq: MBA 600 through MBA 618.
- MBA 650 MBA CAPSTONE COURSE.** (2)
This course is designed to culminate the one-year MBA program. The course is themed to cover a current, critical topic incorporating knowledge gained throughout the program. Prereq: MBA 600 through 612.

MC Medical Center**MC500 INTERNATIONAL SERVICE-LEARNING. (1-12)**

This course is designed to introduce students to the theories, concepts, and practices of service-learning in an international setting. Service-learning engages the student in enhancing the common good through the application of learning to service. (Same as EXP 510.)

MCL Modern and Classical Languages, Literatures and Cultures**MCL 100 THE WORLD OF LANGUAGE. (3)**

This course introduces students to some of the objects and methods of inquiry common to the different language areas and fields of study in the Department of Modern and Classical Languages, Literatures and Cultures. Students will examine the structure and use of spoken language and written language as well as their sociocultural aspects and explore basic linguistic principles, the roles and function of language, and issues involved in first- and second-language acquisition. In the process they will develop a facility and vocabulary for the examination of the principal structures involved in systems of spoken and written language.

MCL 135 VAMPIRES: EVOLUTION OF A SEXY MONSTER. (3)

This course answers the following questions: What is a vampire? Where do they come from? Why do we have an obsession with the walking dead, especially with fanged monsters? How do we get rid of them (or attract them)? The course will explore the origin of the vampire in Slavic folklore and trace the movement of the legend across Europe into literature and then finally into today's films and pulp fiction. We will learn about the legends, rituals and folk religious beliefs associated with the vampire phenomenon and how they have been interpreted over the centuries by various peoples. We will explore the myriad of approaches to the vampire from psychology, folkloristics, literature, physiology and anthropology. Taught in English.

MCL 190 TOPICS IN MODERN AND CLASSICAL LANGUAGES, LITERATURES AND CULTURES (Subtitle required). (3)

Examination of a topic related to literary studies, cultural studies, or aspects of language. The course may be dedicated to the literature, culture or language of a particular group or nation or may compare literatures, cultures and languages. May be repeated up to 6 credits under different subtitles.

MCL 200 GLOBAL LITERACY. (3)

A humanities course for the 21st century; this class "goes global" in unprecedented ways. Team taught by expert instructors representing ten different linguistic and cultural traditions (Arabic, Chinese, French, German, Ancient Greek, Hebrew, Italian, Japanese, Ancient Roman, Russian), it trains students in the analysis of a wide range of media (literary text, folk text, still image, film, etc.) that challenge cultural identities and cross national boundaries. Meets requirements for UK Core in the Humanities.

MCL 270 INTRODUCTION TO FOLKLORE AND MYTHOLOGY. (3)

Introduces the forms and functions of folklore and mythology, with particular emphasis on the Americas. Folklore opens up questions about the relationship of tradition to modernization, individualism, and community. The course explains how folklore is fundamental to human lives and relates these cultural traditions to identities and values in contemporary society. We give attention particularly to methods of ethnography and field collection to uncover symbols, structures, and functions in expressive culture. Satisfies the UK Course Intellectual Inquiry in the Humanities or Intellectual Inquiry in the Social Sciences requirement.

MCL 300 CONTACT ZONES: CULTIVATING INTERCULTURAL COMPETENCE. (3)

This course aims to help students acquire skills and knowledge needed to promote understanding of individuals/groups from diverse backgrounds, without reinforcing stereotypes in the name of "cultural difference." Toward this end, this course will (1) utilize, as a guide/lead, the concept of "contact zones," zones of exchange that divide but simultaneously connect "us" and "them"; and (2) have each student conduct a semester-long ethnographic project concerning the contact zone. Prereq: Students must have completed 30 hours of course work and completed the UK Core Composition and Communication I and II requirement before enrolling in MCL/SPA 300. (Same as SPA 300.) This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

MCL 311 AUTOBIOGRAPHY AND WORLD LITERATURE. (3)

This course will examine and compare literary autobiographical writings (defined broadly to include text and image) from Asian and European historical traditions. In addition to learning to read and interpret autobiographies as literature, this course will consider the process of creating a literary self through activities and exercises designed to engage with the stylistic elements of autobiography as literature.

#MCL 312 THE ART OF ADAPTATION. (3)

This course introduces students to the theory and practice of adaptation. By studying several famous examples of literary and filmic adaptations, students will examine critically the primary criteria and constraints involved in narrative adaptation. With these examples serving as models, students will produce, in the form of brief stage- and/or screenplays, their own creative adaptations of classic narrative works (stories, tales, myths, folklore, films, etc.).

MCL 324 THE CITY IN THE TWENTIETH-CENTURY: TOKYO, SHANGHAI, PARIS. (3)

What does it mean to live somewhere else? This course examines three of the world's greatest cities. These cities share a rich history of mutual influence and imagination, with artists from each city creating work that represents the other. We will look at the three different distinct languages and culture to examine how city life and urbanity has been discussed, in general, and then how it has been imagined in the Japanese, Chinese, and French traditions.

#MCL 335 DEMOCRACY – ANCIENT AND AMERICAN. (3)

This course asks students to think critically about the concept of democracy by close examination of the first flowering democracy in ancient Athens, its ancient critics, and comparison to their own experience of contemporary American democracy. Fundamental issues that will engage the students' discussion and writing include: socioeconomic class, individual rights, the scope of government, justice, and democracy and imperialism. Students will develop and articulate their own evaluation of the advantages and disadvantages of democratic government.

MCL 343 GLOBAL HORROR. (3)

Global Horror is an introduction to the horror film that traces the genre's development from its origins in European literature to a global film phenomenon in the 21st century.

MCL 360 CATASTROPHES AND CALAMITIES IN THE GRECO-ROMAN WORLD AND AFTERWARDS. (3)

The participants in the course will get acquainted, by reading the ancient sources in English translation, with some of the greatest catastrophes and calamities in the Greco-Roman world as described by ancient authors. These events will be considered in the historical and cultural context in which they have occurred. Special attention will be paid to the ways in which ancient people reacted to, explained, and tried to accept these calamities. Course participants will also explore, using archival material mainly from newspapers and periodicals, similar calamities that happened in the modern and indeed in the contemporary world. They will reflect on modern and contemporary reactions to adversity, and analyze disasters in the light of different conceptualizations of the moral and cosmological contexts of such events. This will involve discussion of distinct and opposing interpretive perspectives and schools of thought. Comparing the ancient and the modern attitudes will be an important part of the course. The course will also take in consideration human approaches to calamities represented in some motion pictures.

***MCL 375 LANGUAGE STUDY ABROAD. (1-3)**

This course will be used to award credit to UK students studying languages other than English, Spanish, or Portuguese at a recognized university or language institute outside the United States where the primary language of instruction is not English. MCL 375 will be awarded for courses that focus on language acquisition/development of language skills or linguistic knowledge and for which there is no clear UK equivalent. Prereq: UK student in good standing with two years (4 semesters) or equivalent of language study completed can receive credit for MCL 375. This is intended as upper-division language instructional credit. May be awarded up to 12 credit hours total in the same or different semesters.

***MCL 376 CULTURAL STUDIES ABROAD. (1-3)**

This course is used to award credit to UK students studying a language other than English, Spanish, or Portuguese at a recognized University or language institute outside the United States where the primary language of instruction is not English. MCL 376 will be awarded for courses that focus on the culture of the host country and/or countries sharing the same language and for which there is no clear UK equivalent. These may be literature, film, media and other such courses as commonly taught within MCL. Prereq: UK student in good standing with two years (4 semesters) or equivalent of language study completed can receive credit for MCL 376. This is intended to be upper-division culture instruction in the target language (i.e. French Literature courses taught in French, Chinese Art History classes taught in Chinese). Credit may be awarded up to 12 hours in the same or different semesters.

MCL 390 TOPICS IN MODERN AND CLASSICAL LANGUAGES, LITERATURES AND CULTURES (Subtitle required.) (3)

Examination of a topic related to literary studies, cultural studies, or aspects of language. The course may be dedicated to the literature, culture or language of a particular group or nation or may compare literatures, cultures and languages. May be repeated up to 6 credits under different subtitles. This course counts as an elective for the MCL major. Prereq: Determined by instructor.

MCL 495 MODERN AND CLASSICAL LANGUAGES, LITERATURES AND CULTURES CAPSTONE. (3)

MCL Capstone Research Project and Language Learning Portfolio, MCL 495, is a common Capstone experience shared by MCL majors in Arabic, Classics, Chinese, French, German, Japanese, and Russian. It is designed to provide an opportunity for majors to develop research projects in collaboration with faculty members and to gain research experience in MCL Studies, as well as to allow majors to explore the various content areas and scholarly approaches represented in MCL so as to enhance their understanding of the value of work across disciplines. In addition, the course facilitates student completion of a language learning portfolio to document their level of proficiency in one of the fields of concentration in MCL Studies. Prereq: Declared major in one of the fields of concentration in the MCL major Senior standing (>90 credit hours). (Exceptions to these prerequisites must be approved by the Director of Undergraduate Studies.) This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

MCL 510 TEACHING METHODS:**YOUNG LEARNERS AND BEGINNING LEVEL STUDENTS. (3)**

The primary purpose of this course is to acquaint pre- and in-service teachers with the theoretical background and instructional strategies to effectively instruct second language learners who are younger (ages K - 6) and/or beginning level proficiency. The course is guided by the national standards for the five areas of second language acquisition for elementary learners as defined by the National Standards for Language Learning. Prereq: Admission into MATWL or TESL Programs.

MCL 517 SECOND LANGUAGE ACQUISITION. (3)

This course will offer students a survey of the primary concepts and phenomena that relate to the study of Second Language Acquisition (SLA) where second has reference to languages acquired after the first, or native, language. This course will provide a cursory look at a number of linguistic, psycholinguistic, and sociolinguistic issues at the heart of second language learning, as well as an overview of the complex processes and mechanisms that drive that learning. However, findings from SLA research may inform practices in second and foreign language education and, thus, will be included in class discussions when appropriate.

MCL 525 CRITICAL ISSUES IN ASIAN STUDIES. (3)

This course is designed as an introduction to scholarly approaches in Asian Studies for students who are beginning graduate studies and to advanced undergraduates. This course will introduce crucial moments in the development of the field of Asian studies. It focuses on some of the central problems, the major debates, and intellectual discussions that have shaped and continue to shape the scholarly, critical study of Asia. The course will prepare students to assess Asia as a region, as a history, as a discourse, and as a site of lived experiences, and to engage in the issues associated with its study. The seminar will consider the fundamental questions in the study of Asia: What is Asia? How do we approach its study? What are the issues determining our study of it? We will discuss the historical forces that have affected popular and scholarly thinking about "Asia." The skills emphasized in the course are common to good scholarship in many fields: the ability to evaluate research, methodology, and approach using critical discursive and rhetorical skills, and the ability to craft a written essay with a clear and persuasive argument. Students are encouraged to think about the commonalities and differences among different disciplinary approaches to Asia as well as the specific history and interdisciplinary character of Asian Studies.

MCL 575 INTRODUCTION TO LINGUISTICS AND LANGUAGE STRUCTURE. (3)

This course provides an introduction to the field of linguistics, with a focus on the major subfields of linguistics: phonetics (the sounds of language), phonology (the sound structure of language), morphology (the structure of words), and syntax (the structure of sentences). The class explores the relevance of linguistics for language teaching and careers in education. The English language will be the primary, but not exclusive, focus in this class.

MCL 591 LANGUAGE PRACTICUM (Subtitle required). (1-3)

This Language Practicum course provides students the opportunity to engage in structured, focused, target-language work in a specific topic or area that is the subject of a corresponding MCLLC course taught in English in the same semester. Students must be enrolled in the English-medium course to which this Language Practicum corresponds in order to be eligible for enrollment in this Practicum. The Practicum is intended to complement the English-medium course through a combination of target-language activities, including (but not limited to): reviewing terminology and concepts in the target language, summarizing English course discussions in the target language, supplementing English-language readings and other materials with parallel target-language materials. Course may be repeated up to 5 times for credit with different subtitles and tied to different English-medium courses. Prereq: A minimum of two years of college-level work or equivalent training in the target language or consent of instructor; concurrent enrollment in the corresponding MCLLC English-language course.

MCL 592 RESEARCH PRACTICUM (Subtitle required). (1-3)

In this course students engage in directed research designed to broaden and deepen their expertise in a specific research area, and to extend and refine their investigative and research skills. The research work may be performed alone or as a part of a team, and the research focus may include (but is not limited to): an independent topic/project in the students' area(s) of study; a topic/project closely connected with an upper-level seminar in which the students are currently enrolled; or a topic/project within the research agenda of the faculty member offering the course. The research performed in this course will result in a report to be published or presented in an appropriate public research venue (departmental symposium; campus-wide research publication or presentation; professional conference or publication; etc.). Course may be taken for up to 9 credits, with either multiple projects or a longer-term, ongoing single project. Prereq: Junior standing or higher (or consent of instructor).

MCL 593 INTERNSHIP. (1-6)

In this course students engage in an internship under the supervision of a faculty member. The course is intended to help students apply, reinforce, and extend what they have learned in the classroom for their professional development. The production of a portfolio, project, or other form of summative work will allow the students to reflect on the semester's work in a focused synthesis. 10 hours of internship per week (150 hours in a semester) are generally equated with 3 credit hours. Course may be repeated up to 12 credit hours. Prereq: Creation of a learning contract for the internship with the supervising faculty member.

MCL 595 TOPICS IN FOLKLORE AND MYTH (Subtitle required). (3)

An in-depth investigation of some aspect of folk culture (including artifacts, oral literature or rituals) and/or mythology with emphasis on a specific topic within a single cultural context or across cultures, e.g., the legend in European society, Chinese folklore in contemporary film,

etc. MCL majors and graduate students will be expected to conduct part of their research in the target language. May be repeated up to six credits with different subtitles. Prereq: MCL 270.

MCL 596 TOPICS IN CULTURE (Subtitle required). (3)

This course is designed to introduce a variety of critical approaches used in the study of culture. The overall objective is to explore how culture, in all its various forms, not only reflects the world around us but also how it influences the way we perceive the world. The course examines images in various media such as film, text, music, etc. The course employs a wide range of critical approaches (such as genre theory, gender studies, semiotics, and political economy) and examines multiple cultures from Europe to Asia. MCL majors and graduate students will be expected to conduct research in the target language. May be repeated up to six credits with different subtitles. Provides MCL Major Elective credit and MCL minor credit.

MCL 597 TOPICS IN COMPARATIVE LITERARY STUDIES (Subtitle required). (3)

The purpose of this course is to explore the nature of the literary as an aesthetic, historical, and social category in a comparative context. Topics to be considered include: definitions of literature; literary studies as an academic discipline; theories of literary meaning; the connections between literature and identity (including national identity) and the relative usefulness of these connections; cross-cultural and cross-historical concepts of literary art. MCL majors and graduate students will be expected to conduct research in the target language. May be repeated up to six credits with different subtitles. Provides MCL Major Elective credit and MCL minor credit. Prereq: Consent of instructor.

MCL 598 TOPICS IN LINGUISTICS (Subtitle required). (3)

An in-depth investigation of topics in the fields of theoretical and/or applied linguistics with emphasis on a particular country/region/linguistic population, language or language group. Possible topics include: history of a language or language group; sociolinguistics of a language or language group(s); structure of a language or language group; phonetics, phonology, morphology, syntax, semantics, pragmatics or discourse analysis of a language and/or its dialects; acquisition of pragmatic, cultural and/or communicative competence in a language. MCL majors and graduate students will be expected to conduct part of their research in the target language. May be repeated up to six credits with different subtitles. Prereq: Consent of instructor. MCL 598 will be taught at the same time and in the same place as LIN 517.

MCL 601 WORLD LANGUAGE TEACHING INTERNSHIP P-12. (12)

Three-credit hour Seminar taught in conjunction with a 14-week P-12 teaching Internship. Students will be interning in local schools and meeting once a week to discuss various aspects of their teaching needs and progress as well as issues encountered during their teaching experience. Prereq: EDP 500/600, EDC 610, EDS 600, MCL 510, and MCL 610.

MCL 610 L2 TEACHING METHODS: 9-12, ADULT AND ADVANCED LEARNERS. (3)

This course is focused on current approaches, strategies and techniques in second language teaching, with a particular emphasis on intermediate and advanced language learners and adolescent or adult students. It is also a practicum course, so all students must have access to a second language classroom and learners in order to engage course concepts in an actual classroom setting.

MCL 650 TOPICS IN INTERCULTURAL TEACHING: (Subtitle required). (3)

Seminar on teaching intercultural topics from the perspective of world languages and cultures. The course will provide based in depth analysis of one area of intercultural teaching. Topics may include how to teach arts and humanities courses and/or units using folk and fairy tale traditions, multicultural and world cinema, comparative art and architecture, or musical and theatrical traditions. Focus will be on methods of teaching in primary and secondary schools. Taught in English. May be repeated to a maximum of six credits. Prereq: Enrollment in the Master's in Teaching World Languages program, a world languages program, or permission of the instructor.

MCL 665 SECOND LANGUAGE CURRICULUM AND ASSESSMENT. (3)

This course is designed for second language teachers who would like to learn more about curriculum design and assessment. The course will prepare students to analyze differing models of second language (L2) curriculum and standards and design their own curriculum appropriate for a particular educational context. A variety of assessment instruments are studied including standardized proficiency exams and formative and summative assessment instruments as well as alternative assessments such as portfolios.

MCL 690 CULTURE, COGNITION AND SECOND LANGUAGE LEARNING. (3)

This course is designed to engage class participants in the study of learning and teaching in the second language classroom through the study of sociocultural perspectives on second language learning and an exploration of current theories of human cognition and learning. At the heart of the course lies a field based research project in which students investigate their own teaching practices, with the primary focus of their inquiry on direct student-teacher interaction and its impact on learning (micro genesis) The goal is to help students examine their own teaching practices and generate new teaching strategies and techniques.

MCL 696 ADVANCED TOPICS IN CULTURE (Subtitle required). (3)

This course is designed to introduce a variety of critical approaches used in the study of culture. The overall objective is to explore how culture, in all its various forms, not only reflects the world around us but also how it influences the way we perceive the world. The course examines images in various media such as film, text, music, etc. The course employs a wide range of critical

approaches (such as genre theory, gender studies, semiotics, and political economy) and examines multiple cultures from Europe to Asia. This course will require advanced, in-depth theoretical and critical approaches to the material. May be repeated up to six credits with different subtitles. Prereq: Graduate standing and consent of instructor.

MCL 697 ADVANCED TOPICS IN COMPARATIVE LITERARY STUDIES (Subtitle required). (3)

The purpose of this course is to explore the nature of the literary as an aesthetic, historical, and social category in a comparative context. Topics to be considered include: definitions of literature; literary studies as an academic discipline; theories of literary meaning; the connections between literature and identity (including national identity) and the relative usefulness of these connections; cross-cultural and cross-historical concepts of literary art. Students will do research in the original language of their area of focus. This course will require advanced, in-depth theoretical and critical approaches to the material. May be repeated up to six credits with different subtitles. Prereq: Graduate standing and consent of instructor.

MCL 698 ADVANCED TOPICS IN LINGUISTICS (Subtitle required). (3)

An in-depth investigation of topics in the fields of general and/or applied linguistics with emphasis on a particular country/region/linguistic population, language or language group. Possible topics include: history of a language or language group; sociolinguistics of a language or language group(s); structure of a language or language group; phonetics, phonology, morphology, syntax, semantics, pragmatics or discourse analysis of a language and/or its dialects; acquisition of pragmatic, cultural and/or communicative competence in a language. This course will require advanced, in-depth theoretical and critical approaches to the material. Students will be expected to conduct part of their research in the target language of their area of study. May be repeated up to six credits with different subtitles. Prereq: Graduate standing and consent of instructor.

MD Medicine (M.D. Program)

MD 800 SPECIAL TOPICS COURSE. (0-4)

This special topics course will be used for students who must complete activities outside of the medical curriculum in order to meet graduation requirements. In particular, students who must complete prescribed remediation that does not involve repeating a formal course or who must complete licensing exams in order to graduate would use this mechanism. Additionally, this course could be used for student research activities. Prereq: Permission of the Dean of the College of Medicine.

MD 810 FOUNDATIONS OF INFECTION, DISEASE AND THERAPEUTICS. (10)

This course covers basic mechanisms that underlie many of the organ specific diseases, with a focus on biochemistry, genetics, infections, immune mechanisms of disease, inflammation and neoplasia. It will also discuss treatment of these entities and provide basic information on pharmacokinetics and pharmacodynamics. Prereq: Admission to Medical School (first year).

MD 811 INTRODUCTION TO CLINICAL MEDICINE. (8)

The goal of the Introduction to Clinical Medicine (ICM) course is to provide students with opportunities to develop knowledge, skills, and attitudes about the doctor/patient relationship that are necessary to practice patient-centered and evidenced-based care. Prereq: Admission to the College of Medicine.

MD 813 BEHAVIORAL BASIS OF MEDICINE. (3)

The Behavioral Basis of Medicine delivers key concepts from Psychiatry, Pharmacology and Behavioral Science in a mostly lecture-based format. Students are introduced to psychiatric conditions, to the observations that lead to a psychiatric diagnosis, and to some of the pharmacologic, psychotherapeutic and psychosocial modes of treatment. Prereq: Admission to Medical School (first year).

MD 814 ANATOMY. (9)

This course consists of lecture, small group, laboratory, and team based learning exercises that provide a basic understanding of anatomical principles, organization and development as well as the core principles of histology. Anatomical structures are introduced as a basis for future functional correlates and principles are taught via laboratory discussion, prosections, dissections, films, and skeletal materials. Lecture, 20 hours per week. Prereq: Admission to Medical School (first year).

MD 816 HEMATOLOGIC AND LYMPHATIC SYSTEMS. (4)

As part of the first-year organ system-based curriculum, this course covers the normal structure, development and function of the components of the hematopoietic and lymphoreticular systems; the pathophysiology of hematologic and lymphatic diseases and disorders; and the medical and pharmacologic approaches to diagnosis and treatment. Prereq: Admission to medical school (first year).

MD 817 NEUROSCIENCES. (8)

This course is an integrated presentation of relevant topics in human neuroanatomy, neurophysiology, neuropathology, neuropharmacology, and some microbiology as well as introductory correlations with neurology. Teaching methodology includes lecture, small group discussion, laboratory and self-study units. Lecture, 20 hours per week. Prereq: Admission to Medical School (first year).

MD 818 MUSCULOSKELETAL AND INTEGUMENTARY SYSTEMS. (5)

As part of the first-year organ system-based curriculum, this course covers the normal physiology and histology of the musculoskeletal/integumentary systems, the pathophysiology of diseases and disorders of these systems, and the medical and pharmacologic approaches to diagnosis and treatment. Prereq: Admission to Medical School (first year).

#MD 820 CONTEMPORARY PRACTICE OF MEDICINE. (2)

The overall goal of the course is for students to develop a deeper understanding of the interconnected issues that influence the health of populations and how to analyze approaches to improve health. This course uses current public health issues to understand evidence-based medicine and public health interventions. Prereq: Promotion to the second year of the M.D. program.

***MD 821 ADVANCED CLINICAL MEDICINE. (4)**

This course serves as a bridge between the basic and clinical sciences by teaching students the knowledge and skills necessary to develop into excellent diagnosticians. The course focuses on the following skills: the ability to interpret history and physical examination findings, integrate basic laboratory and radiographic data, and formulate a differential diagnosis. Learning activities include: formal lectures, textbook readings, small group tutorials, preceptorships, workshops, online modules, and written and practical testing. Prereq: Promotion to second year of M.D. program.

MD 822 MUSCULOSKELETAL AND INTEGUMENTARY SYSTEMS. (6)

As part of the second-year organ system-based curriculum, this course covers the normal physiology and histology of the musculoskeletal/integumentary systems, the pathophysiology of diseases and disorders of these systems, and the medical and pharmacologic approaches to diagnosis and treatment. Learning activities include lecture, dissection laboratory, panel discussion, small groups/team based learning, and clinical correlations. Prereq: Promotion to the second year of the M.D. program.

MD 823 HEMATOLOGIC AND LYMPHATIC SYSTEMS. (3)

As part of the second-year organ system-based curriculum, this course covers the normal structure, development, and function of the components of the hematopoietic and lymphoreticular systems; the pathophysiology of hematologic and lymphatic diseases and disorders; and the medical and pharmacological approaches to diagnosis and treatment. Learning activities include lectures, labs, self-directed study, workshops and small groups. Prereq: Promotion to the second year of the M.D. program.

***MD 824 ENDOCRINE AND REPRODUCTIVE SYSTEMS. (6)**

As part of the second-year organ system-based curriculum, this team-taught course covers the normal physiology and histology of the endocrine and reproductive systems, the pathophysiology of diseases and disorders of these systems, and the medical and pharmacologic approaches to diagnosis and treatment. This course also covers the normal physiologic and developmental processes that accompany the transition from fetus (intrauterine) to newborn (extrauterine). Prereq: Promotion to the second year of the M.D. program.

MD 825 RENAL AND URINARY SYSTEMS. (4)

As part of the second-year organ system-based curriculum, this team-taught course covers the normal physiology and histology of the kidney and urinary system, the pathophysiology of renal and urinary diseases and disorders, and the medical and pharmacologic approaches to diagnosis and treatment. Prereq: Promotion to the second year of the M.D. program.

MD 826 CARDIOVASCULAR SYSTEM. (5)

As part of the second-year organ system-based curriculum, this course will cover the normal structure and physiologic function of the cardiovascular system, the pathophysiology of common disorders and diseases of the heart and vascular system, and the medical and pharmacologic approaches to diagnosis and treatment. Prereq: Promotion to the second year of the M.D. program.

MD 827 RESPIRATORY SYSTEM. (5)

As part of the second-year organ system-based curriculum, this course covers the normal structure and function of the respiratory system, the immunology and pathophysiology of respiratory diseases and disorders, and the medical and pharmacologic approaches to diagnosis and treatment. Prereq: Promotion to the second year of the M.D. program.

***MD 828 GASTROINTESTINAL SYSTEM AND NUTRITION. (5)**

As part of the second-year organ system-based curriculum, this course covers the normal histology, anatomy and physiology of the gastrointestinal system, the pathophysiology of gastrointestinal diseases and disorders, and the medical and pharmacologic approaches to diagnosis and treatment. The course also includes instruction on the principles of nutrition. Prereq: Promotion to the second year of the M.D. program.

MD 829 MULTISYSTEM AND INTEGRATIVE CONCEPTS. (3)

This course serves as the capstone course for the first- and second-year organ system-based curriculum. Students synthesize and apply the knowledge and concepts learned on an organ-based level to the multisystems level. Prereq: Promotion to the second year of the M.D. program.

MD 830 PEDIATRICS. (8)

This clinical course would provide an opportunity for students to care for the pediatric patient in multiple settings, including inpatient wards, newborn nursery and in the primary care setting. Students participate in patient-centered teaching. Students interview, examine, and formulate treatment plans for patient problems under the direct supervision of their residents and faculty

preceptors. Laboratory, 40 hours per week. Prereq: Admission to third year of medical curriculum.

MD831 INTERNAL MED/EM MED INTEGRATED CLERKSHIP. (4)

This course will provide students with an introduction to the field of Emergency Medicine, Emergency Medical Services (EMS), and the approach to the acutely ill or injured patient. The students will complete an ACLS class during this rotation. Clinical, 40 hours per week. Prereq: Admission to third year of medical curriculum.

MD832 CLINICAL NEUROSCIENCE: NEUROLOGY. (4)

The course will diagnose the common, acute, and emergency problems of disease of the central nervous system. Prereq: Completion of 2nd year of medical school.

MD833 CLINICAL NEUROSCIENCES/PSYCHIATRY. (4)

This course provides opportunity for third year medical students to recognize, treat, and understand the etiology and pathology of common psychiatric disorders and emergencies. Laboratory, forty hours per week. Prereq: Admission to third year of medical curriculum.

MD834 PRIMARY CARE/FAMILY AND COMMUNITY MEDICINE. (4)

This course introduces third year medical students to primary care family practice in rural and urban settings. Students participate in patient-centered teaching during which they work with primary care Family Physicians seeing ambulatory patients in their offices. Students are allowed to interview, examine, and formulate treatment plans for patient problems under the direct supervision of their faculty preceptors. Prereq: Admission to third year of medical curriculum.

MD835 INTERNAL MEDICINE/EMERGENCY MEDICINE INTEGRATED CLERKSHIP. (12)

This course is an introduction to the concepts of internal medicine in both inpatient and outpatient settings. Students interview, examine and formulate treatment plans for patient problems under the direct supervision of faculty preceptors. The course will use didactics, computer simulated problems as well as clinical material and experiences to integrate basic sciences into the practice of medicine. Clinical, 40 hours per week. Prereq: Admission to third year of medical curriculum.

MD837 MEDICAL SURGICAL CARE/SURGERY. (8)

This course is an introduction to the concepts in surgery. It is designed around the principles of Problem Based Learning to help students solve complex surgical problems. The course will use didactic exercises, computer simulated problems and clinical material and experiences to integrate basic sciences into the practice of medicine and surgery. Laboratory, 40 hours per week. Prereq: Admission to third year of medical curriculum.

MD838 OBSTETRICS AND GYNECOLOGY. (4)

The clerkship will provide an opportunity for students to see the cycle of birth and neonatal care and to observe the mother/infant relationship through the outpatient clinic, labor and delivery, the newborn nursery, and the follow-up examination. Laboratory, 40 hours per week. Prereq: Admission to third year of medical curriculum.

MD840 TRANSITION TO RESIDENCY. (4)

This course is designed to provide fourth year medical students with the foundational knowledge and skills in preparation for the supervised practice of medicine. Students will be divided into small groups dedicated to practice areas to hone the skill specific to their intended area of future practice. Within each group, students will review the foundational science and clinical applications of that knowledge. Simulation using both standardized patients and high fidelity simulators will provide realistic clinical scenarios to practice the wide range of skills necessary for medical practitioners. Prereq: Admission to fourth year of medical curriculum.

MD841 GERONTOLOGY. (4)

This course combines several teaching techniques to provide students with basic skills necessary to care for elderly patients in a variety of clinical settings. Fourth year students participate in a four-week block rotating at locations in Lexington, with emphasis on assessment and rehabilitation. Laboratory, 40 hours per week. Prereq: Admission to fourth year of medical curriculum.

MD842 ADVANCED CLINICAL PHARMACOLOGY AND ANESTHESIOLOGY. (4)

This course uses lectures, interactive small groups, and firsthand experience to introduce anesthesiology as it relates to pharmacology and physiology. The course also teaches pharmacology and therapeutics utilizing clinical cases. Students develop their own personal formularies during the course. Laboratory, 40 hours per week. Prereq: Admission to fourth year of medical curriculum.

MD843 EMERGENCY MEDICINE. (4)

This course will provide the students with an introduction to the field of Emergency Medicine, Emergency Medical Services (EMS), and the approach to the acutely ill or injured patient. The students will complete an ACLS class during this rotation. Laboratory, 40 hours per week. Prereq: Admission to fourth year of medical curriculum. (Same as ER 843.)

MD855 RURAL PHYSICIAN LEADERSHIP PROGRAM (RPLP) COMMUNITY ENGAGEMENT SELECTIVE. (4)

Students are matched with a community partner based on experience, career goals, and agency needs. Students work with the program and the partner sites to develop a project plan that details clinical leadership, scholarly and administrative activities, which are determined based upon learning outcome goals and agency initiatives. Primary responsibilities include clinical service with individuals, families, and groups, assessment/testing, clinical consultation, student

supervision, and administrative duties. In addition, students may participate in program design and development, grant writing, training, or scholarly projects that are intended to improve services within the community agency. Prereq: 4th year medical students in the RPLP Program.

MD 860 CLINICAL DERMATOLOGY I. (4)

Students will spend mornings in the outpatient dermatology clinic and two afternoons per week with inpatient dermatology consultations. Each student will have the opportunity to evaluate and treat patients under the supervision of the attending physician. S/he will be able to observe and assist in minor surgical procedures. Students will attend and participate in didactic interactive sessions once or twice a week, and complete a required on-line dermatology module. Prereq: Successful completion of third year rotations.

ME Mechanical Engineering

ME 101 INTRODUCTION TO MECHANICAL ENGINEERING. (3)

This course introduces the Mechanical Engineering profession including the skills and expectations required for success. Engineering applications of calculus are also presented. Prereq or concur: MA 113.

ME 205 COMPUTER AIDED ENGINEERING GRAPHICS. (3)

Combines freehand sketching techniques, both orthographic and pictorial, and the use of a solid modeling program to describe and define mechanical objects using current industrial standards. An introduction to basic dimensioning and tolerancing techniques is included.

ME 220 ENGINEERING THERMODYNAMICS I. (3)

Fundamental principles of thermodynamics. Prereq: PHY 231. Prereq or concur: MA 214.

ME 251 INTRODUCTION TO MATERIALS AND MANUFACTURING PROCESSES. (3)

A background course in the areas of materials and manufacturing processes for mechanical engineers. Includes basic microstructure of materials, material properties and processing. Also includes an overview of casting, metal forming, machining, additive processing, non-traditional manufacturing processes, and manufacturing of non-metallic components. Prereq: MA 113, CHE 105.

ME 310 ENGINEERING EXPERIMENTATION I. (3)

An introductory course in measurement and instrumentation emphasizing measurement errors, elementary statistics, uncertainty analysis, sensors, time and frequency response of instrumentation components, signal conditioning circuitry, and digital data acquisition. Applications include the measurement of strain, pressure, temperature, flow, force, torque, and vibration. Lecture, two hours; laboratory, three hours. Prereq: ME 101, ME 330, EE 305 and engineering standing. Prereq: ME 330, EE 305 and engineering standing. Prereq or coreq: ME 340.

ME 311 ENGINEERING EXPERIMENTATION II. (3)

A laboratory to instruct the student in the performance of basic mechanical engineering components and systems. Performance of experiments, application of theory and reporting. Introduction to error analysis, and design and planning of experiments. Lecture, one hour; laboratory, four hours. Prereq: ME 310, 321, 325 and engineering standing.

ME 321 ENGINEERING THERMODYNAMICS II. (3)

Gas mixtures, air-water vapor mixtures. Air conditioning system design. Principles and design of energy conversion devices, power and refrigeration cycles. Principles of combustion, chemical equilibrium, one-dimensional gas dynamics. Nozzle design. Continuation of ME 220. Prereq: ME 220, MA 214, and engineering standing.

ME 325 ELEMENTS OF HEAT TRANSFER. (3)

Fundamental principles of conduction, convection, radiation heat transfer. Numerical methods for heat transfer problems. Design and applications of heat transfer equipment such as fins and heat exchangers. Prereq: ME 330, MA 214, and engineering standing.

ME 330 FLUID MECHANICS. (3)

Introduction to the physical properties of fluids, fluid statics. Equations of conservation of mass, momentum and energy for systems and control volumes. Dimensional analysis and similarity. Principles of inviscid and real fluid flows including derivation and application of the Navier-Stokes equations. Flow through pipes and around bodies. Application and design of fluid handling systems. Prereq: Engineering standing, ME 220, and MA 214.

ME 340 INTRODUCTION TO MECHANICAL SYSTEMS. (3)

Modeling of mechanical, thermal, hydraulic and electrical systems, and other phenomena from a systems viewpoint. Analysis of continuous-time models for free and forced response. Laplace transforms and transfer functions. Introduction to numerical simulation. Analysis of higher-order systems. Prereq: MA 214, and engineering standing. Coreq: EM 313.

***ME 344 MECHANICAL DESIGN. (3)**

Fundamentals of design with methods of approximation. Introduction to optimum design considerations. Synthesis and problems on the design of various mechanical elements. Prereq: ME 151 or EM 251, EM 302, engineering standing; concur: EM 313.

ME 358 ECONOMIC ANALYSIS OF MECHANICAL SYSTEMS. (3)

Formulation of economic relationships. Familiarization with alternate mechanical systems and application of economic principles of selection of alternates. Prereq: ME 321, engineering standing or consent of instructor.

ME 380 TOPICS IN MECHANICAL ENGINEERING

(Variable topics) (3)
A lecture-recitation course on a topic of current interest. Modern developments in mechanical engineering will be stressed. Offered as a technical elective in mechanical engineering. May be repeated to a maximum of nine credits. Prereq: Variable, given when topic identified and engineering standing.

ME 395 INDEPENDENT WORK IN MECHANICAL ENGINEERING. (1-3)
Special research and problems for individual students who wish to pursue independent investigations. Variable credit: may be repeated to a maximum of six credit hours for technical electives. A final report is required. Prereq: Consent of department chairperson via permit.

ME 411 ME CAPSTONE DESIGN I. (3)
The first semester of the capstone design sequence in mechanical engineering. Topics important in product design and manufacturing are included, including consideration of economics, safety, and communication. Students will develop a project plan concerned with the design of a complex system of current interest to mechanical engineers. Students will work in small groups and emphasis will be on original work. Lecture, two hours; laboratory/independent team work, three hours per week. Prereq: Engineering standing; prereq: ME 310, ME 325, ME 340, ME 344.

ME 412 ME CAPSTONE DESIGN II. (3)
Second semester of the capstone design sequence in mechanical engineering. Students will complete a project concerned with the design of a complex system of current interest to mechanical engineers. Students will work in small groups and emphasis will be on original work. Topics include engineering ethics, design and communication. Lecture, 1 hour; lab 4 hours per week. Prereq: ME 411 and engineering standing. Course is to be taken semester immediately following ME 411.

ME 440 DESIGN OF CONTROL SYSTEMS. (3)
Fundamentals of classical control theory. Mathematical representation of feedback control systems using block diagrams and transfer functions. Design and analysis of feedback control systems using root-locus, Nyquist, and Bode methods to ensure system stability and meet desired system response specifications. Numerical simulation of feedback control systems. Prereq: ME 310, ME 340 and engineering standing.

ME 480G HEATING, VENTILATING AND AIR-CONDITIONING. (3)
An introductory course emphasizing the engineering systems aspects of thermal environmental design. Principles and applications of building energy requirements and thermal comfort criteria. Prereq: ME 325 and Engineering standing or consent of instructor. (Same as AEN 480G.)

ME 501 MECHANICAL DESIGN WITH FINITE ELEMENT METHODS. (3)
This course emphasizes mechanical design techniques based on the finite element method, using machine design background as the starting point. Techniques for modeling machine elements will be shown in relation to the basic FEM theory. Emphasis will be on quantifying loads, the resulting stress and deflection, and relating them to design allowables, leading to an acceptable design solution. Prereq or concur: Engineering Standing, ME 344 and ME 205; or Graduate standing or consent of instructor. (Same as MFS 501.)

ME 503 LEAN MANUFACTURING PRINCIPLES AND PRACTICES. (3)
This course will introduce students to the fundamental concepts of production improvement utilizing lean manufacturing principles and practices. In addition to the lectures, web-based simulations/experiments/games will be used to help learn the application of the tools supported by industry case studies. A Capstone Simulation will be used to demonstrate the collective application of all the tools and techniques (details included below). An application project is also included where students will work in teams to study a real-life manufacturing or service environment to assess the current state, identify improvement opportunities and develop countermeasures for implementation. Prereq: Engineering standing or with instructor permission. (Same as MFS 503.)

ME 505 MODELING OF MANUFACTURING PROCESSES AND MACHINES. (3)
This course is aimed at providing the undergraduate and graduate students in mechanical and manufacturing engineering basic knowledge and understanding of the major manufacturing processes for modeling, monitoring and control of these processes through a series of analytical and experimental techniques and tools, including group work for assignments and experiments. Prereq: EM 302, EM 313, and engineering standing; or graduate standing with instructor consent. (Same as MFS 505.)

ME 506 MECHANICS OF COMPOSITE MATERIALS. (3)
A study of the structural advantages of composite materials over conventional materials, considering high strength-to-weight and stiffness-to-weight ratios. Fiber reinforced, laminated and particulate materials are analyzed. Response of composite structures to static and dynamic loads, thermal and environmental effects, and failure criteria are studied. Prereq: EM 302, engineering standing or consent of instructor. (Same as EM/MSE 506.)

ME 507 DESIGN FOR MANUFACTURING. (3)
This course will provide a strong foundation in the concepts, theories and applications of design engineering methodologies for effective manufacture of high quality products at low costs and high productivity. In addition to the lectures, the assembly and design analysis of "product based assembly kits" will be used to apply and help learn the tools presented in class. The final project includes the application of these tools to re-design a given product from a manufacturing and assembly perspective. Prereq: ME 344 or instructor permission. (Same as MFS 507.)

ME 510 VIBRO-ACOUSTIC DESIGN IN MECHANICAL SYSTEMS. (3)
Application of basic acoustics and vibrations to engineering problems in vibro-acoustic design. The objective is to acquaint the student with the tools used in industry for noise and vibration control and to make the student aware of the major applications of such tools in the automotive, aerospace, and consumer product industries. Prereq: ME 310, ME 340. This course is open only to graduate students or undergraduates with engineering standing.

ME 512 MANUFACTURING SYSTEMS. (3)
This course introduces students to fundamentals of design, planning and control of manufacturing systems aided by computers. Concepts of control hardware, NC programming languages, software aspects related to NC manufacturing, programmable controllers, performance modeling of automated manufacturing systems, group technology and flexible manufacturing systems, etc. will be addressed. Prereq: Engineering standing. (Same as MFS 512.)

ME 513 MECHANICAL VIBRATIONS. (3)
The analysis of vibrational motion of structural and mechanical systems. Single-degree-of-freedom systems; free vibrations; nonperiodic excitation; harmonic excitation. Modal analysis of multiple-degree-of-freedom systems. Vibration of continuous bodies, including strings and bars (axial, torsional and flexural modes). Energy methods. Prereq: EM 313 and EM 302, engineering standing or consent of instructor. (Same as MFS 513.)

ME 514 COMPUTATIONAL TECHNIQUES IN MECHANICAL SYSTEM ANALYSIS. (3)
Computer-based methods of analyzing mechanical systems are studied. The studies include the numerical solution techniques on which the analyses are based. Linear and nonlinear static and dynamic systems are analyzed. Finite element and other engineering software packages are used. Prereq: ME 340. This course is open only to graduate students or undergraduates with engineering standing.

ME 515 ROTORDYNAMICS OF TURBOMACHINERY. (3)
Review of dynamic characteristics unique to high speed rotating shafts in turbomachinery. Equations of motion for a rotor, including gyroscopic effects; computational methods, including finite element; effects of bearings and nonlinearities, stability; application to design situations in high-speed equipment, including aerospace, energy generation, and other industrial applications. Prereq: EM 313 and Engineering standing; pre/co-requisite for Western Kentucky University students: ME 415 and ME 344; pre/co-requisites for UK students: ME 344 and ME 501; or Graduate Standing or consent of instructor. (Same as MFS 515.)

ME 516 SYSTEMS ENGINEERING. (3)
Systems Engineering is a discipline necessary for cost-effective development of complex multi-disciplinary systems. Optimal design of modern systems for defense, transportation, telecommunications and energy, among other industries, requires a different perspective than the design of subsystems operating within them. This course presents principles and the practice of Systems Engineering, along with its origins in the aerospace and software industries, historical perspective and case studies of current interest. Topics include system life-cycle, requirements definition, modeling, personality, trade studies, design optimization (with minimal information), risk management, proposal writing and others. Guest lecturers and case studies provide a realistic setting for understanding the application of course materials. Prereq: Engineering Standing.

ME 526 LEAN OPERATIONS MANAGEMENT. (3)
This course will cover topics in basic lean system operations as well as the management system to support the attainment of highest customer satisfaction with respect to Safety, Quality, Cost, Productivity, Delivery and Human Resource Development. The instructional method employs discovery learning techniques and consists of in-class presentations with a focus on hands-on activities, and selected outside assignments to teach and demonstrate the development of a lean operations environment and the management system to support it. Working in teams, students apply fundamental lean tools and concepts to develop a lean operations environment capable of driving continuous improvement in a simulated factory. As the operational environment evolves, key management principles and tools are explored using the teachings of Taiichi Ohno and others considered to be the pillars of the Toyota Production System. Prereq: Enrollment restricted to junior-level or above students. (Same as EE/MFS 526.)

ME 527 APPLIED MATHEMATICS IN THE NATURAL SCIENCES I. (3)
Construction, analysis and interpretation of mathematical models applied to problems in the natural sciences. Physical problems whose solutions involve special topics in applied mathematics are formulated, various solution techniques are introduced, and the mathematical results are interpreted. Fourier analysis, dimensional analysis and scaling rules, regular and singular perturbation theory, random processes and diffusion are samples of selected topics studied in the applications. Intended for students in applied mathematics, science and engineering. Prereq: MA 432G or three hours in an equivalent junior/senior level mathematics course, or consent of instructor. This course is open only to graduate students or undergraduates with engineering standing. (Same as MA 527.)

ME 530 GAS DYNAMICS. (3)
Consideration of the mass, energy and force balances applied to compressible fluids. Isentropic flow, diabatic flow, flow with friction, wave phenomena and one-dimensional gas dynamics. Applications to duct flows and to jet and rocket propulsion engines. Prereq: ME 321, ME 330 and Engineering standing.

ME 531 FLUID DYNAMICS I. (3)
Stress at a point (introduced as a tensor of rank two). Equation of conservation of mass, rate of strain tensor, derivation of Navier-Stokes equation, source-sink flows, motion due to a doublet, vortex flow, two- and three-dimensional irrotational flow due to a moving cylinder

with circulation, two-dimensional airfoils. Prereq: ME 330, MA 432G and Engineering standing.

ME 532 ADVANCED STRENGTH OF MATERIALS. (3)

Unsymmetrical bending of beams, thin plates, stress analysis of thick-walled cylinders, and rotating discs. Theory of elastic energy, curved beams, stress concentration, and fatigue. Prereq: EM 302 and engineering standing. (Same as EM 531.)

ME 548 AERODYNAMICS OF TURBOMACHINERY. (3)

Aerodynamic analysis and design of turbomachines (pumps, compressors and turbines). Blade element performance (deflection and losses), and models for performance prediction are present. Special topics - rotating stall and surge, and aeromechanical considerations. Prereq: ME 321 and ME 330. This course is open only to graduate students or undergraduates with engineering standing.

ME 549 POWER GENERATION. (3)

Modern powerplants for electric power generation and cogeneration. Thermodynamic analysis of different concepts of powerplants. Design studies of specific powerplants. Prereq: ME 321 and ME 330. This course is open only to graduate students or undergraduates with engineering standing.

ME 554 CHEMICAL AND PHYSICAL PROCESSING OF POLYMER SYSTEMS. (3)

Theory and practice as related to the chemical and physical processing of polymer systems. Polymer rheology, heat transfer in polymer flows, polymer engineering properties. Polymer processing operations and materials selection; flow instabilities. Prereq: CME 330, CME 425 or ME 325; or consent of instructor. This course is open only to graduate students or undergraduates with engineering standing. (Same as CME/MFS/MSE 554.)

ME 555 INTRODUCTION TO MICRO-/NANO-ELECTROMECHANICAL SYSTEMS. (3)

This course provides an overview of micromachined structures with an emphasis on operational theory and fabrication technology. Prereq: Engineering standing or consent of instructor. (Same as EE/MSE 555.)

ME 556 INTRODUCTION TO COMPOSITE MATERIALS. (3)

Modern composite materials and their applications. Basic concepts and definitions. Fundamental properties of fibers and polymer resins. Manufacturing methods. Analysis and design of laminated and chopped fiber reinforced composites. Micro- and macro-mechanical analysis of elastic constants. Failure theory of composite materials. Computational design of composites. Prereq: Engineering Standing, and EM 302 or with instructor permission. (Same as CME/MFS/MSE 556.)

ME 560 ENGINEERING OPTICS. (3)

Fundamentals of geometrical and physical optics; applications as related to problems in engineering design and research, details of some optical measurement techniques; introduction to lasers; techniques for determining optical properties. Prereq: Engineering standing. (Same as EE 566.)

ME 563 BASIC COMBUSTION PHENOMENA. (3)

Simultaneous application of fluid mechanics, heat and mass transfer, chemical kinetics and thermodynamics to combustion. Topics covered include chemical kinetics, chain and thermal explosions, detonation and deflagration, flammability limits, stirred reactors. Flame stabilization in high and low velocity streams, laminar and turbulent diffusion flames, droplet burning, and metal combustion. Prereq: ME 321, ME 330, ME 325 and engineering standing; or graduate standing.

ME 565 SCALE MODELING IN ENGINEERING. (3)

A study of concepts of scale modeling in engineering applications. The course will include dimensionless numbers, scaling laws, and their application in engineering design and research. Prereq: ME 310, ME 321, ME 325. This course is open only to graduate students or undergraduates with engineering standing.

ME 570 FUNDAMENTALS OF NANO-ELECTRONIC DEVICES AND MATERIALS. (3)

Energy bands in crystals; heterostructures; quantum wells and low dimensional systems; the two-dimensional electron gas and MODFET; transmission in nanostructures; current topics in nanoscale devices. Prereq: ME 310, ME 321, ME 325. This course is open only to graduate students or undergraduates with engineering standing. (Same as EE/MSE 570.)

ME 580 HEATING, VENTILATING AND AIR CONDITIONING. (3)

A course emphasizing the use of thermodynamics, fluid mechanics, and heat transfer principles in thermal environmental design. Building energy requirements will be computed and thermal comfort criteria will be studied. Prereq: BAE 427 or ME 321, or consent of instructor. This course is open only to graduate students or undergraduates with engineering standing. (Same as BAE 580.)

ME 585 FOURIER SERIES AND BOUNDARY VALUE PROBLEMS. (3)

An introductory treatment of Fourier series and its application to the solution of boundary value problems in the partial differential equations of physics and engineering. Orthogonal sets of functions, Fourier series and integrals, solution of boundary value problems, theory and application of Bessel functions and Legendre polynomials. Prereq: MA 432G or equivalent. This course is open only to graduate students or undergraduates with engineering standing. (Same as MA 485G.)

ME 599 TOPICS IN MECHANICAL ENGINEERING (Subtitle required). (3)

A detailed investigation of a topic of current significance in mechanical engineering such as: computer-aided manufacturing, special topics in robotics, and current topics in heat transfer. May be repeated under different subtitles to a maximum of nine credits. A particular topic may be offered at most twice under the ME 599 number. Prereq: Variable; given when topic is identified. This course is open only to graduate students or undergraduates with engineering standing.

PREREQUISITE FOR GRADUATE WORK: Students desiring to take any of the following courses should have a thorough working knowledge of chemistry, physics and mathematics.

ME 602 DYNAMICS OF DISTRIBUTED MECHANICAL SYSTEMS. (3)

Applications of small-oscillation shell theory to continuous mechanical systems modeled by shells, plates, rings, arches, membranes, beams, etc. Study of natural frequencies, modeshapes, forced-vibration characteristics, system dampings, dynamic influence function, combination of subsystems, active and passive vibration controls and dampings. Prereq: ME 540 or EM 513, or consent of instructor.

ME 603 MECHANICS OF PLASTIC SOLIDS I. (3)

Permanent changes in shape of solid materials occur as plastic deformations in many engineering applications, such as extrusion, forging and rolling. This course examines the experimental basis and fundamental theoretical framework for plastic materials. The analysis of plastic deformations in simple bending, torsion, tension and compression, and some two dimensional problems are presented. Connection between mechanics parameters, design variables and metallurgical phenomena are discussed. Limit analysis is studied. Prereq: EM 601/ME 641, or EM/ME 651 or consent of instructor.

ME 605 MODELING, SIMULATION AND CONTROL FOR MANUFACTURING. (3)

The purpose of this course is to examine methods and systems from the perspectives of modeling, simulation, and control of manufacturing facilities. The emphasis will be primarily on techniques that can be used to model and evaluate performance of systems. Students are encouraged to think critically about available technologies, identify relative strengths and weaknesses, and analyze the technologies toward developing improved solutions to factory control and information management problems. Prereq: Graduate Standing. (Same as EE/MFS 605.)

ME 606 GLOBAL ISSUES IN MANUFACTURING. (3)

The need to increase quality, productivity, efficiency and sustainability in manufacturing operations spanning the product, process and systems (manufacturing systems as well as supply chain) domains is essential for companies to be successful. The increased globalization of markets and manufacturing operations, declining natural resources and negative consequences of some manufacturing practices as well as increased legislation in many regions has led to many new challenges that companies must overcome to be successful in competitive markets. This seminar course will introduce students to a variety of global issues in manufacturing through presentations by leading national and international experts in these domains. The seminars will cover a broad range of manufacturing related topics relevant to many disciplines including manufacturing, mechanical and electrical engineering. The course can also help graduate students identify topical issues that need further investigation and could become potential research topics. (Same as EE/MFS 606.)

ME 607 ANALYSIS OF METAL CUTTING PROCESSES. (3)

Advanced study of metal cutting involving the mechanics of metal cutting including cutting forces, tool-wear/tool-life and temperature analysis, surface finish and integrity, chip control, machinability assessments and advances in cutting tool technology. Prereq: ME 505. (Same as MFS/MSE 607.)

ME 610 ENGINEERING ACOUSTICS. (3)

A comprehensive study of wave propagation in fluids; derivation of the scalar wave equation and a study of its elementary solutions for time harmonic and transient waves in one, two and three dimensions. Radiation and scattering of waves at fluid and solid boundaries. Integral equation solution of the scalar velocity wave potential; numerical methods. Prereq or concur: MA 432G.

ME 611 BOUNDARY ELEMENT METHODS IN ENGINEERING. (3)

Introduction of boundary element methods for use in solving common engineering equations, such as the Laplace equation, the Poisson equation, the wave equation, and the diffusion equation. Both the theoretical and numerical aspects of the boundary element technique are presented. Application areas include heat conduction, potential flow problems, acoustic wave propagation, general diffusion, and stress analysis. Prereq: EGR 537 or consent of instructor. (Same as EGR 611.)

ME 613 NONLINEAR OSCILLATIONS. (3)

Many physical systems exhibit some nonlinear behavior. This course presents some methods of analyzing discrete, nonlinear, dynamical systems and applies the methods to typical mechanical systems. Various kinds of nonlinear behavior, including resonance phenomena such as harmonics, parametric excitation, and discontinuous jumps in amplitude are considered. Lyapunov stability criteria and Floquet and Routhian procedures for performing stability analyses of systems are introduced, and their physical interpretations for various systems are studied. Prereq: EM/ME 513.

ME 620 ADVANCED ENGINEERING THERMODYNAMICS I. (3)

Critical treatment of the laws of thermodynamics, relations among thermodynamic properties; stability of systems; thermodynamic processes; selected special topics. Prereq: ME 321.

ME 626 ADVANCED HEAT CONVECTION. (3)

Comprehensive study of heat convection; derivation of equations of convection of mass, momentum, and energy; boundary layer equations; classical solutions of laminar convection problems; turbulent convection; analogies between momentum and energy. Prereq: ME 325, MA 432G or concurrent.

ME 627 RADIATION HEAT TRANSFER. (3)

Principles of thermal radiation, the determination of radiation properties, and the analysis of radiation heat transfer. Results of recent radiation researches are included in the discussions. Prereq: ME 325, MA 432G or concurrent.

ME 628 BOILING AND CONDENSATION. (3)

Phase-change heat transfer including boiling and condensation. Phenomenological treatment of boiling using hydrodynamic instability. Theory of two-phase flow and its application to forced flow boiling. Film and dropwise condensation. Prereq: ME 325.

ME 631 FLUID DYNAMICS II. (3)

A continuation of ME 531 with emphasis on viscous flow. Exact and approximate solutions, boundary layer theory. Jets, wakes, rotating systems, compressible boundary layer and hydrodynamic stability. Prereq: ME 531 or consent of instructor.

ME 634 TURBULENT FLOWS. (3)

Physical and analytical description of turbulent flows, isotropic turbulence, boundary layers and shear flows, free turbulence in jets and wakes. Measurement techniques. Prereq: ME 531; prereq or concur: ME 631.

ME 641 FOUNDATIONS OF SOLID MECHANICS. (3)

A brief review of vectors and an in-depth discussion of tensors and tensor calculus. Stress, deformation and strain. Continuum balance principles of mass, momentum and energy, the equations of motion and the energy equation. Entropy, the principles of material frame indifference and material symmetry. Various constitutive models, including elasticity (linear and/or non-linear), plasticity and viscoelasticity. Thermoelasticity, hyperelasticity, hypoelasticity, and electroelasticity may also be addressed. Prereq: EM 531 or ME 532 or consent of instructor.

ME 644 ADVANCED DYNAMICS I. (3)

Many physical systems in engineering involve rigid bodies in translation and rotation. Such motions are studied in this course by the use of Euler's Laws. The kinematical description of the motions utilize the concept of reference frames. The inertia properties of rigid bodies, and the energy functions for rigid bodies are covered. Analytical and numerical solutions of dynamical systems of engineering interest are considered. Prereq: EM 313; prereq, or concur: MA 432G.

ME 645 ADVANCED CONTROL SYSTEM ANALYSIS. (3)

Conceptual development and study of complex systems; their synthesis and design; analysis and optimization of system parameters. Input-output relationships; formulation of mathematical models, parameters and constraints on physical systems. Prereq: ME 440 or instructor consent.

ME 647 SYSTEM OPTIMIZATION I. (3)

Introduction to linear and nonlinear optimization and their use in engineering design. Emphasis on numerical approaches and use of optimization methods for engineering systems (e.g. biological, mechanical, structural). Prereq: CS 221 or equivalent; one mathematics course beyond MA 214 or equivalent. (Same as BAE 647.)

ME 651 MECHANICS OF ELASTIC SOLIDS I. (3)

Many engineering applications involve the use of materials that behave elastically when performing their designed function. This course concerns the general analysis of small deformations, stress, and stress-deformation relations for elastic bodies. The solution of typical problems frequently encountered in engineering applications, e.g., extension, bending, and torsion of elastic bars, stress concentrations and thermoelastic behavior, are studied. Some modern computational methods currently used in engineering practice are introduced. Prereq: MA 432G or consent of instructor.

ME 652 MECHANICS OF ELASTIC SOLIDS II. (3)

Continuation of EM 651 with more attention to the fundamental structure of and important historical and contemporary contributions to elastic theory. Extensive use of modern computational methods that were introduced in the first course will provide familiarity with the solution of larger scale, industrially important elasticity problems. Application of the boundary integral equation method (BIE) will be emphasized. Some use also will be made of the finite element method, primarily for comparison with BIE. Instruction will include "hands-on" experience with digital-computer program packages. Prereq: EM 651 or consent of instructor.

#ME 672 NONLINEAR SYSTEMS AND CONTROL. (3)

This course presents methods for analyzing and controlling nonlinear dynamic systems. The major topics are: 1) fundamental properties of nonlinear ordinary differential equations such as existence and uniqueness; 2) Lyapunov stability theory; and 3) nonlinear feedback control techniques such as backstepping, feedback linearization, and Lyapunov-based design.

ME 690 ADVANCED ALGORITHMS FOR COMPUTATIONAL FLUID DYNAMICS. (4)

Theory and implementation of main algorithms widely used for solving multi-dimensional partial differential equations arising in engineering applications such as fluid dynamics, heat and mass transfer, semiconductor simulation, etc. Numerical solution of steady and time-

dependent linear partial differential equations on rectangular domains via finite difference techniques. Linearization methods for treatment of nonlinear problems. Numerical grid generation for transforming irregular domains into rectangular computational grids. Prereq: MA 537, or consent of instructor, and competence with a high-level programming language.

ME 691 CFD I - INCOMPRESSIBLE FLOWS. (3)

This course will cover a control-volume CFD approach for the conservation of momentum, heat and mass transfer. The emphasis will be on the discretization of the transport equations in general coordinates and its application in both structured and unstructured grid arrangements. Modern numerical schemes and pressure solution algorithms will also be covered. An introduction of turbulence modeling will be provided. At the end of the lecture, the students not only are able to understand the basics of commercial software but also will be able to write a general coordinate code for fluid flow, heat and mass transfer applications. Prereq: ME 531.

ME 692 CFD II - COMPRESSIBLE FLOWS. (3)

This second course shall focus on the solution of the compressible Navier-Stokes equations. The Van-Leer's and Roe's approaches will be discussed to derive the discretization equations. Modern shock capturing schemes, such as FCT, TVD and ENO will be introduced. The solution techniques such as ADI, DDADI and line-relaxation will be used to solve the system of equations. Multi-grid acceleration techniques will be introduced to speed up the rate of convergence. Finally, the parallelization of CFD codes using shared and distributed computers will be discussed. Prereq: ME 531 and ME 691.

ME 699 TOPICS IN MECHANICAL ENGINEERING (Subtitle required). (3)

A detailed investigation of a topic of current significance in mechanical engineering. May be repeated to a maximum of nine credits under different subtitles. A particular topic may be offered at most twice under the ME 699 number. Prereq: Variable; given when topic is identified.

ME 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

ME 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

ME 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

ME 768 RESIDENCE CREDIT FOR MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

ME 769 RESIDENCE CREDIT FOR DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

ME 780 SPECIAL PROBLEMS IN MECHANICAL ENGINEERING. (3)

This course consists of individual work in one of the various fields of mechanical engineering. May be repeated three times for a maximum of 12 credits. Prereq: Approval of instructor.

ME 790 RESEARCH IN MECHANICAL ENGINEERING. (1-9)

Work may be taken in any field of mechanical engineering, subject to the approval of the director of graduate studies. May be used to satisfy pre-qualifying examination residency credit. May be repeated to a maximum of 18 hours.

ME 799 MECHANICAL ENGINEERING GRADUATE SEMINAR. (0)

A series of talks presented by national and local speakers that will provide graduate students with an overview of current research activities in the broad field of Mechanical Engineering. Prereq: Engineering Graduate student standing or consent of instructor.

MED Internal Medicine

MED 616 BIOLOGY AND THERAPY OF CANCER. (3)

Biology of cancer will be discussed at the molecular, cellular and organismic level. Emphasis will be placed on cellular signaling, apoptosis and cell cycle unique to cancer cells, which affects tumor cell behavior and its interactions with the host immune system. The biology of hematopoietic cells will also be included. Clinicians active in treatment and research of various types of cancer will be invited to participate in the lectures. Prereq: BCH 501, 502, BIO 685. (Same as MI/PHA 616.)

MED 815 FIRST-YEAR ELECTIVE, MEDICINE. (1-3)

With the advice and approval of his or her faculty adviser, the first-year student may choose approved electives offered by the Department of Medicine. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the first-year curriculum. Pass-fail only. Prereq: Admission to first year, College of Medicine.

MED 825 SECOND-YEAR ELECTIVE, MEDICINE. (1-4)

With the advice and approval of his or her faculty adviser, the second-year student may choose approved electives offered by the Department of Medicine. The intent is to provide the student

an opportunity for exploration and study in an area which supplements and/or complements required course work in the second-year curriculum. Pass-fail only. Prereq: Admission to second-year medical curriculum and approval of adviser.

MED 850-899 FOURTH-YEAR ELECTIVE FOR MEDICAL STUDENTS.

(1-6)

With the advice and approval of the faculty adviser and the Student Progress and Promotions Committee, the fourth-year student may choose approved electives offered by the various departments in the College of Medicine. The intent is to provide the student an opportunity to develop his fund of knowledge and clinical competence. Prereq: Admission to the fourth year, College of Medicine and/or permission of the Student Progress and Promotions Committee.

Approved electives:

MED 850 CLINICAL ENDOCRINOLOGY AND METABOLISM, ADULT

MED 851 GASTROINTESTINAL DISEASE, UK AND VAH

MED 852 DERMATOLOGY-SECTION 1

MED 856 NEPHROLOGY, BONE AND MINERAL METABOLISM

MED 857 PULMONARY MEDICINE

MED 858 CARDIOLOGY-UK

MED 860 INFECTIOUS DISEASES

MED 862 CARDIOLOGY-VAH

MED 863 RESEARCH IN MEDICINE

MED 865 SLEEP MEDICINE

MED 867 PATIENT SAFETY AND SYSTEMS ANALYSIS

MED 870 ACTING INTERNSHIP IN MEDICINE

MED 871 ACTING INTERNSHIP IN CRITICAL CARE MEDICINE

MED 872 ACTING INTERNSHIP IN MED-PEDS

MED 873 MEDICAL SPECIALTIES AND GENERAL MEDICINE CLINICS

MED 874 STUDENT HEALTH SERVICE

MED 875 MEDS-PEDS AMBULATORY ELECTIVE

MED 876 HEMATOLOGY-ONCOLOGY, UK

MED 879 GENERAL MEDICAL CONSULTING SERVICE

MED 890 INTERNAL MEDICINE OFF-SITE

MFS Manufacturing Systems Engineering

MFS 501 MECHANICAL DESIGN WITH FINITE ELEMENT METHODS.

(3)

This course emphasizes mechanical design techniques based on the finite element method, using machine design background as the starting point. Techniques for modeling machine elements will be shown in relation to the basic FEM theory. Emphasis will be on quantifying loads, the resulting stress and deflection, and relating them to design allowables, leading to an acceptable design solution. Prereq or concur: Engineering Standing, ME 344 and ME 205; or Graduate standing or consent of instructor. (Same as ME 501.)

MFS 503 LEAN MANUFACTURING PRINCIPLES AND PRACTICES.

(3)

This course will introduce students to the fundamental concepts of production improvement utilizing lean manufacturing principles and practices. In addition to the lectures, web-based simulations/experiments/games will be used to help learn the application of the tools supported by industry case studies. A Capstone Simulation will be used to demonstrate the collective application of all the tools and techniques (details included below). An application project is also included where students will work in teams to study a real-life manufacturing or service environment to assess the current state, identify improvement opportunities and develop countermeasures for implementation. Prereq: Engineering standing or with instructor permission. (Same as ME 503.)

MFS 505 MODELING OF MANUFACTURING PROCESSES AND MACHINES.

(3)

This course is aimed at providing the undergraduate and graduate students in mechanical and manufacturing engineering basic knowledge and understanding of the major manufacturing processes for modeling, monitoring and control of these processes through a series of analytical and experimental techniques and tools, including group work for assignments and experiments. Prereq: EM 302, EM 313, and engineering standing; or graduate standing with instructor consent. (Same as ME 505.)

MFS 507 DESIGN FOR MANUFACTURING.

(3)

This course will provide a strong foundation in the concepts, theories and applications of design engineering methodologies for effective manufacture of high quality products at low costs and high productivity. In addition to the lectures, the assembly and design analysis of "product based assembly kits" will be used to apply and help learn the tools presented in class. The final project includes the application of these tools to re-design a given product from a manufacturing and assembly perspective. Prereq: ME 344 or instructor permission. (Same as ME 507.)

MFS 509 LEADERSHIP FOR A LEAN ENTERPRISE.

(3)

Perhaps the most difficult part of a so-called "lean" transformation is to establish an appropriate culture which is greatly influenced by actions of leadership. The goal of leadership is to foster the creation of a culture which allows team member engagement and drives continuous improvement focused on creating the highest value for the customer. This is accomplished by developing a 'True Lean' operational environment in which the group by themselves uses systematic problem solving to improve the work they do to help meet the

organizations' targets and goals without the need for direct management involvement. The challenge is to understand how this can be accomplished. This is a distance learning course designed to provide an introduction to important leadership thinking and activities required to create and sustain a lean culture within an organization as practiced by Toyota. The primary content for this course comes from the internationally recognized University of Kentucky Lean System Program's public Lean Executive Leadership Institute and Lean Certification courses. In addition to weekly presentations by experienced Toyota executives and others, there will be weekly activities/discussions designed to explore each topic in more depth. Topics will include: understanding the True Lean destination and core thinking, management led problem solving, understanding the path to True Lean, and developing a vision and strategy to achieve it. Other important topics discussed include the pillars of a lean business philosophy, the people side of lean, lean system operations management structure and measurement systems that support and sustain an ongoing lean transformation. Prereq: Student Lean Certification, or MFS 503 (Lean Principles and Practices), or MFS 526 (Lean Operations Management), or consent of instructor.

MFS 512 MANUFACTURING SYSTEMS.

(3)

This course introduces students to fundamentals of design, planning and control of manufacturing systems aided by computers. Concepts of control hardware, NC programming languages, software aspects related to NC manufacturing, programmable controllers, performance modeling of automated manufacturing systems, group technology and flexible manufacturing systems, etc. will be addressed. Prereq: Engineering standing. (Same as ME 512.)

MFS 513 MECHANICAL VIBRATIONS.

(3)

The analysis of vibrational motion of structural and mechanical systems. Single-degree-of-freedom systems; free vibrations; nonperiodic excitation; harmonic excitation. Modal analysis of multiple-degree-of-freedom systems. Vibration of continuous bodies, including strings and bars (axial, torsional and flexural modes). Energy methods. Prereq: EM 313 and EM 302, engineering standing or consent of instructor. (Same as ME 513.)

MFS 515 ROTORDYNAMICS OF TURBOMACHINERY.

(3)

Review of dynamic characteristics unique to high speed rotating shafts in turbomachinery. Equations of motion for a rotor, including gyroscopic effects; computational methods, including finite element; effects of bearings and nonlinearities, stability; application to design situations in high-speed equipment, including aerospace, energy generation, and other industrial applications. Prereq: EM 313 and Engineering standing; pre/co-requisite for Western Kentucky University students: ME 415 and ME 344; pre/co-requisites for UK students: ME 344 and ME 501; or Graduate Standing or consent of instructor. (Same as ME 515.)

#MFS 523 CONCEPTS, ASSESSMENT TOOLS AND METHODS IN SUSTAINABLE POWER AND ENERGY.

(3)

A multidisciplinary course presenting an overview of key topics in sustainability and environmental impact assessment for engineers. Topics will include assessment of current and future energy systems, renewable and conventional energy technologies, supply chain management, sustainability metrics, energy assessment tools, environmental impact assessment and life cycle assessment. Topics will be presented and their attributes described within a framework that aids in evaluation and analysis of energy technology systems and designs in the context of political, social, economic, and environmental goals. Prereq: Engineering Standing and Senior Classification or Consent of Instructor. (Same as CME/EGR 523.)

MFS 525 ORGANIZATIONAL LEARNING FOR LEAN MANUFACTURING.

(3)

Learning organizations are skilled at creating, acquiring, and transferring knowledge, and at modifying their behavior to reflect the new knowledge and insights. In this context, this course will discuss leadership styles, adult learning principles, communication, organizational behaviors, and a structure for learning. Prereq: MFS 503 or consent of instructor.

MFS 526 LEAN OPERATIONS MANAGEMENT.

(3)

This course will cover topics in basic lean system operations as well as the management system to support the attainment of highest customer satisfaction with respect to Safety, Quality, Cost, Productivity, Delivery and Human Resource Development. The instructional method employs discovery learning techniques and consists of in-class presentations with a focus on hands-on activities, and selected outside assignments to teach and demonstrate the development of a lean operations environment and the management system to support it. Working in teams, students apply fundamental lean tools and concepts to develop a lean operations environment capable of driving continuous improvement in a simulated factory. As the operational environment evolves, key management principles and tools are explored using the teachings of Taiichi Ohno and others considered to be the pillars of the Toyota Production System. Prereq: Enrollment restricted to junior-level or above students. (Same as EE/ME 526.)

MFS 554 CHEMICAL AND PHYSICAL PROCESSING OF POLYMER SYSTEMS.

(3)

Theory and practice as related to the chemical and physical processing of polymer systems. Polymer rheology, heat transfer in polymer flows, polymer engineering properties. Polymer processing operations and materials selection; flow instabilities. Prereq: CME 330, CME 425 or ME 325; or consent of instructor. This course is open only to graduate students or undergraduates with engineering standing. (Same as CME/ME/MSE 554.)

MFS 556 INTRODUCTION TO COMPOSITE MATERIALS.

(3)

Modern composite materials and their applications. Basic concepts and definitions. Fundamental properties of fibers and polymer resins. Manufacturing methods. Analysis and design of laminated and chopped fiber reinforced composites. Micro- and macro-mechanical analysis of elastic constants. Failure theory of composite materials. Computational design of compos-

Course Descriptions

ites. Prereq: Engineering Standing, and EM 302 or with instructor permission. (Same as CME/ME/MSE 556.)

MFS 599 TOPICS IN MANUFACTURING SYSTEMS ENGINEERING (Subtitle required). (3)

A detailed investigation of a topic of current significance in manufacturing systems engineering such as: computer-aided manufacturing, special topics in robotics, and lean/agile manufacturing. May be repeated under different subtitles to a maximum of six credits. A particular topic may be offered at most twice under the MFS 599 number. Prereq: Variable; given when topic is identified.

MFS 603 MANAGEMENT FOR A LEAN SYSTEM. (3)

This course provides the MFS student an opportunity to develop skills in managing a lean system at the 'shop floor' level.

MFS 605 MODELING, SIMULATION AND CONTROL FOR MANUFACTURING. (3)

The purpose of this course is to examine methods and systems from the perspectives of modeling, simulation, and control of manufacturing facilities. The emphasis will be primarily on techniques that can be used to model and evaluate performance of systems. Students are encouraged to think critically about available technologies, identify relative strengths and weaknesses, and analyze the technologies toward developing improved solutions to factory control and information management problems. Prereq: Graduate Standing. (Same as EE/ME 605.)

MFS 606 GLOBAL ISSUES IN MANUFACTURING. (3)

The need to increase quality, productivity, efficiency and sustainability in manufacturing operations spanning the product, process and systems (manufacturing systems as well as supply chain) domains is essential for companies to be successful. The increased globalization of markets and manufacturing operations, declining natural resources and negative consequences of some manufacturing practices as well as increased legislation in many regions has led to many new challenges that companies must overcome to be successful in competitive markets. This seminar course will introduce students to a variety of global issues in manufacturing through presentations by leading national and international experts in these domains. The seminars will cover a broad range of manufacturing related topics relevant to many disciplines including manufacturing, mechanical and electrical engineering. The course can also help graduate students identify topical issues that need further investigation and could become potential research topics. (Same as EE/ME 606.)

MFS 607 ANALYSIS OF METAL CUTTING PROCESSES. (3)

Advanced study of metal cutting involving the mechanics of metal cutting including cutting forces, tool-wear/tool-life and temperature analysis, surface finish and integrity, chip control, machinability assessments and advances in cutting tool technology. Prereq: ME 505. (Same as ME/MSE 607.)

MFS 611 MANAGING EFFECTIVE ORGANIZATIONS. (3)

A critical examination of behavior and performance within organizations and between organizations. Special attention is paid to the problem of performance at the individual, group, and formal organizational level. (Same as MGT 611.)

MFS 612 DESIGN OF LEAN MANUFACTURING SYSTEMS. (3)

Technical design of manufacturing systems in accordance with lean manufacturing principles. Topics include models for characterization and analysis of factory flow dynamics, production flow analysis, work cell design, and design of pull-based production control systems. Prereq: MFS 503 Lean Manufacturing Principles and Practices.

MFS 613 SUSTAINABILITY, ETHICS, AND LEADERSHIP IN MANUFACTURING ORGANIZATIONS. (3)

This course is intended to provide future manufacturing managers and leaders a basic understanding of important theories and practices necessary to successfully manage and lead teams to achieve manufacturing organizational objectives. The course is organized into several modules. The first module will focus on developing an understanding and capability to approach ethical and sustainability concerns confronted by manufacturing organizations. This will include coverage of tools to help identify and address societal and environmental obligations of manufacturing organizations and issues confronting them that span multiple cultures and nations. Because people are one of the most important resources in any organization, the second and third modules will address organizational behavior (OB) and individual effectiveness. OB theories and practices that can be used to increase the capability to observe, understand and manage people's behavior will be covered. The last module considers safety and ergonomics as they relate to manufacturing organizations. Coverage will include tools and techniques that can be used to analyze the manufacturing workplaces and ensure its ergonomic design as well as an overview of the current state of occupational safety and health regulations. Prereq: Graduate standing.

MFS 681 SUSTAINABLE QUALITY SYSTEMS DESIGN. (3)

This course provides the theory and principles of sustainable quality production systems as originally developed by Shewhart and Deming. The course will focus on statistical methods from the viewpoint of quality control: at the product specification level; at the product production level; and at the judgment of quality at the inspection level. Prereq: Basic statistics.

MFS 699 TOPICS IN MANUFACTURING SYSTEMS ENGINEERING (Subtitle required). (1-3)

A detailed investigation of a topic of current significance in manufacturing systems engineering such as: computer-aided manufacturing, special topics in robotics, and lean/agile manufactur-

ing. May be repeated under different subtitles to a maximum of six credits. A particular topic may be offered at most twice under the MFS 699 number. Prereq: Variable; given when topic is identified.

MFS 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

MFS 768 RESIDENCE CREDIT FOR MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

MFS 780 SPECIAL PROBLEMS IN MANUFACTURING SYSTEMS ENGINEERING. (3)

Course consists of specialized individual work in manufacturing systems engineering. Laboratory, nine hours. May be repeated to a maximum of nine credits. Prereq: Approval of instructor.

MFS 784 RESEARCH PROJECT IN MANUFACTURING SYSTEMS ENGINEERING. (3)

Individual study related to a special research project supervised by the student's advisor. A final written report on the project is required. This course is open only to and required by students pursuing the M.S. in MFS degree with a non-thesis option (Plan B). The course cannot satisfy part of the required thirty hours of course work for Plan B. Prereq: Approval of student's advisor.

MGT Management

MGT 292 INTRODUCTION TO ENTREPRENEURSHIP. (3)

This course provides a broad overview of the art and science of entrepreneurship and venture creation. The essential elements of the entrepreneurial process will be covered including: business planning, business model analysis, entrepreneurial marketing, entrepreneurial finance, legal issues (e.g. managing intellectual property, legal forms of organization), new venture alliances and deals, and social entrepreneurship.

***MGT 301 BUSINESS MANAGEMENT. (3)**

A study of planning, organizing and controlling; an interdisciplinary approach; actual decision-making cases. Prereq: Sophomore standing.

MGT 309 INTRODUCTION TO INTERNATIONAL BUSINESS. (3)

The course focuses on the management of international businesses, investigating the effects of differences in national requirements, and cultural expectations on management. Prereq: MGT 301.

MGT 320 SURVEY OF HUMAN RESOURCE MANAGEMENT. (3)

Survey of the field of Human Resource Management. Includes an introduction to the topics of labor law, workforce planning, recruitment, selection, training, performance management, compensation, and labor relations. Prereq: MGT 301.

MGT 340 ETHICAL AND REGULATORY ENVIRONMENT. (3)

This course focuses on ethical principles, the nature of the capitalist-collectivist continuum, government influence on business, and the responsibility of business to society. Topics to be considered include major approaches to ethical reasoning, antitrust law, social regulation, and the economic and social theories that undergird the concept of the social responsibility of business. Prereq: Junior standing or consent of instructor.

MGT 341 BUSINESS LAW I. (3)

An introduction to the United States legal system and its application to the business community. Topics to be considered include: contracts, agency, commercial paper, and real property. Prereq: Junior standing or consent of instructor.

MGT 390 SPECIAL TOPICS IN MANAGEMENT (Subtitle required). (3)

Readings, projects, lecture and/or discussion to illuminate current topics of special interest or concern in management. May be repeated to a maximum of six credits. May not be repeated under the same title. A particular topic may be offered at most three times under the MGT 390 number. Prereq: Consent of instructor.

MGT 395 INDEPENDENT STUDY IN MANAGEMENT. (1-6)

Course designed to accommodate students' independent exploration of specific topics within management. Course must be under the supervision of an instructor. May be repeated to a maximum of six credits. Prereq: GPA of 3.0, upper division status, approval of instructor and chairperson.

MGT 410 ANALYSIS OF ORGANIZATIONAL BEHAVIOR. (3)

This course draws on a variety of pedagogical sources – ranging from social psychological theories to in-depth case analyses and organizational simulations – to help students better manage the human and interpersonal challenges they confront in the contemporary workplace. Prereq: MGT 301.

MGT 430 SERVICES MARKETING MANAGEMENT. (3)

This course addresses marketing and management issues and problems faced by service organizations. Marketing and management concepts are broadened and applied to the service organizations. Topics related to service quality, the marketing mix, and service delivery are covered. Prereq: MKT 300, MGT 301. (Same as MKT 430.)

MGT 450 NEGOTIATIONS AND CONFLICT RESOLUTION. (3)

This course focuses on developing your negotiating skills and making you a more confident negotiator. Topics covered include: diagnosing negotiation situations, strategizing and planning upcoming negotiations, learning your preferred negotiating style, dealing with difficult negotiation partners, buying cars and houses, negotiating job offers, dealing with agents, multi-issue negotiations, multi-party negotiations, ethical considerations in negotiation, and global negotiations. The course emphasizes in-class role playing as a learning tool; thus, class attendance is mandatory. Prereq: MGT 301.

MGT 491 SMALL BUSINESS MANAGEMENT. (3)

An examination of the problems and decisions inherent in the establishment, financing, and management of small business firms. Prereq: MKT 300, MGT 301, MGT 340 and FIN 300.

MGT 492 ENTREPRENEURSHIP AND VENTURE CREATION. (3)

This course examines the key issues that are associated with the discovery and development of entrepreneurial opportunities as it applies to venture creation. Some emphasis is placed on the role of the entrepreneur in society as it pertains to increasing economic and social welfare for others. Students will develop an understanding of entrepreneurship as it relates to the people, opportunity, context and deal aspects of the new venture creation process. Prereq: Senior standing and MKT 300, MGT 301, MGT 340 or MGT 341 and FIN 300.

MGT 499 STRATEGIC MANAGEMENT. (3)

This course focuses on the unique challenges of managing the full range of business functions and processes in single-business and diversified companies. It actively involves students in the exploration of current strategic management concepts, frameworks, and techniques commonly used by top-level managers to gain competitive advantage over rival companies. Prereq: MKT 300, MGT 301, MGT 340, FIN 300 and senior standing.

MGT 608 COMPARATIVE INTERNATIONAL MANAGEMENT. (3)

A comparison of management concepts and practices in different countries and the role of management in economic development; an interdisciplinary approach emphasizing the impact of sociological-cultural factors, legal-political factors and education on management development. Prereq: MGT 301 or consent of instructor.

MGT 610 GLOBAL MANAGEMENT. (3)

This course examines the problems of managing a business enterprise which spans international boundaries. Students will develop an understanding of the political, social, economic, and technological factors driving globalization and will consider the impact of these forces on competition, markets, industry structure, and organization.

MGT 611 MANAGING EFFECTIVE ORGANIZATIONS. (3)

A critical examination of behavior and performance within organizations and between organizations. Special attention is paid to the problem of performance at the individual, group, and formal organizational level. (Same as MFS 611.)

MGT 612 NEGOTIATION AND CONFLICT RESOLUTION. (3)

An action learning course devoted to developing the project management and business process analysis skills necessary to diagnose and solve real-world business problems.

MGT 624 ENTREPRENEURSHIP AND BUSINESS START UPS. (3)

This course is a broad overview of the art and science of entrepreneurship, venture creation and business start-ups. It covers the essential elements of the entrepreneurial process including entrepreneurial marketing, business planning, business model analysis, legal issues, new venture financing, new venture alliances and deals, and social entrepreneurship.

MGT 641 LEGAL ISSUES IN THE ACCOUNTING PROFESSION. (3)

A study of various legal issues in the accounting profession. Among the topics covered are accountant's liability, commercial transactions, business organizations, property concepts and other issues in the legal environment that will be encountered in accounting practice. Prereq: Admission to MSACC program or consent of DGS.

MGT 690 STRATEGIC THINKING AND ANALYSIS. (3)

This course trains students in the art and science of formulating an integrated perspective and approach toward the general management of an entire enterprise; teaches fundamental tools and methods for balancing the competing demands and often conflicting priorities facing strategic managers; will address economic, cultural, operational, financial, organization, technological, political, interpersonal, and other issues impacting the overall performance of firms.

MGT 695 INDIVIDUAL WORK IN MANAGEMENT. (1-6)

Students confer individually with the instructor. May be repeated to a maximum of six credits. Prereq: Consent of the instructor.

MGT 697 LEADERSHIP, COMMUNICATIONS AND ETHICS. (3)

Political, historical, and philosophical perspectives on the meaning and processes of top management leadership. Applications of leadership perspective to the development of organizational culture, ethics and values, stakeholder relations, business-government relations, and competitiveness.

MGT 699 BUSINESS POLICY AND STRATEGY II. (3)

Strategic issues associated with multi-industry, multi-national, multi-business and start-up management; strategy implementation and institutionalization; planning systems. Prereq: MGT 698 or the equivalent.

MGT 712 ORGANIZATIONS AND INDIVIDUAL BEHAVIOR. (3)

Examination of current theory and empirical research regarding the behavior of individuals within organizations. Topics are divided into three phases: major behavioral processes, applied models of individual choice behavior, and specific areas of individual choice and decision.

MGT 713 SEMINAR IN ADVANCED ORGANIZATION THEORY. (3)

Seminar will examine broad range of organization theory and research from a multiple paradigm perspective. Interpretive and critique views and research literature will be among those examined. Prereq: Graduate status or consent of instructor.

MGT 714 SEMINAR IN MANAGEMENT THEORY AND POLICY. (3)

A broad range of literature on organization strategy and structure is examined. Conceptual frameworks and research relating to the Business Policy decision processes are reviewed and critiqued. Prereq: Permission of instructor.

MGT 763 RESEARCH, DESIGN AND ANALYSIS. (3)

This course deals with the design and analysis of business research. Emphasizes the practical application of analysis of variance and correlational techniques to problems in business research. Focus will be on design, implementation, and interpretation of research. Prereq: MGT/MKT/FIN 762. (Same as MKT 763.)

MGT 780 ADVANCED SOCIAL NETWORK ANALYSIS. (3)

The focus of this course is on the theoretical concepts and methodology of social network analysis, both from a research and applied perspective. The course involves in-depth training in the hands on analysis of social networking data using specialized social network analysis software. Prereq: Consent of instructor.

MGT 781 INDEPENDENT WORK IN MANAGEMENT. (1-6)

Designed for advanced students who undertake research problems to be conducted in regular consultation with the instructor. May be repeated to a total of six credit hours. Prereq: Consent of instructor.

MGT 790 DOCTORAL COLLOQUIUM. (1-2)

The doctoral colloquium is intended to be a professional socialization course for the Ph.D. students in Management. The course features a mix of topics related to the Management Ph.D. program, including research, teaching and service, major transitions in the program, preparation for the professoriate, as well as special research topics such as philosophy of science and guest research lectures.

MGT 795 SPECIAL TOPICS IN MANAGEMENT (Subtitle Required). (3)

Analysis of a specialized topic in management. May be repeated to a maximum of 12 credits when taken under different subtitles. Prereq: Consent of instructor.

MI Microbiology and Immunology

MI 494G IMMUNOBIOLOGY. (3)

A survey of theories and mechanisms of immunity, including: nature of antigens and antibodies, antigen-antibody reactions, immunocompetent cells, immunogenetics, allergic reactions, tumor immunology and transplantation immunology. Prereq: BCH 401G (may be taken concurrently) and BIO 208 or BIO 308 or consent of instructor. (Same as BIO 494G.)

MI 495G BACTERIAL PATHOGENESIS. (3)

This course will examine the pathogenic mechanisms used by bacteria to cause human disease. Bacterial virulence factors and host susceptibility factors will be discussed, with an emphasis on understanding the techniques that can be used to identify these traits in newly emerging pathogens. Prereq: BIO 308, BIO 315, BCH 401 recommended. Or permission of instructor. (Same as BIO 495G.)

MI 582 VIROLOGY. (3)

Physical, chemical and biological properties of viruses. Modes of replication and control of gene product formation displayed by representative plant, animal, and bacterial viruses. Prereq: BIO 304 and biochemistry or equivalent strongly recommended, or consent of instructor. (Same as BIO 582.)

MI 595 IMMUNOBIOLOGY LABORATORY. (2)

Laboratory in immunology and serology. Preparation, standardization, and uses of biological products; serology. Laboratory; four hours. Prereq: BIO/MI 494G or concurrently; or consent of instructor. (Same as BIO 595.)

MI 598 CLINICAL MICROBIOLOGY. (3)

An introduction to the concepts of clinical microbiology through a survey of the microbial diseases of man using an organ system approach. Prereq: BIO 208 and 209, BIO 476G recommended, CHE 230 or 236, or consent of instructor. (Same as PAT 598.)

MI 601 SPECIAL TOPICS IN MOLECULAR AND CELLULAR GENETICS. (1)

Each semester five distinguished scientists visit the UK campus to deliver a series of three formal lectures each and participate in numerous informal contacts with graduate students. The emphasis is on the presentation of the most current advances (often unpublished) in selected topics in molecular and cellular genetics. May be repeated to a maximum of six credits. (Same as BCH/BIO/PLS/PPA 601.)

- MI 615 MOLECULAR BIOLOGY.** (3)
This course will develop the student's ability to critically read and evaluate the primary literature in selected areas of molecular biology; various experimental systems and techniques are discussed. While there is some lecture, the time will be predominately spent in class discussions of the primary literature. Prereq: An advanced course in molecular biology and genetics (e.g. IBS 602) or consent of instructor. (Same as BCH/BIO 615.)
- MI 616 BIOLOGY AND THERAPY OF CANCER.** (3)
Biology of cancer will be discussed at the molecular, cellular and organismic level. Emphasis will be placed on cellular signaling, apoptosis and cell cycle unique to cancer cells, which affects tumor cell behavior and its interactions with the host immune system. The biology of hematopoietic cells will also be included. Clinicians active in treatment and research of various types of cancer will be invited to participate in the lectures. Prereq: BCH 502, 502, BIO 685. (Same as MED/PHA 616.)
- MI 685 IMMUNOBIOLOGY, INFECTION AND INFLAMMATION.** (3)
An introductory level graduate course surveying current trends in immunology including the organization of the immune system, cells important for immunity and inflammation; types of immune responses, cellular immunology, molecular immunology, self-nonself discrimination, vaccines and immune mediated diseases. Prereq: BCH 401G, or BCH 501 or 502, IBS 501 or equivalent or consent of the course director. (Same as BIO 685.)
- MI 707 CONTEMPORARY TOPICS IN IMMUNOLOGY.** (3)
This course will deal with controversial and evolving areas of immunology. Lectures in a given topic will be accompanied by student discussion of contemporary literature. Prereq: MI 685 or equivalent or consent of instructor. (Same as BIO 707.)
- MI 710 SPECIAL TOPICS IN MICROBIOLOGY.** (2)
A variety of topics relating to modern molecular and cell biology. Prereq: Consent of instructor.
- MI 720 MICROBIAL STRUCTURE AND FUNCTION.** (3)
Molecular basis of structure and function in unicellular microbes. Molecular genetic and structural approaches to the analysis of bacterial architecture growth, division, and differentiation. Prereq: (to reflect appropriate IBS course). (Same as BIO 720 and OBI 720).
- #MI 725 MECHANISMS OF MICROBIAL PATHOGENESIS.** (3)
Mechanisms of Microbial Pathogenesis is designed to cover major pathogenic mechanisms of bacteria, protozoa, fungi and viruses. Since it is impossible to include every possible pathogen, we instead focus on selected pathogens that illustrate particular lifestyles and pathogenic strategies. Emphasis is given to covering host mechanisms that combat the different weapons and lifestyles of the disease causing microbes. Students will gain an understanding of the interplay between pathogen and host and appreciate the myriad ways in which microbes have learned to subvert host pathways and evade the immune system. The course starts with an introduction to pathogenic concepts and immune responses, and then proceeds to the selected pathogens, including *Listeria*, *Chlamydia*, *Mycobacterium*, *Toxoplasma*, *Ebola*, *Influenza*, and *HIV*. The course is a mixture of lecture and discussion. Students will read current literature, assigned by their instructors, and participate in classroom discussions of the papers. Prereq: MI 720 or MI 495G.
- MI 748 MASTER'S THESIS RESEARCH.** (0)
Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.
- MI 749 DISSERTATION RESEARCH.** (0)
Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams. (Same as MB 749.)
- MI 767 DISSERTATION RESIDENCY CREDIT.** (2)
Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.
- MI 768 RESIDENCE CREDIT FOR MASTER'S DEGREE.** (1-6)
May be repeated to a maximum of 12 hours. (Same as MB 768.)
- MI 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE.** (1-12)
May be repeated indefinitely. (Same as MB 769.)
- MI 772 SEMINAR IN MICROBIOLOGY.** (0-1)
Review of current literature in microbiology; presentation of papers on work in progress in the department or on assigned topics; reports on meetings of national and international scientific and professional societies and symposia. Required of all graduate students. Two hours per week. May be repeated nine times for a maximum of 10 credits. (Same as BIO 772.)
- MI 798 RESEARCH IN MICROBIOLOGY.** (1-9)
May be repeated to a maximum of 24 credits. Prereq: Consent of instructor. (Same as BIO 798.)
- MI 815 FIRST-YEAR ELECTIVE, MEDICAL MICROBIOLOGY AND IMMUNOLOGY.** (1-3)
With the advice and approval of his or her faculty adviser, the first-year student may choose approved electives offered by the Department of Medical Microbiology and Immunology. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the first-year curriculum. Pass-fail only. Prereq: Admission to first year, College of Medicine.

- MI 816 CELLULAR STRUCTURE AND FUNCTION/GENETICS.** (4)
The course combines small group meetings, lecture, clinical correlations, problem-based learning, and problem-solving sessions in providing an understanding of the relationship of human genetics to human health and disease. Close integration with biochemistry topics provides a better picture of how biochemistry, genetics and molecular biology contribute to normal human development and medicine. Lecture, 20 hours per week. Prereq: Admission to Medical School (first year).
- MI 822 IMMUNITY, INFECTION, AND DISEASE.** (9)
The course provides basic concepts of immunology and of bacterial, viral, fungal and protozoal biology. It focuses on mechanisms of human immunity, immunologically mediated disease, and pathogenesis in infectious disease. The material covered includes relevant pathology associated with both immunologic and infectious diseases, and a brief summary of infectious diseases from an organ system perspective. Lecture, 20 hours per week. Prereq: Admission to second year of medical curriculum.
- MI 825 SECOND-YEAR ELECTIVE, MEDICAL MICROBIOLOGY AND IMMUNOLOGY.** (1-4)
With the advice and approval of his or her faculty adviser, the second-year student may choose approved electives offered by the Department of Medical Microbiology and Immunology. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the second-year curriculum. Pass-fail only. Prereq: Admission to second-year medical curriculum and approval of adviser.
- MI 850-899 FOURTH-YEAR ELECTIVE FOR MEDICAL STUDENTS.** (1-6)
With the advice and approval of the faculty adviser and the Student Progress and Promotions Committee, the fourth-year student may choose approved electives offered by the various departments in the College of Medicine. The intent is to provide the student an opportunity to develop his fund of knowledge and clinical competence. Prereq: Admission to the fourth year, College of Medicine and/or permission of the Student Progress and Promotions Committee.

MKT Marketing

- MKT 300 MARKETING MANAGEMENT.** (3)
The literature and problems in the retail distribution of consumers' goods, wholesale distribution of consumers' goods, industrial goods, sales organizations, sales promotion and advertising, and price policies. Prereq: ECO 202 or consent of instructor.
- MKT 303 SUPPLY CHAIN MANAGEMENT.** (3)
The study of supply chain management involves the management of key business processes, the flow of goods and information, and relationships with fellow members of the supply chain. This course will introduce students to the terminology, concepts, and skills related to supply chain management. Students will develop an understanding of the complexities associated with the physical movement of goods and information, and how they affect the mission of the firm. Discussions will address the various processes and activities within an organization and how they interface with other members of the supply chain. Prereq: Completion of all college pre-major requirements and admission to Upper Division in Business and Economics. Non B&E Upper Division undergraduate students may be enrolled with the consent of the instructor. (Same as AN 303.)
- MKT 306 ANALYTICS: MODELS AND METHODS.** (3)
Analytical activities are rapidly expanding in businesses, government and not-for-profit organizations. For the modern enterprise, problems in practically every domain are being formulated as models, which are then used to analyze data – producing explanations and predictions to help solve these problems. Using potentially vast volumes of data, these models are implemented and solved via computers – generating solutions that must then be interpreted and appropriately applied in decisional processes. This course leads students through the steps of model formulation, solution, interpretation, and application in such crucial decision domains as investment, scheduling, production, inventory, and logistics. It furnishes hand-on experiences with such widely used modeling techniques as linear programming, network flow programming, and multiple-objective decision modeling. Prereq: Completion of all college pre-major requirements and admission to Upper Division in Business and Economics. Non-B&E Upper Division undergraduate students may be enrolled with the consent of the instructor. (Same as AN 306.)
- MKT 310 CONSUMER BEHAVIOR.** (3)
The application of psychology, sociology, and anthropology to marketing. Includes such topics as consumer decision process, communications, interpersonal behavior, innovation. Prereq: MKT 300.
- MKT 320 RETAIL AND DISTRIBUTION MANAGEMENT.** (3)
Analysis of the functions, structure, policies, and performance of distribution channels and institutions. The course objective is to provide students with an understanding of concepts and decision making tools useful in managing manufacturer-retailer relationships and distribution costs at both the channel and retail level. The course is also concerned with the legal and socio-economic impact of distribution trends and practices. Prereq: MKT 300.
- MKT 324 DATA BASE MANAGEMENT.** (3)
Databases are the backbone of information systems. Almost every modern organization uses database technology to support its routine operations such as inventory management, customer relationship management, human resources management, and electronic commerce.

Database technology is also the foundation of data-driven decision-making that has permeated the business world. With the proliferation of data-driven decision-making and end-user computing, understanding database technologies is necessary for business students to remain competent in the modern business environment. Prereq: Completion of all college pre-major requirements and admission to Upper Division in Business and Economics. Non-B&E Upper Division undergraduate students may be enrolled with the consent of the instructor. (Same as AN 324.)

MKT 330 PROMOTION MANAGEMENT. (3)

The objectives of the Promotion Management course are to develop awareness and understanding of the role and functions of promotion within firms and within society and to explicitly attempt to develop student thinking skills, i.e., problem identification, problem analysis, and problem solving, in the area of promotion. Prereq: MKT 300 and MKT 310 or permission of instructor.

MKT 340 INTRODUCTORY MARKETING RESEARCH. (3)

Managerial applications of research in marketing decision making. The course objective is to provide students with expertise in defining information needs, selecting information sources and organizing information in decision-making contexts. Application of major concepts will be illustrated in marketing policy areas. Prereq: MKT 300, ECO 391.

MKT 390 SPECIAL TOPICS IN MARKETING (Subtitle required). (1-3)

Readings, projects, lecture and/or discussion to illuminate current topics of special interest or concern in marketing. May be repeated to a maximum of six credits. May not be repeated under the same title. A particular topic may be offered at most twice under the MKT 390 number. Prereq: Consent of instructor.

MKT 395 INDIVIDUAL WORK IN MARKETING. (1-6)

Student develops a specific program with instructor. One or more papers is typically expected. May be repeated to a maximum of six credits. Prereq: GPA of 3.0 in major, approval of instructor and chairperson.

MKT 403 PRODUCTION AND INVENTORY SYSTEMS. (3)

This course is an advanced introduction to the complexities of managing production and inventory systems. An enterprise's success in today's highly-competitive, often-global business environment, depends on effectively managing its production activities and the related inventories at various production-process stages. Because such decisions are invariably tied to demand forecasts, the course begins with an examination of forecasting. Students are then led through the topics of production planning, master scheduling, material-requirements & manufacturing-resources planning, production activity control, capacity management, and sequencing & scheduling. The course culminates with coverage of contemporary trends toward just-in-time manufacturing systems and lean manufacturing systems. Applications of analogous systems and principles in the service sector are also addressed throughout the course. Prereq: Completion of all college pre-major requirements and admission to Upper Division or graduate student status in Business and Economics. Non-B&E Upper Division undergraduate students and graduate students may be enrolled with the consent of the instructor. (Same as AN 403G.)

MKT 406 PRODUCTIVITY AND QUALITY MANAGEMENT. (3)

This course is an advanced treatment of two related concepts that are vital to the success of an enterprise: quality and productivity. As a key ingredient of competitive strategy, quality encompasses many attributes of a product or service – such as its design, its features, fit and finish, durability, safety, and customer treatment. In highly competitive settings, a firm that achieves and sustains high quality levels for its goods and/or services, while remaining at least as efficient as competitors in processes used to produce these outputs, tends to outperform its competitors. Beginning with an examination of connections between quality and productivity, this course examines their underlying philosophic, strategic, and human issues. The coverage includes emergent practices for continuous improvement including Kaizen, Six Sigma, customer relationship management, and strategic planning. Prereq: Completion of all college pre-major requirements and admission to Upper Division or Graduate Student status in Business and Economics. Non-B&E Upper Division undergraduate students and graduate students may be enrolled with the consent of the instructor. (Same as AN 406G.)

MKT 410 PERSONAL SELLING. (3)

A detailed exposure to personal selling techniques. Emphasis placed on sales process, especially planning and delivery of sales presentations. Selected sales management topics include recruiting, training, motivating and evaluating sales people, as well as ethical and legal issues. Prereq: MKT 300 and marketing majors only.

MKT 420 DATA MINING. (3)

Data mining is concerned with tools and techniques to help a data/business analyst numerically and visually explore vast data sets, classify data, predict outcomes, or identify associations, patterns, and exceptional events. In practical terms, such capabilities allow firms to better segment markets, evaluate and classify stocks, identify prospective customers, foretell contingencies and catastrophes, identify defaulters and fraudulent transactions, measure churn, identify threats, perform service requests, bundle goods and services, recognize how events (e.g., purchases) are likely to unfold over time, and so on. Such capabilities often make the difference between survival and demise in today's increasingly global, increasingly competitive, and increasingly volatile business settings. Prereq: Completion of all college pre-major requirements and admission to Upper Division or graduate student status in Business and Economics. Non-B&E Upper Division undergraduate students and graduate students may be enrolled with the consent of the instructor. (Same as AN 420G.)

MKT 430 SERVICES MARKETING MANAGEMENT. (3)

This course addresses marketing and management issues and problems faced by service organizations. Marketing and management concepts are broadened and applied to the service organizations. Topics related to service quality, the marketing mix, and service delivery are covered. Prereq: MKT 300, MGT 301. (Same as MGT 430.)

MKT 435 INTERNATIONAL MARKETING. (3)

The primary objectives of this course are to: 1) familiarize the student with selected strategic marketing issues in a multinational environment, 2) examine alternative ways by which a firm can expand internationally, and 3) help the student develop a systematic approach for dealing with global and international marketing issues. Prereq: MKT 300.

MKT 440 TOPICS IN ANALYTICS. (3)

This course covers contemporary topics in enterprise data, analysis, and decision making. Past coverage has included Data Mining, Data Communications, and Valuation of Information. The topics covered would also be valuable to students from programs such as Computer Science, Telecommunications, Statistics and Engineering. Prereq: Completion of all college pre-major requirements and admission to Upper Division or Graduate Student status in Business and Economics. Non-B&E Upper Division undergraduate students and graduate students may be enrolled with the consent of the instructor. (Same as AN 440G.)

MKT 445 SPORTS MARKETING. (3)

The purpose of the course is to develop an understanding of strategic marketing concepts and activities as they apply to the context of sports. Marketing concepts and activities related to the marketing mix, consumer/fan behavior, and business organization-sport organization relationships will be examined. Prereq: MKT 300 and Marketing majors only.

MKT 450 MARKETING STRATEGY AND PLANNING. (3)

As the capstone course for marketing majors, this class examines analytical processes for managerial marketing decisions. Topics will include such problem areas as product planning, distribution systems, advertising strategies, information systems, pricing decisions and buying behavior. Prereq: MKT 300, MKT 310, MKT 340 and one other marketing elective.

***MKT 600 MARKETING MANAGEMENT. (3)**

This course is designed to provide students with an understanding of: the role of marketing function in an organization; the types of marketing decisions and analytical procedures involved in making each decision; the overall marketing planning process; and, the impact of the social, economic, and legal environment on marketing decisions. Prereq: Membership in the MBA program or consent from the department.

***MKT 601 MARKETING RESEARCH. (3)**

MKT 601 entails a vigorous examination of research methodology applicable to marketing situations. Emphasis is placed on 1) experimental design, 2) survey design and administration, and 3) analytical procedures. Practical application of marketing research is stressed. Legal and social issues are also examined. Prereq: Membership in the MBA program or approval by the department.

MKT 611 NEW PRODUCT DEVELOPMENT. (3)

An examination of how firms manage the new product development or service process. Topics covered include ideation, screening; design and prototyping; product portfolio management, new product launch and product acceptance. Prereq: DIS 651; ECO 610; MKT 600.

MKT 622 SALES MANAGEMENT. (3)

MKT 622 entails a comprehensive examination of the planning, implementing, and control of personal contact programs designed to achieve the sales objectives of the firm. Managerial decision-making is emphasized through the application of lecture material, readings, and case studies. Prereq: Completion of first year of MBA program or permission of instructor.

MKT 623 MARKETING IN SERVICE AND NONPROFIT ORGANIZATIONS. (3)

The purpose of the course is to broaden and apply the conceptual system of marketing to the marketing problems of service and nonprofit organizations. Concepts such as marketing mix, marketing segmentation, market positioning, channels of distribution and others will be applied to the problems of service and nonprofit organizations. Prereq: MKT 600 or permission of the instructor.

MKT 624 INTERNATIONAL MARKETING MANAGEMENT. (3)

Examines the broad implications for marketing strategy and decision making of the firm in an international context. Addresses comprehensive survey of firm entry strategies, marketing mix decisions, product policies, and environmental factors in a global context. Context-based problems such as implicit barriers to entry through distribution channel management will also be addressed. Prereq: MKT 600 or permission of instructor.

MKT 695 INDIVIDUAL WORK IN MARKETING. (1-6)

Students confer individually with the instructor. May be repeated to a maximum of six credits. Prereq: Consent of instructor.

MKT 700 SEMINAR IN MARKETING MANAGEMENT. (3)

A doctoral seminar directed toward the basic decision areas of marketing management. Emphasis is on traditional, classic, and contemporary literature that presents important conceptualizations of marketing practices and empirical research in marketing management. Prereq: Consent of instructor.

MKT 710 SEMINAR IN CONSUMER BEHAVIOR. (3)
The seminar is specifically designed for the needs of doctoral students in marketing in that it emphasizes empirical research, theory and methodology as they relate to consumer behavior. The objectives of the seminar are (1) to familiarize the students with the literature of consumer behavior, (2) to stimulate critical thinking about existing research, and (3) to evaluate existing theories, conceptualizations, and models of buyer behavior. Prereq: Consent of instructor.

MKT 720 SEMINAR IN MARKETING THEORY. (3)
A survey, analysis and evaluation of the current research in marketing theory. Detailed attention is given to problems of determining the meaning and boundaries of marketing theory. Emphasis is placed on introducing the student to the substantive content of marketing theories and their methodologies. Prereq: MKT 600 or consent of instructor.

MKT 763 RESEARCH, DESIGN AND ANALYSIS. (3)
This course deals with the design and analysis of business research. Emphasizes the practical application of analysis of variance and correlational techniques to problems in business research. Focus will be on design, implementation, and interpretation of research. Prereq: MGT/MKT/FIN 762. (Same as MGT 763.)

MKT 771 SEMINAR IN BUSINESS ADMINISTRATION. (3)
Each semester some topic currently discussed in scholarly journals in business administration will be studied intensively. May be repeated to a maximum of nine credits. Prereq: Consent of instructor.

MKT 781 INDEPENDENT WORK IN MARKETING. (1-6)
Designed for advanced students who undertake research problems to be conducted in regular consultation with the instructor. May be repeated to a maximum of six credits. Prereq: Consent of instructor.

MLS Medical Laboratory Science

MLS 120 MEDICAL LABORATORY SCIENCE AS A CAREER. (1)
Medical Laboratory Science encompasses multiple major and minor discipline areas thus offering various career opportunities. In this course, we will explore these discipline areas and career opportunities as well as discuss the changing roles of laboratory practitioners.

MLS 400 LABORATORY TECHNIQUES AND PHLEBOTOMY. (2)
Students will be introduced to basic clinical laboratory principles and techniques and provided an opportunity to learn and practice the skills necessary for obtaining a blood specimen by venipuncture and dermal puncture. This course includes a mandatory clinical phlebotomy training opportunity that provides the student with experience collecting venous blood specimens for laboratory testing. Prereq: Admission into the Medical Laboratory Science Program or consent of instructor.

MLS 410 MEDICAL LABORATORY BIOCHEMISTRY. (3)
This course provides the student with an understanding of biochemical systems in the body. During this course, the student will be able to describe how these systems work, the interaction between the systems and understand the consequences that occur when there is a disruption of a system. At the completion of this course, the journey through these metabolic pathways will provide a relevant and informative experience. Prereq: Admission into the Medical Laboratory Science Program or consent of instructor.

MLS 420 CLINICAL IMMUNOLOGY AND SEROLOGY. (3)
This course is designed to provide students with a comprehensive study of the immune system including principles of immunological and serological procedures, immunological disorders and diseases, and significance of laboratory methods used for diagnosis. Prereq: Admission into the Medical Laboratory Science Program or consent of instructor.

***MLS 430 CLINICAL MYCOLOGY AND PARASITOLOGY. (2)**
The study of clinically significant fungi and parasites. Included are the morphological characteristics, pathogenicity, epidemiological characteristics, laboratory testing and treatment. Prereq: Admission into the Medical Laboratory Science Program or consent of instructor.

MLS 440 MOLECULAR TECHNIQUES. (3)
This course focuses on the newest medical laboratory discipline known as molecular diagnostics. The content will include principles of molecular diagnostics, principles and procedures of molecular techniques, and the application of these techniques that aid in identification and diagnosis of conditions and disease states. Prereq: Admission into the Medical Laboratory Science Program or consent of instructor.

MLS 450 MLS EDUCATION AND MANAGEMENT. (3)
This course will focus on concepts of laboratory organization, principles of laboratory management, and fundamental instructional skills necessary for the entry-level medical laboratory scientist. Additional course topics include leadership, career planning, and professionalism. Prereq: Admission into the Medical Laboratory Science Program or consent of instructor.

MLS 460 CLINICAL HEMATOLOGY. (3)
This course is a study of the formed elements of the blood including the practice of routine and specialized test procedures. Anemias, leukemias and non-malignant disorders are discussed and emphasis is placed on the correlation of hematology test results with these diseases and disorders. Prereq: Admission to the Medical Laboratory Science Program or consent of instructor.

MLS 461 CLINICAL MICROBIOLOGY. (3)
The study of medically significant microbiology, including normal flora and pathogens. Lectures also cover microbial physiology, interactions between host and pathogenic microorganisms, and the clinical and epidemiological consequences of these interactions. Clinical bacteriology knowledge will be applied through case studies. Prereq: Admission to the Medical Laboratory Science Program or consent of instructor.

MLS 462 CLINICAL CHEMISTRY. (3)
This course focuses on the study of the theory and practice of routine and specialized clinical chemistry laboratory testing. This will include discussion of quality assurance issues and instrumentation principles, problem-solving scenarios, and an emphasis on accuracy and confidentiality of patient laboratory findings. Prereq: Admission into the Medical Laboratory Science Program or consent of instructor.

MLS 463 IMMUNOHEMATOLOGY. (3)
This course consists of the primary principles and practices of blood banking which include blood group systems, antibody detection and identification, compatibility testing, quality control requirements, instrumentation, blood transfusion, donor selection, and component preparation. In addition, the course will focus on advanced immunohematology topics including transfusion therapy, apheresis and component therapy, hemolytic diseases, histocompatibility (HLA), testing, and federal regulation of blood banking. Prereq: Admission to the Medical Laboratory Science Program or consent of instructor. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

MLS 464 BODY FLUIDS AND HEMOSTASIS. (2)
This course is a combination of three minor medical laboratory disciplines including Urinalysis, Body Fluid Analysis, and Hemostasis. Urinalysis will include a comprehensive study of the urinary system, principles and methods of testing urine, and urinary disorders or diseases. Body Fluid Analysis will include a study of the various fluids analyzed in the laboratory, principles and methods of testing these fluids, and any associated diseases. Hemostasis is the study of blood coagulation and will include the study of this process, principles and methods of testing, and hemostatic disorders and diseases. Prereq: Admission into the Medical Laboratory Science Program or consent of instructor.

MLS 465 CLINICAL HEMATOLOGY LABORATORY. (2)
Laboratory experiences will provide students with the practice of clinical hematology testing. Experiences will include testing with manual and automated procedures, instrumentation principles, role of quality assurance, and the promotion of problem-solving skills. Special emphasis will be placed on the relationship of clinical hematology test results and associated disease states. Prereq: Enrollment in or successful completion of MLS 460.

MLS 466 CLINICAL MICROBIOLOGY LABORATORY. (2)
Basic techniques will be practiced in the student laboratory and conventional microscopic, cultural and immunologic techniques used for the isolation and identification of microorganisms, that are pathogenic to humans, will be reviewed. Prereq: Enrollment in or successful completion of MLS 461.

MLS 467 CLINICAL CHEMISTRY LABORATORY. (2)
This laboratory course includes various basic laboratories associated with the study of clinical chemistry theory and problem-solving. Laboratories will include the study of assays for routine clinical chemistry testing as well as more specialized testing. Students will perform these assays under simulated conditions and will abide by best laboratory practices. Safety and quality control of all procedures will be expected from students. Prereq: Enrollment in or successful completion of MLS 462.

MLS 468 IMMUNOHEMATOLOGY LABORATORY. (2)
Clinical laboratory practice in blood banking procedures and testing. Laboratories will include blood group system identification, antibody detection and identification, compatibility testing; quality control testing, and an introduction to immunohematology (blood bank) instrumentation. Prereq: Enrollment in or successful completion of MLS 463.

MLS 469 BODY FLUIDS AND HEMOSTASIS LABORATORY. (2)
Laboratory experiences will provide students with the practice of urinalysis and other body fluid analysis, and hemostasis testing. Experiences will include testing with manual and automated procedures, instrumentation principles, role of quality assurance, and the promotion of problem-solving skills. Special emphasis will be placed on the relationship of test results and associated disease states. Prereq: Enrollment in or successful completion of MLS 464.

MLS 470 CLINICAL CORRELATIONS. (3)
This course is designed to review primary concepts taught in the major medical laboratory science disciplines. Reviews will be conducted by utilization of clinical and multi-disciplinary case studies, certifying mock examinations, comprehensive writing activity, and additional review assignments. Prereq: Admission into the Medical Laboratory Science Program or consent of instructor. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

#MLS 471 PROFESSIONALISM IN MEDICAL LABORATORY SCIENCE. (1)
Medical Laboratory Science is an allied health profession and as such, this course is designed to address professionalism topics specific to Medical Laboratory Scientists. The course focuses on healthcare diversity, work place challenges, and career success. Prereq: Admission into the Medical Laboratory Science Program or consent of instructor.

MLS 475 ADVANCED TOPICS IN MEDICAL LABORATORY SCIENCE (INDEPENDENT STUDY). (1-3)

Independent study for undergraduate students with an interest in a specific problem, topic, or issue in Medical Laboratory Science. Prereq: Admission into the Medical Laboratory Science Program and consent of instructor.

MLS 476 VARIABLE TOPICS IN MEDICAL LABORATORY SCIENCE. (1-3)

In-depth study of a current problem or issue related to the medical laboratory science profession. Prereq: Admission into the Medical Laboratory Science Program or consent of instructor.

MLS 480 CLINICAL HEMATOLOGY PRACTICUM. (1-4)

This course consists of a supervised practicum in which students will integrate practice and theory of clinical hematology in a health care setting and expose them to the scope of work, variety of tests, and automation found within the hematology department. Laboratory, 35-40 hours per week. The number of credits will depend on the student's prior experience. Prereq: Successful completion of MLS 460 and MLS 465.

MLS 481 CLINICAL MICROBIOLOGY PRACTICUM. (1-4)

This course consists of a supervised practicum in which students will integrate practice and theory of clinical microbiology in a health care setting and expose them to the scope of work, variety of tests, and automation found within the microbiology department. Laboratory, 35-40 hours per week. The number of credits will depend on the student's prior experience. Prereq: Successful completion of MLS 461 and MLS 466.

MLS 482 CLINICAL CHEMISTRY PRACTICUM. (1-4)

This course consists of a supervised practicum in which students will integrate practice and theory of clinical chemistry in a health care setting and expose them to the scope of work, variety of tests, and automation found within the hematology department. Laboratory, 35-40 hours per week. The number of credits will depend on the student's prior experience. Prereq: Successful completion of MLS 462 and MLS 467.

MLS 483 IMMUNOHEMATOLOGY PRACTICUM. (1-4)

This course consists of a supervised practicum in which students will integrate practice and theory of immunohematology (blood bank) in a health care setting and expose them to the scope of work, variety of tests, and automation found within the immunohematology department. Laboratory, 35-40 hours per week. The number of credits will depend on the student's prior experience. Prereq: Successful completion of MLS 463 and MLS 468.

MLS 485 SPECIAL TOPICS PRACTICUM. (1-3)

This course offers students an opportunity to observe and learn in an area of clinical laboratory sciences not found in the routine laboratory. Laboratory, 35-40 hours per week. Prereq: Consent of MLS Program Director.

MNG Mining Engineering**MNG 101 INTRODUCTION TO MINING ENGINEERING. (1)**

Orientation to the mining engineering profession; introduction to key mining engineering activities and functions; mining methods and equipment; health and safety subsystems.

MNG 191 MINE GRAPHICS. (1)

This course is designed to provide students an understanding of CAD core functionality and features so that they can create, edit, and organize their engineering drawings. It covers essential CAD commands and functions, including coordinate systems, drawing tools, layer management, dimensioning, undoing and altering, moving and duplicating, arrays, blocks, viewports, file maintenance, measurement and calculations, plotting and printing. The course emphasizes hands-on experience with CAD software and practical applications in mining and processing applications.

MNG 201 MINING ENGINEERING FUNDAMENTALS. (3)

Introduction to the fundamentals of mining engineering and the profession. Prospecting and exploration concepts introduced including ore reserve estimation techniques. Underground and surface mining methods will be studied with emphasis to applications to given deposit types and spatial constraints. General mine plan, sequence of development and cycle of operations for each method evaluated along with required auxiliary operations and equipment.

MNG 211 MINE SURVEYING. (2)

Surveying as applied to mining engineering, including the use and care of surveying instruments, measurement of horizontal and vertical distances, angles and direction, collection of ground and underground data for the design and layout of surface and underground mineral workings; and some aspects of the precise determination of position and direction for survey control. Prereq: MNG 101 or EGR 101 and MA 113 or consent of instructor.

MNG 264 MINING METHODS. (3)

A study of the principal underground and surface mining methods practiced in coal and hard rock mines; method classification; support and equipment requirements; general mine planning; sequence of development, cycle of operations, and method application and variation. Prereq: MNG 101 or EGR 101 or consent of instructor.

MNG 291 ELEMENTS OF MINE DESIGN. (3)

Practical knowledge of computational tools used in mine design projects for both underground and surface mining, including a programming language and geology/mining modeling software.

Geological and mining engineering modeling through the manipulation of software packages commonly used by mining engineers. Projects will cover the areas of surveying, geology, economics and mining. Prereq: MNG 191, MNG 201, or consent of instructor.

MNG 301 MINERALS PROCESSING. (3)

Principles and practices of mineral processing with emphasis on state-of-the-art separation technologies. Mineral deposits, sampling theory, slurry calculation, and particle motion in fluid streams. Unit operations for processing particulate materials. Crushing and grinding, screening, gravity separation, magnetic and electrostatic separation, froth flotation, dewatering and clarification. Flowsheets, process selection and plant performance evaluation. Prereq: CHE 105, MA 114, PHY 231, engineering standing.

MNG 302 MINERALS PROCESSING LABORATORY. (1)

Application of the principles studied in MNG 301. Laboratory, two hours. Prereq or concur: MNG 301.

MNG 303 DEFORMABLE SOLIDS LABORATORY. (1)

Experimental studies of the mechanical properties of materials and structural elements. Laboratory, four hours per week for three-fourths of the semester. Prereq or concur: EM 302.

MNG 311 ELECTRICAL CIRCUITS AND MINING MACHINERY. (3)

A study of dc and ac electrical circuits, single-phase and three-phase circuits, transformers, and ac and dc rotating machinery used in the mining industry. Prereq: MA 114, PHY 232.

MNG 322 MINE SAFETY AND HEALTH MANAGEMENT AND PROCESSES. (2)

History and overview of mine health and safety; effective health and safety management systems; building a health and safety culture; hazard anticipation and identification, risk management and hazard control; Federal processes for health and safety system management; mine safety and health resources; mine laws, including safety regulations and interpretations for mining engineers and supervisors; and contemporary issues in mine safety. Prereq: MNG 101 or EGR 101; concur: MNG 264.

MNG 331 EXPLOSIVES AND BLASTING. (2)

Drilling and drill performance, types and properties of commercial explosives, initiation and priming, explosives selection, blast design, explosives applications, environmental effects, and safety and regulatory compliance. Prereq: MNG 264 or consent of instructor.

MNG 332 MINE PLANT MACHINERY. (3)

Theory and practice of mine haulage, hoisting, and drainage and pumping. Application of engineering principles to the analysis and selection of materials handling mediums for the minerals industry. Prereq: MNG 264, PHY 231; concur: EM 221 and ME 330 or CME 330.

MNG 335 INTRODUCTION TO MINE SYSTEMS ANALYSIS. (3)

An introduction to probability, statistics, and statistical inferential reasoning. Probability distributions for discrete and continuous random variables; descriptive statistics and claims arising from them; construction and evaluation of claims arising from formal statistical inference conveyed in confidence intervals and hypothesis tests; analysis of variance; information literacy for statistical inferential reasoning. The course emphasizes mining applications. Prereq: MA 113, or equivalent quantitative foundations course, and MNG 201, or consent of instructor.

MNG 341 MINE VENTILATION. (3)

Hazards of dust and gaseous contamination of mine atmosphere, air dilution requirements, flow distribution in mine network, computer analysis of the ventilation network, natural ventilation and fans. Lecture, two hours; laboratory, three hours. Prereq: Engineering standing and prerequisite or concurrent ME 330.

MNG 351 UNDERGROUND MINE DESIGN. (3)

Principles of underground excavations designs related to metallic, coal and industrial mineral deposits including underground mine layouts, stability of the underground excavations, material handling and drainage control. Underground mine planning and scheduling, equipment selection, and cost estimation. Prereq: MNG 211, MNG 291, MNG 331, Engineering Standing; or consent of instructor.

MNG 371 PROFESSIONAL DEVELOPMENT OF MINING ENGINEERS. (3)

Development of professional skills important to the practice of mining engineering. Topics include written and oral communication skills, understanding ethical responsibility and appropriate ethical conduct, real world problem formulation and solution skills, exercise of abilities important to lifelong learning, knowledge of contemporary issues important to mining engineering. Prereq: Engineering standing. WRD 110/CIS 110 and WRD 111/CIS 111 or WRD 112 or CIS 112. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

MNG 395 INDEPENDENT WORK IN MINING ENGINEERING. (1-6)

Individual work on some selected problem in the field of mining engineering. May be repeated for a maximum of six credits. Prereq: Consent of department chairperson and the instructor, engineering standing.

MNG 431 MINING ENGINEERING ECONOMICS. (2)

Engineering economics including discounted cash flow, opportunity cost of capital, cost (incremental, sunk, etc.), net present value and rate of return, and uncertainty; topics in mineral economics. Prereq: Engineering standing.

MNG 435 MINE SYSTEMS ENGINEERING AND ECONOMICS. (4)

Optimization of mining systems and investment decisions based on the time value of money and the application of deterministic and stochastic models. Application of advanced features in spread-sheet programming for solving mine systems problems. Prereq: MNG 335 and Engineering Standing.

MNG 463 SURFACE MINE DESIGN. (3)

Principles of surface excavations designs related to quarries and mines; including orebody description, pit layouts and excess spoil disposal areas, stability of the slopes, material handling and surface drainage control. Surface mine planning and scheduling, equipment selection, cost estimating, optimization. Prereq: MNG 211, MNG 291, MNG 331, Engineering Standing.

MNG 511 MINE POWER SYSTEM DESIGN. (3)

A study of mine power distribution systems, major power system components, and techniques of power system analysis. Topics include per-unit analysis; symmetrical component analysis; grounding, including ground-bed design, ground-resistor sizing, and ground wire monitoring; cable and transformer sizing; and load-flow analysis. Course may not be used to satisfy degree requirements in electrical engineering if credit is earned in EE 538. Prereq: EE 305 or equivalent and engineering standing.

MNG 531 ADVANCED BLAST DESIGN AND TECHNOLOGY. (3)

Advanced theory and application of explosives in excavation; detailed underground blast design; specialized blasting including blast casting, construction and pre-splitting. Bulk systems for blasting, electronic detonators, and introduction to demolition blasting. Introduction to blasting research. Examination of field applications. Prereq: MNG 331, engineering standing.

MNG 535 ENVIRONMENTAL CONTROL SYSTEM DESIGN AND RECLAMATION. (3)

Introduction to the principles of sustainable mine planning with a focus on environmental control system design, reclamation and restoration design, and environmental monitoring systems. Topics will include culvert and diversion design, hydrologic inputs, catchment delineation and routing, sedimentologic inputs, erosion control and best management practice selection, sediment pond design, design of silt fences, grass filters, and sediment ditches, weep berm and vegetated filter strip design, reforestation, grassland/wildlife establishment, stream restoration, wetlands/vernal ponds, environmental monitoring system design, and community integration. Prereq: MNG 291, MNG 463, and engineering standing or consent of instructor. (Same as BAE 535.)

MNG 541 COMPUTER DESIGN OF MINE VENTILATION SYSTEMS. (3)

Computer methods applied to the design and analysis of mine ventilation networks; flow distribution, location and size of regulators and fans; evaluation of existing ventilation systems and application of correction methods to improve effectiveness of ventilation system. Prereq: MNG 341 with a C or higher.

MNG 551 ROCK MECHANICS. (4)

Determination of the physical properties of rocks, rock mass classification, stress around mine openings, strain and displacement of the rock mass, rock reinforcement and support, stress interaction and subsidence, strata control. Lecture, three hours; laboratory, three hours per week. Prereq: EM 302, MNG 303, GLY 220, and engineering standing.

MNG 552 GROUND CONTROL SOFTWARE AND ANALYSIS. (3)

Evaluation and design of ground control plans for various mining conditions through the use of several computer programs with an emphasis placed on sedimentary tabular deposits. Variables including pillar stress, pillar strength, convergence, and others are investigated. Prereq: MNG 551 – Rock Mechanics or consent of instructor.

MNG 561 MINE CONSTRUCTION ENGINEERING I. (3)

Development of underground capital openings (shafts, chambers, tunnels, and drifts) in mines. Design and construction under normal conditions. Organization and management of construction operations. Prereq: MNG 551.

MNG 575 COAL PREPARATION DESIGN. (3)

Design a coal preparation plant by integrating unit operations preceded by certain back-up laboratory experiments. Cost sensitivity analysis of competing design schemes will be determined on a selected coal. Lecture: two hours; laboratory: three hours per week. Prereq: MNG 301 or equivalent, engineering standing.

MNG 580 MINERAL PROCESSING PLANT DESIGN. (3)

Design of mineral processing plants including the associated unit operations; flowsheet development, unit selection, sizing and number, water/mass flow balancing. Prereq: MNG 301, 302; engineering standing.

MNG 591 MINE DESIGN PROJECT I. (1)

First course of a two-part capstone design project. Emphasis is on ore reserve evaluation, development of a preliminary mine plan, design of auxiliary processes, teamwork, and oral and written communication. Minable reserves will be quantified and quality distribution assessed. An appropriate mining technique will be identified and implemented into a proposed mine design. Laboratory, three hours per week. Prereq: MNG 211, MNG 291, MNG 463, MNG 351, and engineering standing.

MNG 592 MINE DESIGN PROJECT II. (3)

Students will undertake a major design project such as the overall design of a mining system, including design of major components of the system and economic evaluation. Students will write reports documenting this design, which will also be presented orally before a group of peers and invited experts. Prereq: MNG 332, MNG 341, MNG 551, MNG 591, and engineering standing.

MNG 599 TOPIC IN MINING ENGINEERING. (2-3)

A detailed investigation of a topic of current significance in mining engineering. May be repeated to a maximum of six credits, but only three credits can be earned under the same title. A particular topic may be offered at most twice under the MNG 599 number. Prereq: Engineering standing and consent of instructor.

MNG 611 MINE POWER SYSTEM PROTECTION. (3)

A study of components and methods for providing protection to mine electrical systems. Review topics include power distribution arrangements, per-unit system, and symmetrical components. Course topics include sources of transients and faults, protective equipment, phase Overcurrent relaying, and ground fault protection. Prereq: MNG 511.

MNG 621 INSTRUMENTATION FOR BLASTING AND BLAST MITIGATION. (3)

In depth coverage of instrumentation utilized for commercial/mine blast analysis as well as instrumentation used in blast mitigation testing. The course includes hands on operation of advanced instrumentation systems in a laboratory setting. Prereq: MNG 331 or MNG 531.

MNG 641 ADVANCED MINE VENTILATION. (3)

Planning, designing and redesigning the ventilation systems using computers; data acquisition (ventilation survey); non-steady state flow in mine openings; influence of the ventilation conditions upon the dynamics of the methane concentration; automation of the ventilation system. Lecture, two hours; laboratory, two hours. Prereq: MNG 341.

MNG 690 ADVANCED MINERAL BENEFICIATION ENGINEERING. (3)

State of the art techniques in mineral beneficiation and their application in coal and mineral preparation industry. Prereq: MNG 301 and MNG 572.

MNG 691 SIMULATION OF MINERAL PROCESSING CIRCUITS. (3)

Flowsheet modeling and analysis for coal preparation and ore dressing plants. Topics include unit models for comminution, gravity separation, and froth flotation; relevant techniques for solving systems of nonlinear equations; convergence acceleration techniques; sequential modular, simultaneous modular, and equation-solving flowsheeting frameworks; flowgraph techniques for analysis of certain classes of mineral processing circuits. Prereq: MNG 575.

MNG 699 TOPICS IN MINING ENGINEERING (Subtitle required). (3)

A detailed investigation of a topic of current interest in mining engineering. May be repeated to a maximum of six credits, but only three credits may be earned under the same subtitle. A particular topic may be offered only twice under the MNG 699 number. Prereq: Consent of instructor.

MNG 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

MNG 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

MNG 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

MNG 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

MNG 769 RESIDENCE CREDIT FOR DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

MNG 771 SEMINAR IN MINING ENGINEERING. (1)

Review of current research in specific areas of mining engineering. Required of all graduate students. Prereq: Graduate classification.

MNG 780 SPECIAL PROBLEMS IN MINING ENGINEERING. (1-6)

Individual work on some selected design problems in one area of mining engineering. May be repeated to a maximum of six credits. Prereq: Approval of the chairperson of the department.

MNG 790 SPECIAL RESEARCH PROBLEMS IN MINING ENGINEERING. (1-9)

Individual work on some selected problems in one of the various fields of mining engineering. Laboratory and field measurements, six hours. May be repeated to a maximum of nine credits. Prereq: Approval of the Director of Graduate Studies.

MSE Materials Science and Engineering

MSE 101 MATERIALS ENGINEERING. (1)
An introduction to the materials engineering profession. Professional growth, conduct, ethics and organizations. Introduction to the techniques of materials engineering.

MSE 201 MATERIALS SCIENCE. (3)
Microscopic and macroscopic structure as related to the properties of materials with engineering applications. Prereq or concur: MA 114 and freshman chemistry.

MSE 202 MATERIALS SCIENCE LABORATORY. (1)
To teach students the basic materials characterization laboratory techniques and demonstrate the difference in properties between different types of materials. Prereq: Concurrent enrollment in MSE 201.

MSE 301 MATERIALS SCIENCE II. (3)
Introduction to processing of ceramic, polymer and composite materials; relating the structure and bonding in these materials to their properties; considerations in choosing appropriate materials for engineering applications. Prereq: MSE 201, or consent of instructor.

MSE 351 MATERIALS THERMODYNAMICS. (3)
Solution thermodynamics; partial molal quantities; ideal and non-ideal solutions; application of thermodynamics to phase equilibria; heterogeneous equilibria; free energy-composition relationships; temperature-pressure relationships. Prereq: MSE 201, MA 213 or concurrent.

MSE 395 INDEPENDENT WORK IN MATERIALS ENGINEERING. (1-3)
Research for undergraduate departmental students. May be repeated to a maximum of 12 credits. Prereq: Department major and approval of chairperson.

MSE 401G METAL AND ALLOYS. (3)
Crystal structures, phase diagrams, diffusion, nucleation and growth, deformation, recovery, recrystallization and grain growth are discussed to understand the structure-property relations in metals and alloys. Prereq: MSE 201, 301 and Engineering Standing.

MSE 402G ELECTRONIC MATERIALS AND PROCESSING. (3)
This course will examine electron behavior in a variety of materials and the processing methods used for integrated device production. Additional topics will include thin film growth, diffusion, oxidation, electronic device principals, defect control, and a survey of current challenges to the semiconductor industry. Prereq: MSE 201, MSE 301 or related engineering/science senior/graduate level courses with instructor permission.

MSE 403G CERAMIC ENGINEERING AND PROCESSING. (3)
Microstructure of crystalline ceramics and glasses, and role of thermodynamics and kinetics in its formation. Effect of microstructure on mechanical and physical properties. Prereq: MSE 201, MSE 301 or consent of instructor, Engineering standing.

MSE 404G POLYMERIC MATERIALS. (3)
Synthesis, structure, and processing of polymers, useful geometric forms, mechanical and thermal properties, crystallinity, polymer blends, evaluation of polymers for specific applications (aerospace, automotive, biomedical), laboratory activities for each of the above. Prereq: Engineering standing, CHE 230 or CHE 236. MSE 301 or consent of instructor. (Same as CME 404G.)

MSE 407 MATERIALS LABORATORY I. (3)
Various laboratory experiments that demonstrate behavior of polymers, metals, ceramics, and electronic materials. Includes instruction and practice in use of numerous instruments and equipment, typical of the materials engineering discipline. Data reduction, analysis, and interpretation is covered, as well as correct writing of reports. Prereq: MSE 202, MSE 301, MSE 351, Engineering standing. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

MSE 408 MATERIALS LABORATORY II. (3)
Various laboratory experiments that illustrate crystal structure, behavior of multi-component systems, and failure modes. Provides hands-on experience with some more advanced characterization methods of polymers, metals, and ceramics. Includes data reduction, analysis, and interpretation, as well as correct writing of reports. Prereq: MSE 407.

MSE 436 MATERIAL FAILURE ANALYSIS. (3)
A review of common engineering materials, their potential failure mechanisms and corresponding technology developed to avoid these failures. This course illustrates applications of current technology to practical industrial problems and is designed for engineers of all disciplines. Prereq: MSE 201 and EM 302 and Engineering standing.

MSE 480 MATERIALS DESIGN. (3)
A capstone engineering design experience involving analysis, with some treatments of engineering economics of real processes, design of materials, fabrication problems and techniques, and prediction of model material systems. Prereq: MSE 408.

MSE 506 MECHANICS OF COMPOSITE MATERIALS. (3)
A study of structural advantages of composite materials over conventional materials, considering high strength-to-weight and stiffness-to-weight ratios. Fiber reinforced, laminated and particulate materials are analyzed. Response of composite structures to static and dynamic

loads, thermal and environmental effects, and failure criteria are studied. Prereq: EM 302, engineering standing or consent of instructor. (Same as EM/ME 506.)

MSE 531 POWDER METALLURGY. (3)
Study of the principles of powder metallurgy relating to alloys of unusual compositions, metal and nonmetal combinations, porous and laminated products, composite metals, and high-melting alloys. Prereq: Consent of instructor.

MSE 535 MECHANICAL PROPERTIES OF MATERIALS. (3)
Introductory elasticity and plasticity theory; crystallographic nature of slip and twinning; fracture. Prereq: MSE 201, EM 302 and engineering standing or consent of instructor.

MSE 538 METALS PROCESSING. (3)
Solidification of molten alloys; fundamentals of metal working; application of metal working theories to forging, rolling, extrusion, drawing and sheet forming. Prereq: Engineering standing.

MSE 554 CHEMICAL AND PHYSICAL PROCESSING OF POLYMER SYSTEMS. (3)
Theory and practice as related to the chemical and physical processing of polymer systems. Polymer rheology, heat transfer in polymer flows, polymer engineering properties. Polymer processing operations and materials selection; flow instabilities. Prereq: CME 330, CME 425 or ME 325; or consent of instructor. This course is open only to graduate students or undergraduates with engineering standing. (Same as CME/ME/MFS 554.)

MSE 555 INTRODUCTION TO MICRO-/NANO-ELECTROMECHANICAL SYSTEMS. (3)
This course provides an overview of micromachined structures with an emphasis on operational theory and fabrication technology. Prereq: Engineering standing or consent of instructor. (Same as EE/ME 555.)

MSE 556 INTRODUCTION TO COMPOSITE MATERIALS. (3)
Modern composite materials and their applications. Basic concepts and definitions. Fundamental properties of fibers and polymer resins. Manufacturing methods. Analysis and design of laminated and chopped fiber reinforced composites. Micro- and macro-mechanical analysis of elastic constants. Failure theory of composite materials. Computational design of composites. Prereq: Engineering Standing, and EM 302 or with instructor permission. (Same as CME/ME/MFS 556.)

MSE 569 ELECTRONIC PACKAGING SYSTEMS AND MANUFACTURING PROCESSES. (3)
Study of packaging systems which interconnect, support, power, cool, protect, and maintain electronic components. The course will address systems at the chip, board, and product levels. Topics include design, properties, materials, manufacture, and performance of various packaging systems. Laboratory will provide familiarity with design software and production equipment and processes. Prereq: EE 211 or EE 305, EE 360 or MSE 402G, or consent of instructor. (Same as EE 569.)

MSE 570 FUNDAMENTALS OF NANO-ELECTRONIC DEVICES AND MATERIALS. (3)
Energy bands in crystals; heterostructures; quantum wells and low dimensional systems; the two-dimensional electron gas and MODFET; transmission in nanostructures; current topics in nanoscale devices. Prereq: EE 360 and engineering standing, or consent of instructor. (Same as EE/ME 570.)

MSE 585 MATERIALS CHARACTERIZATION TECHNIQUES. (3)
This course will present the fundamentals of x-ray and electron beam interactions with solid-state materials. Both elastic and inelastic interactions will be treated, with emphasis on elastic diffraction effects. Prereq: MSE 301 and Engineering standing, or graduate status or consent of instructor.

MSE 599 TOPICS IN MATERIALS SCIENCE AND ENGINEERING (Subtitle required). (1-4)
A detailed investigation of a topic of current significance in engineering and materials science such as: biomedical synthetics, electronic properties of materials, advances in metal working, history of materials technology, quantitative metallography. Theory of disclinations, scanning electron microscopy. May be repeated to a maximum of eight credits, but only four credits can be earned under the same title. A particular topic may be offered at most twice under the MSE 599 number. Prereq: Variable; given when topic identified.

PREREQUISITE FOR GRADUATE WORK: Students desiring to take any of the following courses should have a thorough working knowledge of chemistry, physics and mathematics.

MSE 601 INTRODUCTION TO MATERIALS SCIENCE AND ENGINEERING. (3)
The purpose of this course is to provide a general background in the field of materials science and engineering for graduate level students. Fundamental topics include chemical bonding in materials, crystal structure and defects, diffusion and phase diagrams. The mechanical, electrical and optical properties of materials will be discussed in the context of processing history and application. Important concepts such as anisotropic properties of materials and their tensor representation will be introduced. The course covers major materials systems (metals, ceramics, polymers, composites, and electronic materials) and offers examples of materials applications in a range of technical areas. Prereq: Graduate standing in chemical engineering or materials science and engineering, or consent of instructor.

Course Descriptions

MSE 607 ANALYSIS OF METAL CUTTING PROCESSES. (3)

Advanced study of metal cutting involving the mechanics of metal cutting including cutting forces, tool-wear/tool-life and temperature analysis, surface finish and integrity, chip control, machinability assessments and advances in cutting tool technology. Prereq: ME 505. (Same as ME/MFS 607).

MSE 620 COMPUTATIONAL MATERIALS SCIENCE ENGINEERING. (3)

The effective use of existing computer software in the area of materials science engineering. Use of computers to model processes and examine and predict materials properties at the macroscopic and atomistic level. Prereq: Graduate standing in physical sciences and engineering, strong background in material properties and structure similar to the material covered in MSE 401G, MSE 403G, and MSE 404G, and some programming experience in C or FORTRAN; or consent of instructor.

MSE 632 ADVANCED MATERIALS SCIENCE. (3)

Classification of solids, atomic structure and bonding, relation of structure to properties, deformation behavior and failure. Prereq: Consent of instructor.

MSE 635 ADVANCED MECHANICAL METALLURGY. (3)

Theory of dislocations in crystals and their role in strength, plasticity, work hardening and fracture of crystalline solids. Prereq: Consent of instructor.

MSE 636 DISLOCATION THEORY. (3)

Fundamentals of elastic theory of dislocations and the kinematics of dislocation motion: straight dislocations, curved dislocation, self-energies, interactions with other crystal defects, dislocation multiplication. Prereq: MSE 535 or EM 531 or equivalent.

MSE 650 ADVANCED MATERIALS THERMODYNAMICS. (3)

Study of reactions of materials with chemical environments. Introduction to irreversible thermodynamics. Emphasis on current literature. Prereq: Consent of instructor.

MSE 663 OPTOELECTRONIC DEVICES. (3)

Theory and applications of photodetectors, solar cells, semiconductor lasers, light emitting diodes and display devices, nanocrystalline structures and organic semiconductors applications in optoelectronic devices. Prereq: EE 360 or MSE 402G, consent of instructor and/or graduate standing. (Same as EE 663.)

MSE 664 MULTIDISCIPLINARY SENSORS LABORATORY. (3)

A multidisciplinary laboratory course with laboratory experiences in areas related to sensors and sensing architectures, typically including chemistry, chemical and materials engineering, and electrical engineering. Lecture, 1 hour; laboratory, 2 hours. Prereq: One year of college chemistry, calculus and physics. GS 660 or by consent of instructor. (Same as CHE/CME/EE 664.)

MSE 699 ADVANCED TOPICS IN MATERIALS SCIENCE AND ENGINEERING (Subtitle required.) (3)

A detailed investigation of an advanced topic of current significance in materials science and engineering such as (1) nanometer materials, (2) structures of superconductors and (3) materials characterization under high rates of deformation. May be repeated under different subtitles to a maximum of nine credits, but only three credits can be earned under the same title. A particular topic may be offered at most twice under the MSE 699 number. Prereq: Variable, given when topic is identified.

MSE 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

MSE 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

MSE 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

MSE 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

MSE 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

MSE 771 SEMINAR. (0)

Review of current literature in the field of metallurgical engineering and presentation of papers thereon. Presentation of talks on departmental research. Group and panel discussions. Required of all graduate students every semester. Lecture, one hour per week.

MSE 781 SPECIAL PROBLEMS, LITERATURE AND LABORATORY. (1-3)

Literature research and planning of research programs; shop problems and technical writing, including a term paper, are required. Consultation and lecture by appointment. May be repeated to a maximum of nine credits.

MSE 782 SPECIAL PROBLEMS, LITERATURE AND LABORATORY. (3)

A continuation of MSE 781. Laboratory, six hours; consultation and lecture by appointment. May be repeated to a maximum of nine credits.

MSE 790 RESEARCH IN MATERIALS SCIENCE. (3-9)

Active research (experiments, library work, theory) toward Ph.D. degree. May be repeated indefinitely.

MUC Class Instruction in Music

MUC 110 DOUBLE REED MAKING LAB. (1)

This lab is designed for double reed players to learn how to make and adjust the reeds used to play the oboe and bassoon. May be repeated to a maximum of eight semesters. Prereq: Concurrent registration in MUP oboe or bassoon, or with consent of the instructor.

MUC 150 CLASS INSTRUCTION IN PIANO. (1)

A beginning course in the fundamentals of playing the piano. Lecture, two hours. Prereq: For music majors; other students by consent of instructor.

MUC 151 CLASS INSTRUCTION IN PIANO. (1)

A beginning course in the fundamentals of playing the piano. For music majors; other students by consent of instructor. Lecture, two hours. Prereq: MUC 150.

MUC 152 CLASS INSTRUCTION IN PIANO. (1)

A course in the fundamentals of playing the piano. For music majors; others by consent of instructor. Lecture, two hours. Prereq: MUC 151.

MUC 153 CLASS INSTRUCTION IN PIANO. (1)

A course in the fundamentals of playing the piano. For music majors; others by consent of instructor. May be repeated to a maximum of two credits with consent of instructor. Instruction, two hours. Prereq: MUC 152.

MUC 155 VOICE CLASS FOR NON-MUSIC MAJORS. (1)

Applied voice group instruction for non-music majors with emphasis on basic breathing and vocal technique, elements of music notation, and diction. May be repeated to a maximum of two credits. Laboratory, two hours per week. Prereq: Consent of instructor.

MUC 157 CLASS INSTRUCTION IN PERCUSSION INSTRUMENTS. (1)

A beginning course in the fundamentals of playing and teaching percussion instruments. Instruction, three hours. Prereq: For music majors only; others by consent of instructor.

MUC 158 CLASS INSTRUCTION IN WOODWIND INSTRUMENTS. (1)

A beginning course in the fundamentals of playing and teaching woodwind instruments. May be repeated to a maximum of two credits. Prereq: For music majors; others by consent of instructor.

MUC 161 CLASS INSTRUCTION IN STRING INSTRUMENTS. (1)

A beginning course in the fundamentals of playing and teaching violin, viola, cello and string bass. May be repeated to a maximum of two credits. Prereq: For music majors; others by permission of instructor. For nonstring majors who take this course for two semesters, it must be taken sequentially beginning in the fall semester.

MUC 163 CLASS INSTRUCTION IN BRASS INSTRUMENTS. (1)

A beginning course in the fundamentals of playing and teaching brass instruments. Lecture, three hours per week. May be repeated to a maximum of two credits. Prereq: For music majors; others by consent of instructor.

CHAMBER MUSIC ENSEMBLES

MUC 170 STRING ENSEMBLE. (1)

The study of string instrument chamber music through performance. May be repeated to a maximum of eight credits. Laboratory, two hours. Prereq: Consent of instructor.

MUC 171 BRASS ENSEMBLE. (1)

The study of brass instrument chamber music through performance. May be repeated to a maximum of eight credits. Laboratory, two hours. Prereq: Consent of instructor.

MUC 172 WOODWIND ENSEMBLE. (1)

The study of woodwind instrument chamber music through performance. May be repeated to a maximum of eight credits. Laboratory, two hours. Prereq: Consent of instructor.

MUC 173 PERCUSSION ENSEMBLE. (1)

The study of percussion instrument chamber music through performance. May be repeated to a maximum of eight credits. Laboratory, two hours. Prereq: Consent of instructor.

MUC 174 UNIVERSITY CHORALE. (1)

An auditioned choral ensemble for the study of choral literature through performance. Class will meet for five hourly rehearsals per week. May be repeated to a maximum of eight credits. Prereq: Audition and consent of instructor.

MUC 176 PIANO ENSEMBLE. (1)

Study of piano ensemble chamber music through performance. May be repeated to a maximum of eight credits. Laboratory, two hours. Prereq: Consent of instructor.

MUC 177 GUITAR ENSEMBLE. (1)
The study of guitar ensemble music through performance. May be repeated to a maximum of eight credits. Laboratory, two hours. Prereq: Consent of instructor.

LARGE MUSICAL ORGANIZATIONS

MUC 175 JAZZ ENSEMBLE. (1)
Study of jazz through performance. May be repeated to a maximum of eight credits. Laboratory, three hours. Prereq: Consent of instructor.

MUC 187 CONCERT BAND. (1)
A large concert band primarily for the general student desiring continuation of instrumental music experience. Laboratory, three hours. May be repeated to a maximum of four credits. Prereq: Consent of instructor.

MUC 188 SYMPHONIC BAND. (1)
A select band engaged in preparation and performance of a variety of music composed for this medium. May be repeated to a maximum of four credits. Laboratory, four hours. Prereq: Audition and consent of instructor.

MUC 189 WIND ENSEMBLE. (1)
The University's select band for performance of challenging literature in the wind repertoire. May be repeated to a maximum of eight credits. Prereq: Audition and consent of instructor.

MUC 190 ATHLETIC BAND. (1)
Preparation for and performance at University athletic functions, primarily basketball and volleyball events. May be repeated to a maximum of eight credits. Prereq: Audition and permission of instructor.

***MUC 191 ORCHESTRA (Subtitle required). (1)**
Students who have demonstrated the required ability are given an opportunity to study and perform standard orchestral literature. May be repeated eight times for a total of eight credits. A different section of MUC 191 may be taken simultaneously. Prereq: Audition and permission of instructor.

MUC 192 UNIVERSITY CHORISTERS. (1)
Ordinarily for music majors only. Three one-hour meetings per week. May be repeated seven times for a total of eight credits. Prereq: Audition and consent of instructor.

MUC 196 OPERA WORKSHOP. (1)
Study of the principles and techniques of opera production through class presentation of scenes and complete works. May be repeated to a maximum of four credits. Prereq: Consent of instructor.

MUC 197 MOVEMENT FOR SINGERS. (1)
A course to teach movement and coordination of the body for singers. Course will also introduce different styles of movement required for singers in opera and musical theatre. May be repeated to a maximum of 8 times. Prereq: Consent of instructor.

MUC 198 OPERA PRODUCTION PRACTICUM. (1)
The study and practice of production techniques through rehearsal and performance participation. May be repeated to a maximum of 4 credit hours (1 credit hour per semester). Prereq: Consent of instructor.

MUC 423G FUNCTIONAL GUITAR SKILLS. (1)
This course is designed to impart basic guitar skills with emphasis on folk guitar, group leading, and accompanying skills. This course is geared toward music therapy majors, but is open to other students space permitting. Prereq: Permission of the instructor.

MUC 570 ADVANCED CHAMBER MUSIC ENSEMBLE. (1)
Study of chamber music through performance. May be repeated to a maximum of six credits. Laboratory, two hours. Prereq: Consent of instructor.

MUC 596 OPERA WORKSHOP. (1-3)
Study of the principles and techniques of opera production and direction through class presentation of scenes and complete works. May be repeated to a maximum of six hours. Prereq: Consent of instructor.

MUC 675 JAZZ ENSEMBLE. (1)
Study of jazz through performance. Laboratory, two hours per week. May be repeated to a maximum of six credits. Prereq: Audition and consent of instructor.

MUC 689 WIND ENSEMBLE. (1)
The University's select band for performance of challenging literature in the wind repertoire. Laboratory, three hours per week. May be repeated to a maximum of six credits. Prereq: Audition and consent of instructor.

MUC 691 ORCHESTRA. (1)
Students who have demonstrated the required ability are given an opportunity to study and perform standard orchestral literature. Laboratory, five hours per week. May be repeated to a maximum of six credits. Prereq: Audition and consent of instructor.

MUC 692 UNIVERSITY CHORISTERS. (1)
The course offers students the opportunity to learn and perform the best choral literature in the repertoire. Laboratory, three hours per week. May be repeated to a maximum of six credits. Prereq: Audition and consent of instructor.

MUP Music Performance

(SPECIAL FEE)

NOTE: Students enrolled in MUP courses for two or more credit hours may be required to attend performance classes as well as lessons. See individual course syllabus for more information.

Prereq: Satisfactory audition and/or approval of instructor.

Undergraduate Courses Numbered 100-499 (1-3)	Graduate Courses Numbered 500 and above (1-4)
Piano MUP 101, 201, 301, 401,	501, 601, 701
Voice MUP 102, 202, 302, 402,	502, 602, 702
Organ MUP 103, 203, 303, 403,	503, 603, 703
Violin MUP 104, 204, 304, 404,	504, 604, 704
Viola MUP 105, 205, 305, 405,	505, 605, 705
Cello MUP 106, 206, 306, 406,	506, 606, 706
String Bass MUP 107, 207, 307, 407,	507, 607
Flute MUP 108, 208, 308, 408,	508, 608, 708
Oboe MUP 109, 209, 309, 409,	509, 609, 709
Clarinet MUP 110, 210, 310, 410,	510, 610, 710
Bassoon MUP 111, 211, 311, 411,	511, 611, 711
Trumpet MUP 112, 212, 312, 412,	512, 612, 712
French Horn MUP 113, 213, 313, 413,	513, 613, 713
Trombone MUP 114, 214, 314, 414,	514, 614, 714
Euphonium MUP 115, 215, 315, 415,	515, 615
Tuba MUP 116, 216, 316, 416,	516, 616, 716
Saxophone (alto) MUP 117, 217, 317, 417,	517, 617, 717
Percussion MUP 118, 218, 318, 418,	518, 618, 718
Harp* MUP 119, 219, 319, 419,	519, 619
Harpsichord MUP 120, 220, 320, 420,	520, 620
English Horn MUP 321,	521
Historical Instruments* MUP 322, 422,	522, 622
Classical Guitar MUP 123, 223, 323, 423,	523, 623

Consult the School of Music before enrolling.

MUP 330 VOCAL COACHING FOR SINGERS. (1-3)
A course to prepare the vocal student for performance in concert, recital, and opera. Materials to be covered include style, performance practices, diction, interpretation, and audition preparation. Course will include preparation of operative as well as art song literature. Repertoire suitable for the individual student will be assigned by the voice teacher and prepared

Course Descriptions

in this course by the vocal coach only after the music has been technically prepared by student's individual voice teacher. May be repeated to a maximum of six credits. Prereq: Permission of vocal instructor.

MUP 430 VOCAL COACHING FOR SINGERS. (1-3)

A course to prepare the vocal student for performance in concert, recital, and opera. Materials to be covered include style, performance practices, diction, interpretation, and audition preparation. Course will include preparation of operative as well as art song literature. Repertoire suitable for the individual student will be assigned by the voice teacher and prepared in this course by the vocal coach only after the music has been technically prepared by student's individual voice teacher. May be repeated to a maximum of six credits. Prereq: Permission of vocal instructor.

MUP 440 UNDERGRADUATE DEGREE RECITAL. (0)

This course provides a capstone senior experience. B.M. Performance majors must present a full senior recital with a duration of a minimum of 50 minutes and consists largely of solo compositions. B.M.M.E. students must present a senior recital with a duration of a minimum of 25 minutes of music and consists largely of solo compositions. Prereq: Approval of Applied Professor and passing of pre-recital hearing.

MUP 530 VOCAL COACHING FOR SINGERS. (1-3)

A course to prepare the vocal student for performance in concert, recital, and opera. Materials to be covered include style, performance practices, diction, interpretation, and audition preparation. Course will include preparation of operatic as well as art song literature appropriate to designated course level. May be repeated to a maximum of six credits. Prereq: Permission of vocal/opera instructors.

MUP 558 CONDUCTING. (1-4)

Private instruction in advanced conducting. Prereq: MUS 358 or MUS 364 or MUS 365 or consent of instructor.

MUP 630 VOCAL COACHING FOR SINGERS. (1-3)

A course to prepare the vocal student for performance in concert, recital, and opera. Materials to be covered include style, performance practices, diction, interpretation, and audition preparation. Course will include preparation of operatic as well as art song literature appropriate to designated course level. May be repeated to a maximum of six credits. Prereq: Permission of vocal/opera instructors.

MUP 640 GRADUATE DEGREE RECITAL. (0)

This course provides capstone experience for M.M. and D.M.A. in Performance majors who must present full recitals and lecture-recitals that consist of a minimum of 50 minutes and consists mainly of solo and chamber compositions. Prereq: Approval of applied professor and passing of pre-recital hearing.

MUP 658 CONDUCTING. (1-4)

Private instruction in advanced conducting. Prereq: MUS 358 or MUS 364 or MUS 365, or consent of instructor.

MUP 730 VOCAL COACHING FOR SINGERS. (1-3)

A course to prepare the vocal student for performance in concert, recital, and opera. Materials to be covered include style, performance practices, diction, interpretation, and audition preparation. Course will include preparation of operatic as well as art song literature appropriate to designated course level. This course may only be taken after all applied vocal lesson requirements have been met. Prereq: Permission of vocal/opera instructors.

MUP 758 CONDUCTING. (1-4)

Private instruction in advanced conducting. May be repeated to a maximum of six credits. Prereq: Consent of instructor.

One-Hour Credit

The following may register for one-hour credit performance courses:

- 1) Music majors electing a secondary instrument or a major instrument credit by direction of the adviser to fulfill degree performance requirements.
- 2) Students from other divisions of the University desiring elective credit but only upon approval of the School of Music.

Students in one-hour credit performance courses for secondary instrument credit may be taught in studio groups of four or less. Each undergraduate one-hour course may be repeated twice for credit. Each graduate one-hour course may be repeated three times for credit.

Two-Hour Credit

The following may register for two-hour credit performance courses:

- 1) Music majors in the Music Education or B.A. in Music degree programs;
- 2) Music minors;
- 3) Graduate students by direction of the adviser.

Each undergraduate two-hour course may be repeated twice for credit. Each graduate two-hour course may be repeated three times for credit.

Three-Hour Credit

The following may register for three-hour credit performance courses:

- 1) Music majors in the B.M. or M.M. in performance degree programs;
- 2) D.M.A. students by direction of the adviser.

Each undergraduate three-hour course may be repeated twice for credit. Each graduate three-hour course may be repeated three times for credit. Not offered during the summer session.

Four-Hour Credit

Only graduate students in the music performance programs may register for four-hour courses. These courses are available only at the 600- and 700-levels. Doctoral students only may register for 700-level courses. Four-hour credit courses may be repeated three times for credit. Not offered during the summer session.

MUS

Music

MUS 001 RECITAL ATTENDANCE. (0)

The course will consist of attendance at recitals. Each freshman and sophomore student must attend a minimum of 16 concerts per semester (for a total of four semesters), to be chosen from faculty recitals, senior or graduate recitals, concerts by UK ensembles, Tuesday noon student recitals, Chamber Music series, Central Kentucky Concert and Lecture Association, and Gallery Series. One-hour lab per week. Grade: P or F.

MUS 100 INTRODUCTION TO MUSIC. (3)

A study of the elements of music as they apply to the listening experience; designed for the nonmusic major with no prior knowledge of music. Emphasis will be placed upon developing an awareness and understanding of musical styles from the Renaissance to the present. Music majors may not use this course to fulfill either General Studies, University Studies, or music history requirements.

MUS 120 FOREIGN LANGUAGE VOCAL DICTION. (1)

A study of diction factors in Italian, German, and French vocal music. Lecture, two hours. May be repeated to a maximum of three hours. Prereq: Consent of instructor.

MUS 123 BEGINNING CLASSROOM GUITAR. (3)

MUS 123 will be an introductory course for guitar playing as well as a study of the history and repertoire of the guitar. Included will be assigned reading on the different manifestations of the guitar through historical and cross-cultural studies. Prereq: Students must have little or no knowledge of classical/general guitar playing. If students have some experience, ask about MUP 123, Guitar Lessons.

MUS 130 PERFORMING WORLD MUSIC (Subtitle required). (3)

This course fulfills three Arts and Creativity credit hours in the UK Core curricular framework. Through lectures, class discussions, and participation in ensemble rehearsals, students will be introduced to the musical traditions and performance practice of several world cultures. The class will also introduce elements of ethnomusicological study, and promote a better understanding of the way creativity and the arts (music, dance, theater) function within each society.

MUS 140 ACOUSTICS OF MUSIC. (3)

In this class you will investigate the basic principles relating to the nature and production of musical sound. An understanding of these principles will enable you to make meaningful comparisons among sounds, appreciate how the characteristics of sound are dependent on the way it is created, and apply your knowledge in making health conscious decisions concerning the sound environment in which you live. In addition, you will gain some understanding of the acoustical principles in the design of instruments and performance spaces.

MUS 170 THEORY I – ELEMENTARY AURAL THEORY. (2)

Development of aural responsiveness to all elements of music, and of sight-singing techniques as an aid to music comprehension and performance. Prereq: Satisfactory completion of Theory Placement Exam; prereq or concur: MUS 171.

MUS 171 THEORY I – ELEMENTARY WRITTEN THEORY. (2)

The acquisition of harmonic vocabulary and development of part-writing techniques, elementary counterpoint, free composition, and analysis. Prereq: Open only to Music Majors, Music Minors and Arts Administration Majors.

MUS 172 THEORY I – ELEMENTARY AURAL THEORY. (2)

Development of aural responsiveness to all elements of music, and of sight-singing techniques as an aid to music comprehension and performance. Prereq: MUS 170; prereq or concur: MUS 173

MUS 173 THEORY I – ELEMENTARY WRITTEN THEORY. (2)

The continuation of the work of MUS 171. Lecture, three hours. Prereq: MUS 171.

MUS 174 THEORY FOR NONMUSIC MAJORS. (3)

An introduction to the basic materials of musical organization, focusing on music reading, rudiments of notation, pitch, scale, tonal, and rhythmic organization, melodic construction, simple harmonic vocabulary, and beginning aural training. Individual composition and improvisation exercises are used to approach much of this material. Ability to read music is not a prerequisite.

- MUS 200 MUSIC FOR LIVING.** (3)
This course is designed for undergraduate students who wish to gain a global perspective and understanding of the role of music in life and culture, advancements in music, and the impact of music on our own lives. Students will gain a broad musical vocabulary, explore the elements of music relevant to various cultures across time, and contemplate the role of music in their own lives and society through assignments and a collaborative creative project. Prereq: Sophomore standing.
- MUS 202 MUSIC IN WESTERN CULTURE, 1700-PRESENT.** (3)
A survey of music from 1700 (Vivaldi, Bach, Handel) to the present, in the context of artistic, cultural, political, and social changes in the Western cultural community. Music majors may not use this course to fulfill either University Studies or degree requirements.
- MUS 203 HISTORY OF MUSIC I.** (3)
Survey of the history of music from the Medieval through the Baroque period (approximately 800 - 1750). Required of all music majors. Prereq: For music majors, sophomore standing; non-music majors, consent of instructor.
- MUS 206 AMERICAN MUSIC.** (3)
A history of music in America from c. 1620 to the present. Will require listening to recordings, reading the primary text and suggested readings in books, periodicals and documents. Students should become aware of important names, places, events and styles in music as well as important historical trends and movements.
- MUS 220 SYMPHONIC MUSIC.** (3)
A survey of the symphonic repertoire from the Classical through the Contemporary Periods. Emphasis will include the development of listening skills and an awareness of musical styles. Music majors may not use this course to fulfill University Studies or degree requirements.
- MUS 222 CREATIVITY AND INNOVATION IN ROCK MUSIC.** (3)
Through lectures, discussions, and class participation in musical activities, students will be introduced to the fundamental elements of rock music, the artists and stylistic periods in rock history, and the cultural and social issues rock has raised in the United States. The class will promote a better understanding of the way creativity impacts rock lyrics, compositional processes, and will also introduce elements of ethnomusicology to study issues of rock's creative presentation of identity, gender, race, sexuality, and ethnicity.
- MUS 262 VOCAL MUSIC METHODS AND MATERIALS SEMINAR I.** (3)
Development of personal philosophy of music education. Elements of singing posture, breathing, diction and choral tone. Demonstration of effective choral warm-ups. Beginning conducting and rehearsal keyboard skills. Prereq: MUS 172, 173, or consent of instructor.
- MUS 263 INSTRUMENTAL MUSIC METHODS AND MATERIALS SEMINAR I.** (3)
Historical and philosophical foundations of music education. Comprehensive study of teaching methods and materials for instrumental music in the elementary and early middle schools. Secondary instrument performance and group teaching. Observations in the public schools with emphasis on the elementary and middle school levels. Prereq: MUS 172 and 173 or consent of instructor.
- MUS 264 VOCAL MUSIC METHODS AND MATERIALS SEMINAR II.** (3)
Comprehensive study of teaching methods and materials for choral music in the middle school and high school. Study of the changing voice and supervised experimental teaching in middle school. Audition procedures, placement of voices, sight-reading methods and evaluation of repertoire. Beginning to intermediate choral conducting, keyboarding skills. Prereq: MUS 262.
- MUS 265 INSTRUMENTAL MUSIC METHODS AND MATERIALS SEMINAR II.** (3)
A study of the organization and administration of the school instrumental music program. Repertoire for secondary school bands and orchestras. Study of teaching methods, styles, and music literature for the high school jazz band. Continuation of observations and visitations. Continuation of secondary instrument performance and group teaching. Prereq: MUS 263.
- MUS 266 TEACHING MUSIC IN ELEMENTARY GRADES.** (3)
Music fundamentals, methods and materials for elementary school teachers. For non-music majors only.
- MUS 270 THEORY II – AURAL THEORY.** (2)
Development of aural responsiveness to all elements of music, and of sight-singing techniques as an aid to music comprehension and performance. Prereq: MUS 172; prereq or concur: MUS 271.
- MUS 271 THEORY II – WRITTEN THEORY.** (2)
A continuation of the acquisition of harmonic vocabulary and development of part-writing techniques, elementary counterpoint, free composition, and analysis. Prereq: MUS 171, 173.
- MUS 272 THEORY II – AURAL THEORY.** (2)
Development of aural responsiveness to all elements of music, and of sight-singing techniques as an aid to music comprehension and performance. Prereq: MUS 270; prereq or concur: MUS 273.
- MUS 273 THEORY II - WRITTEN THEORY.** (2)
The continuation of the work of MUS 271. Three class hours per week. Prereq: MUS 271.
- MUS 300 HISTORY OF JAZZ.** (3)
A listening survey course covering the chronological evolution of jazz from its West African and European roots, through its germination in America, to the present. Emphasis will be on the various styles and functions of jazz, particularly as they have been affected by changing social-cultural patterns during the twentieth century. (Same as AAS 300.)
- MUS 301 APPALACHIAN MUSIC.** (3)
A survey of musical genre and styles in the Southern Appalachian region. Vocal and instrumental, sacred and secular materials will be covered, together with the interchanges between black and white contributions.
- MUS 302 HISTORY OF MUSIC II.** (3)
A survey of the history of European music during the Classic and Romantic periods of the 18th and 19th centuries. Required of all music majors. Prereq: For music majors, MUS 203 and junior standing; non-music majors, consent of instructor.
- MUS 303 HISTORY OF MUSIC III.** (3)
A survey of the history of music from the Twentieth century including vernacular and cultivated musical expression of the United States. Required of all music majors. Prereq: Music majors - junior standing; non-music majors - consent of instructor.
- MUS 304 MUSIC COMMUNICATION I: ORAL COMMUNICATION OF MUSIC.** (1)
This course is the first of a two-course sequence (with MUS 305), designed to develop students' written and oral communication skills and information literacy in music. MUS 304 focuses on oral communication. To be taken simultaneously with MUS 302. With MUS 305, satisfies the Graduation Composition and Communications Requirement. Prereq: Junior standing in music. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.
- MUS 305 MUSIC COMMUNICATION II: WRITTEN COMMUNICATION OF MUSIC.** (1)
This course is the second of a two-course sequence (with MUS 304), designed to develop students' written and oral communication skills and information literacy in music. MUS 305 focuses on written communication. To be taken simultaneously with MUS 303. With MUS 304, satisfies the Graduation Composition and Communications Requirement. Prereq: Junior standing in music; MUS 302 and MUS 304. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.
- MUS 317 MUSIC TECHNOLOGY.** (1)
An introductory instructional media experience including basic production and utilization techniques for media materials and operation of commonly used educational media equipment. Topics include audio/video materials, notation software, music sequencing software, website design software, Internet/web-based education, and electronic portfolios. Prereq: Admission to the Teacher Education Program (TEP).
- MUS 325 SHAKESPEARE AND MUSIC.** (3)
The study of music inspired by the plays of Shakespeare, Shakespeare's use of music in his plays, and an overview of music in Elizabethan times. The course is designed for non-majors.
- MUS 330 MUSIC IN THE WORLD (Subtitle required).** (3)
This course examines the music of a chosen country or region of the world. The study of the historical, stylistic, theoretical, and functional aspects of the music will be related to the socio-historical, philosophical and other cultural aspects of the people in that country or region. Prereq: Junior standing or permission of the instructor.
- MUS 335 EXPLORING WORLD MUSIC AND ETHNOMUSICOLOGY.** (3)
In this course, we will learn some of the basic concepts and methodologies of ethnomusicology while engaging with the styles and practices of various world musical cultures around the world, including that of China, Bulgaria, Ireland, India, Sub-Saharan Africa, Korea, Native America, Bali and Cuba. There will also be an emphasis on performance and musical participation, community-based learning and applied ethnomusicology. We will also explore methodologies such as participant-observation, site-specific fieldwork and small-scale service activities. Be prepared to embody the music as much as possible through in-class singing, playing, dancing and taking part in performance workshops. This class is designed for students with some musical background. Prereq: Junior standing or permission of instructor.
- MUS 350 MUSIC EDUCATION WORKSHOP.** (1-2)
Intensive study of specialized methods and materials in one of the following areas of music education: elementary and general music; piano; orchestra, band; jazz or choral. May be repeated to a maximum of four credits. Prereq: Consent of instructor.
- MUS 358 CONDUCTING I.** (2)
A study of the technique and practice of fundamentals of conducting. Prereq: Junior standing in music.
- MUS 360 GENERAL MUSIC I.** (3)
A study of the philosophy, the curriculum, and the process involved in promoting musical development of children in the elementary, middle, and high school environment. A field experience is required. Prereq: Junior standing in music.
- MUS 361 GENERAL MUSIC II.** (3)
Methods, materials and techniques of teaching general music with emphasis on activities for the early childhood and elementary children. A field experience is required. Prereq: MUS 360.

MUS 362 VOCAL MUSIC METHODS AND MATERIALS SEMINAR III. (3)

A continuation of 262 and 264. Study of performance practice and rehearsal techniques for the choral music of each historical period. Conducting/study of the literature for the high school chorus. A study of the organization and administration of the school choral program. Prereq: MUS 262, 264.

MUS 363 INSTRUMENTAL MUSIC METHODS AND MATERIALS SEMINAR III. (3)

A continuation of MUS 263 and 265. Beginning to intermediate instrumental conducting. An introduction to teaching high school marching band; fundamentals, administrative procedures, drill writing, music selection and rehearsal. Continuation of secondary instrument performance and group teaching. Continued observation in the public schools with emphasis on high school bands and orchestras. Prereq: MUS 265.

MUS 365 INSTRUMENTAL MUSIC METHODS AND MATERIALS SEMINAR IV. (3)

Advanced conducting; emphasis on advanced rehearsal techniques with use of instructional materials and advanced music for the high school ensemble. Continuation of secondary instrument performance and group teaching. Continued observation in the public schools with options for teacher-aide assignment. Prereq: MUS 363.

MUS 366 MARCHING BAND TECHNIQUES. (2)

A study of techniques, styles and trends with emphasis on drill writing, music arranging, and administrative/instructional methods as they relate to the contemporary marching band. A combination of lecture and laboratory instruction will be utilized. Prereq: Consent of instructor.

MUS 370 THEORY III - ADVANCED HARMONY AND COUNTERPOINT. (2)

A study of the 19th century harmonic idioms through projects in analysis and composition. Lecture, three hours. Prereq: MUS 273.

MUS 371 INSTRUMENTATION AND ARRANGING. (2)

A basic course in instrumentation and arranging for typical school instrumental and vocal ensembles. Prereq: MUS 273.

MUS 372 MUSICAL ANALYSIS. (2)

A study of musical style through structural, harmonic and melodic analyses. Prereq: MUS 273.

MUS 390 TOPICS IN MUSIC HISTORY (Subtitle required). (3)

Studies of a specific composer, genre, school of composers, or a topic crossing the traditional boundaries of music history. May be repeated to a maximum of six credits when identified by different course subtitles. Prereq: MUS 203, 302, and 303, or consent of instructor.

MUS 395 INDEPENDENT WORK IN MUSIC. (1-3)

May be repeated to a maximum of six credits. Prereq: Major in music and a standing of 3.0 or consent of instructor.

MUS 400G MUSIC HISTORY REVIEW. (3)

A review of music history from the Medieval period through the twentieth century. May not be used to satisfy major requirements for Bachelors degrees in the College of Fine Arts. Prereq: Provisional graduate standing.

MUS 430G MUSIC THERAPY FOUNDATIONS AND PRINCIPLES I. (3)

This course is directed toward developing entry-level competencies needed in the field of music therapy. Prereq: Permission of instructor.

MUS 431G MUSIC THERAPY FOUNDATIONS AND PRINCIPLES II. (3)

This course is a continuation of Music Therapy Foundations and Principles I and is directed toward developing entry-level competencies needed in the field of music therapy. Prereq: MUS 430G or permission of instructor.

MUS 432G MUSIC THERAPY APPLICATIONS. (3)

This course is directed toward developing entry-level competencies needed in the field of music therapy. MUS 432G builds on the music therapy principles and foundations established in MUS 430G and 431G, specifically focusing on professional applications. Prereq: MUS 430G and MUS 431G or permission of instructor.

MUS 433G MUSIC THERAPY CLINICAL INTERNSHIP. (3)

This course involves off-site clinical experiences in a student-selected area of interest. Students will complete a minimum of 900 hours and a maximum of 1044 hours of internship-based clinical training in medical, psychiatric, special education, geriatric or other clinical music therapy setting. Prereq: All music therapy equivalency course work must be completed prior to internship.

MUS 434G MUSIC THERAPY CLINICAL SKILLS. (2)

This course is designed to teach clinical applications of music skills (folk/rock guitar, percussion skills) and group leading/therapeutic interaction skills for music therapy practice. Students will have the opportunity to develop these skills in the classroom setting and implement the skills in community-based experiences. Special emphasis will be placed on developing the ability to simultaneously implement both music and group leading/interaction skills. Prereq: Permission of the instructor.

MUS 435G ANATOMY FOR MUSIC THERAPY PRACTICE. (3)

This course is an introduction to basic terminology related to human anatomy with an added emphasis on applications of this information to multiple aspects of the practice of music

therapy. Students will learn to identify important physical components of anatomical systems and relate knowledge of human systems to personal health and wellness, needs of client populations, music performance, music therapy research, and human physiology. Prereq: Music therapy major or permission of instructor.

MUS 470G REVIEW OF HARMONY. (1)

A review of common practice diatonic and chromatic harmony, through written work and analysis. May not be used to satisfy major requirements for Bachelors degrees in the College of Fine Arts. Lecture, two hours per week. Prereq: Provisional graduate standing.

MUS 471G REVIEW OF AURAL SKILLS. (1)

A review and continued development of basic listening skills, and the ability to comprehend aurally harmonic function within a tonal framework and musical structures, both micro-structures and macro-structures. May not be used to satisfy major requirements for Bachelors degrees in the College of Fine Arts. Lecture, two hours per week. Prereq: Provisional graduate standing.

MUS 500 MUSIC OF THE MIDDLE AGES. (3)

The development of Western music through the 14th century. Prereq: MUS 203 or consent of instructor.

MUS 501 MUSIC OF THE RENAISSANCE. (3)

A survey of vocal and instrumental music of the 15th and 16th centuries. Prereq: MUS 203 or consent of instructor.

MUS 502 MUSIC OF THE BAROQUE ERA. (3)

The history of vocal and instrumental music in the Baroque style from 1600 to 1750. Prereq: MUS 302 or consent of instructor.

MUS 503 MUSIC OF THE CLASSIC PERIOD. (3)

The development of music in the Classic style from the early 18th century to 1800. Prereq: MUS 302 or consent of instructor.

MUS 504 MUSIC OF THE 19th CENTURY. (3)

A study of master works of music composed in the 19th century. Prereq: MUS 303 or consent of instructor.

MUS 505 MUSIC OF THE 20th CENTURY. (3)

A stylistic study of representative compositions of the 20th century. Prereq: MUS 303 or consent of instructor.

MUS 506 HISTORY OF AMERICAN MUSIC. (3)

A survey of cultivated and vernacular musical styles in America from Colonial times to the present. Prereq: MUS 302 and 303 or consent of instructor.

MUS 507 TOPICS IN MUSIC HISTORY AND LITERATURE (Subtitle required). (3)

A focused study of a single composer, genre, or musical topic. May be repeated, with different subtitles, for up to 9 credits. Prereq: Junior or graduate standing in music. MUS 203, 302, and 303, or permission of instructor.

MUS 520 VOCAL SOLO LITERATURE. (3)

A stylistic study of solo vocal music from the Baroque to the present. Prereq: MUS 302 and 303 or consent of instructor.

MUS 521 ORGAN LITERATURE. (3)

A course of study designed to give the organ student a practical knowledge of the development of the organ, its construction, the standard literature, and teaching materials. Prereq: MUS 302 and 303 or consent of instructor.

MUS 522 PIANO LITERATURE TO 1830. (3)

An historical and analytical study of music for piano to 1830, including discussion of the development of the instrument and the emergence of the idiomatic piano writing. Prereq: MUS 302 or consent of instructor.

MUS 523 PIANO LITERATURE SINCE 1830. (3)

A historical and analytical study of music written for the piano from the inception of the Romantic period to the present, from the parallel perspectives of changes in the approach to the instrument and stylistic developments as they are reflected in piano writing. Prereq: MUS 303 or permission of instructor.

MUS 540 APPLICATIONS OF MUSIC TECHNOLOGY. (3)

Applications of music technology hardware and software, including but not limited to MIDI systems, sequencing, notation software, and MIDI code. Emphasis will be on use of technology as tools for creativity and productivity. Content will be continually updated. No prior computer or MIDI experience assumed; space preference given to music majors. Prereq: Nonmusic majors must obtain permission of instructor; ability to read music required.

MUS 550 TOPICS IN MUSIC EDUCATION (Subtitle required). (1-3)

In-depth study of a designated topic, special issue, philosophy, or methodology of music education. May be repeated to a maximum of nine credits when identified by different course subtitles. Prereq: Junior standing in music.

MUS 555 SOUNDS OF MUSIC: PSYCHOLOGY AND PERCEPTION. (3)

This course focuses on the roles of music in human life. Issues and research findings regarding what makes music and how human beings perceive and respond to musical sounds are examined.

Critical thinking and reflection on topics such as music preferences, musical performance, and listening to music are meant to encourage the student to identify the relationship between music and human behavior. This course is suitable for students who are curious to learn about the influence of music on people. It is open to all students with or without musical training.

MUS 560 ORFF SCHULWERK. (1-3)
The study of the philosophy and the pedagogy of the Orff Schulwerk method through movement, discussion, performance, improvisation, composition, and demonstration. Number of credits awarded will depend on total number of hours of participation and the amount of work in musical arrangement, orchestration, and composition. May be repeated to a maximum of six credits. Prereq: Junior standing in music or approval of instructor.

MUS 561 ORFF CERTIFICATION: LEVEL I, II, OR III. (2)
An intensive and systematic study of the philosophy and the pedagogy of the Orff Schulwerk method based on the curriculum recommended by the American Orff Schulwerk Association. The three main components are ensemble, recorder, and movement. Participants must demonstrate competency in orchestration, recorder, and pedagogy in order to obtain certification. Lecture, two hours; laboratory, two hours per week. May be repeated in sequence to a maximum of six credits. Prereq: Junior standing in music or approval of instructor.

MUS 566 PIANO PEDAGOGY. (3)
Investigation of techniques and materials for teaching piano in groups and to individual students, both children and adults. Prereq: Consent of instructor.

MUS 570 ORCHESTRATION. (2)
This course includes a study of the individual instruments of the orchestra and band with practice in scoring for these instruments. Prereq: MUS 371.

MUS 571 ORCHESTRATION. (2)
A continuation of MUS 570. Prereq: MUS 570.

MUS 572 COUNTERPOINT. (3)
A study of 16th century contrapuntal techniques and of contrapuntal influences in common-practice music. Prereq: MUS 273 or equivalent.

MUS 573 COUNTERPOINT. (3)
A study of 18th century contrapuntal techniques and of contrapuntal influences in Romantic and 20th century music. Prereq: MUS 273 or equivalent.

MUS 574 COMPOSITION. (2)
A basic course in original composition and orchestration. Prereq: MUS 371.

MUS 575 COMPOSITION. (2)
A continuation of MUS 574. Prereq: MUS 574.

MUS 578 ANALYSIS AND STYLE SURVEY. (3)
Studies in analytical terminology and methodology; survey of major stylistic practices of Western music. Prereq: MUS 372 or equivalent.

MUS 600 RESEARCH I. (3)
A course designed to acquaint students with basic techniques and tools used in music education research.

MUS 601 FOUNDATIONS IN MUSIC EDUCATION. (3)
An historical survey of thought concerning the place and significance of music in the education of the individual and the group.

MUS 618 RESEARCH METHODS. (3)
A survey of basic research techniques and materials in musicology and theory. Prereq: A reading knowledge of French or German.

MUS 620 ADVANCED VOCAL REPERTORY (Subtitle required). (3)
An intensive study of the stylistic and interpretive characteristics of solo vocal literature of a specified repertory. May be repeated as desired with different subtitles. Prereq: Graduate standing or consent of instructor.

MUS 622 SYMPHONIC LITERATURE. (3)
An intensive study of orchestral literature from the classical period to the present. Prereq: Graduate standing in music or consent of instructor.

MUS 623 OPERA LITERATURE I. (3)
An intensive study of the history and literature of opera from its origins around 1600 through the early Romantic period. Prereq: Graduate standing in music or consent of instructor.

MUS 624 CHAMBER MUSIC LITERATURE. (3)
An intensive study of the development of instrumental chamber music. Prereq: Graduate standing in music or consent of instructor.

MUS 625 CHORAL LITERATURE. (3)
An intensive study of choral literature from the Renaissance period to the present. Prereq: Graduate standing or consent of instructor.

MUS 627 OPERA LITERATURE II. (3)
An intensive study of the history and literature of opera from the early Romantic period through the present. Prereq: Graduate standing in music or consent of instructor.

MUS 630 MEDICAL MUSIC THERAPY. (3)
This course is directed toward developing advanced competencies in medical music therapy

objectives. Current research related to medical music therapy, current laws and regulations governing medical practice, and current music therapy theory related to the practice of music therapy in a medical setting will be addressed. Prereq: Permission of the instructor.

MUS 631 MUSIC IN COUNSELING. (3)
This course is directed toward developing advanced competencies in music therapy theory and clinical skills. Specifically, the use of music in counseling and the development of counseling techniques appropriate in music therapy will be addressed. Prereq: Permission of the instructor.

MUS 633 GRADUATE CLINICAL PLACEMENT IN MUSIC THERAPY. (1-3)
This course is directed toward the development of advanced clinical skills in music therapy in an area chosen by the student in consultation with program faculty. Prereq: Permission of instructor and satisfactory completion of MUS 433G.

MUS 648 MUSIC SOFTWARE TECHNOLOGY. (3)
This course is directed toward developing advanced competencies in music technology common to the fields of music education and music therapy. Supervised projects will be a large component of this course and projects will be individualized based on students' educational track and career goals. All course instructional materials are conducted online but there are three face-to-face meetings during the second half of the course. Two of these meetings are individual conferences with the instructor, and one is for presentation of the project on Saturday morning of the last week of class schedule. Prereq: Permission of instructor.

MUS 650 MUSIC EDUCATION WORKSHOP. (1-4)
Intensive study of advanced methods and materials in one of the following areas of music education: elementary and general music, the school orchestra, the school band, choral music. May be repeated once for a total of two, three or four credits.

MUS 660 ADVANCED MUSIC EDUCATION METHODS AND MATERIALS (Subtitle required). (3)
An in-depth study and analysis of the methodology and materials and their development in music education. May be repeated to a maximum of 12 credits when identified by different course subtitles. Prereq: Graduate standing or consent of instructor.

MUS 662 DALCROZE APPROACH I. (3)
This course is especially designed for music teachers who wish to acquire knowledge and skills in Dalcroze pedagogy and musicianship. There are two parts of this course: on-site participation and a Blackboard component. Students will be immersed in the principal subjects of the Dalcroze approach: eurhythmics, solfège, and improvisation. The on-site session provides creative experiences of hands-on activities and the Blackboard component covers assignments related to the philosophy, history, composition, lesson designs, and discussion of the Dalcroze approach in music education.

MUS 663 DALCROZE APPROACH II. (3)
This course is especially designed for music teachers who wish to acquire knowledge and skills in Dalcroze pedagogy and musicianship. There are two parts of this course: on-site participation and a Blackboard component. Students will be immersed in the principal subjects of the Dalcroze approach: eurhythmics, solfège, and improvisation. The on-site session provides creative experiences of hands-on activities and the Blackboard component covers assignments related to the philosophy, history, composition, lesson designs, and discussion of the Dalcroze approach in music education. Prereq: Successful completion of MUS 662 or equivalence and permission by instructor.

MUS 664 MUSIC AND SPECIAL LEARNERS. (3)
This course provides an overview of the characteristics and instructional needs of special learners. Students will be introduced to administrative issues and laws governing special educational practices in the public school setting. Educational strategies and adaptations/modifications will be addressed with emphasis on applications in the music setting. Teaching adult learners and gifted students will be included, as will therapeutic uses of music appropriate for music therapists working in special education settings. A field experience is required. Prereq: Consent of instructor.

MUS 665 PHYSIOLOGY AND FUNCTIONING OF THE SINGING VOICE. (3)
Detailed study of vocal physiology and acoustics of the singing voice. Major historical sources and recent scientific research form the basis of the course. Designed for professional voice teachers and music educators who work with singers. Prior study of acoustics recommended.

MUS 666 ADVANCED ORFF SCHULWERK. (1-3)
For experienced music teachers who already had basic Orff Schulwerk training. This course enables students to advance their musicianship, refine pedagogic techniques, and/or do research in Orff Schulwerk. Prereq: MUS 561 – equivalent to Level Two Orff-Schulwerk Teacher Training or permission of the instructor.

MUS 667 MATERIALS, TECHNIQUES AND LITERATURE OF VOICE TRAINING. (3)
Survey of currently published books, anthologies, and other materials for voice teaching. Various approaches to teaching vocal technique will be examined; other pertinent literature explored. Prereq: MUS 665.

MUS 668 DALCROZE APPROACH III. (3)
This course is especially designed for music teachers who wish to acquire knowledge and skills in Dalcroze pedagogy and musicianship. There are two parts of this course: on-site partici-

pation and a Blackboard component. Students will be immersed in the principal subjects of the Dalcroze approach: eurhythmics, solfège, and improvisation. The on-site session provides creative experiences of hands-on activities and the Blackboard component covers assignments related to the philosophy, history, composition, lesson designs, and discussion of the Dalcroze approach in music education. Prereq: Successful completion of MUS 663 or equivalence and permission by instructor.

MUS 669 INDIVIDUAL DALCROZE PROJECT. (3)

This course is especially designed for music teachers who have acquired adequate knowledge and skills in Dalcroze pedagogy and musicianship and are ready to demonstrate independence in designing and completing an instructional or research project that exemplifies the Dalcroze approach. The student is guided at a distance by the instructor at all phases of the project and carry out the study at his or her own school or location. Prereq: a) Successful completion of MUS 663 (or equivalent) and permission by instructor, or b) successful completion of MUS 668.

MUS 670 ANALYSIS OF TONAL MUSIC I. (3)

An introduction to and exploration of analytical techniques and issues relevant to music before 1900, addressing as well the performance implications of analytical decisions insofar as possible. Various musical dimensions will be studied including motivic structure, meter/rhythm, harmonic syntax, formal processes and text/music relationships. Prereq: MUS 578 or equivalent.

MUS 671 ANALYSIS OF TONAL MUSIC II. (3)

Introduction to the theories of Heinrich Schenker, their application to the analysis of tonal music and to performance. Intensive analytical work and selected readings. Prereq: MUS 578 or equivalent.

MUS 672 ANALYSIS OF MUSIC SINCE 1900 I. (3)

An introduction to and exploration of analytical techniques and issues relevant to the literature since 1900, addressing as well the performance implications of analytical decisions insofar as possible. Various musical dimensions will be studied including motivic structure, meter/rhythm, harmonic syntax, formal processes and text/music relationships. Prereq: MUS 578 or equivalent.

MUS 673 ADVANCED COMPOSITION. (2)

May be repeated to a maximum of six credits. Prereq: MUS 575.

MUS 674 PEDAGOGY OF THEORY. (3)

Examination of the resources and techniques of teaching undergraduate music theory (aural and written components). Extensive review of the textbook literature, study of the application of contrasting theoretical approaches, and the examination of relevant Computer Assisted Instruction materials. Requirements to include practice teaching and observation of undergraduate music theory classes (MUS 171-173; 271-273; 170-172; 270-272). Prereq: MUS 578 or equivalent.

MUS 675 INTERNSHIP IN THEORY PEDAGOGY. (1)

An internship providing pedagogical experience in undergraduate music theory (written and aural). Internship is conducted under the supervision of a faculty member who is teaching an undergraduate music theory course (MUS 170, 171, 172, 173, 270, 271, 272, or 273). May be repeated to a maximum of four credits.

MUS 676 ADVANCED ANALYTICAL TECHNIQUES. (3)

Study of the most significant approaches to music analysis of the 20th century, including Schenkerian analysis, Forte set theory, and others. Prereq: MUS 578 or equivalent.

MUS 678 HISTORY OF THEORY. (3)

A survey of theoretical ideas from the Greeks through 19th century English and German theorists. Prereq: MUS 578 or equivalent.

MUS 680 BAND HISTORY AND LITERATURE. (3)

A study of the heritage of the wind band through its leaders and literature, from its earliest roots to the present, with emphasis on the period from 1950 to the present. Prereq: Consent of instructor.

MUS 681 ADVANCED REHEARSAL TECHNIQUES—BAND. (3)

The development of effective rehearsal skills in the secondary school and university band settings, with emphasis on performance orientation, the development of aural concepts and advanced rehearsal analysis and techniques. Prereq: MUS 365, teaching experience or permission of instructor.

MUS 684 ADVANCED STRING METHODS AND MATERIALS. (3)

The study of string pedagogy through historical perspectives as it relates to the individual instruments as well as to class instruction. Prereq: Graduate standing in music or approval of instructor.

MUS 690 TOPICS IN MUSICOLOGY (Subtitle required). (3)

Investigation of critical and historical problems in musicology; intensive study of a specific composer, genre, or school of composers. May be repeated to a maximum of six credits when identified by different course subtitles. Prereq: Graduate standing and consent of instructor.

MUS 693 WORLD MUSIC FOR TEACHERS. (3)

This course provides a comprehensive survey of world music for teachers, an introduction to theories and methodologies of ethnomusicology and preparation for developing a more in-depth knowledge of a given musical region. Prereq: Graduate standing or consent of instructor.

MUS 694 INTERNSHIP IN SACRED MUSIC. (1)

An internship to provide students in the Master of Music in Sacred Music program with a practical field experience in a sacred setting. The internship is identified and conducted under the supervision of a UK School of Music faculty supervisor and on-site coordinator. Students must file a Learning Contract with the School of Music DGS. May be repeated to a maximum of three credits. Prereq: Completion of 12 hours in the M.M. in Sacred Music program or by consent of instructor.

MUS 695 INDEPENDENT WORK IN MUSIC. (1-3)

The study and transcription of an individually selected topic relevant to a student's academic development. For work in musicology, theory, music education, or vocal literature, students should enroll in the designated independent work courses listed separately. May be repeated to a maximum of six credits. Prereq: Graduate standing in music and consent of instructor.

MUS 700 MEDIEVAL AND RENAISSANCE NOTATION. (3)

The study and transcription of the notation of medieval and Renaissance polyphony, and of the various keyboard and lute tablatures of the 16th and 17th centuries. Prereq: Consent of instructor.

MUS 702 SEMINAR IN MUSICOLOGY. (3)

Study and research in specific musicological problems. May be repeated to a maximum of eighteen hours. Prereq: Consent of instructor.

MUS 703 PROSEMINAR IN MUSICOLOGICAL METHODS. (3)

An introductory exploration into the methodologies currently utilized in the field of musicology. Prereq: Consent of instructor.

MUS 705 RESEARCH II. (3)

A course designed to lead the student in music education to do experimental research in the area of music education. Prereq: MUS 600.

MUS 706 MUSIC LEARNING AND BEHAVIOR. (3)

This course is intended for graduate students in music education with the major focus of the class involved in learning behavioral principles, learning observational categories pertaining to classroom reinforcement and role playing and practicing techniques to be employed later in the classroom. Prereq: Graduate standing in music.

MUS 707 TESTS AND MEASUREMENTS IN MUSIC. (3)

This course is designed to provide students with knowledge in measurements and evaluation in the field of music education and research. Topics include principles of measurement, administration and evaluation of published standardized and teacher-made tests, interpretation of test results, and test construction. Prereq: MUS 600.

MUS 710 INTRODUCTION TO ETHNOMUSICOLOGY. (3)

An introduction to the materials and methodologies of the field of ethnomusicology. Prereq: Graduate standing in music.

MUS 711 SEMINAR IN ETHNOMUSICOLOGY (Subtitle required). (3)

Intensive research-based study of specific problems and topics in ethnomusicology. May be repeated under a different subtitle to a maximum of twelve credits. Prereq: Graduate standing in music.

MUS 719 INDEPENDENT WORK IN MUSICOLOGY. (1-3)

May be repeated to a maximum of six hours. Prereq: Four to six hours of graduate credit in the area of specialization and consent of instructor.

MUS 730 INDEPENDENT WORK IN MUSIC THERAPY. (1-3)

This course is directed toward developing individualized advanced competencies in music therapy in one of the following areas: Music Therapy Theory, Research, Musical Development and Personal Growth, and Clinical Administration. Prereq: Permission of instructor.

MUS 731 MUSIC PERCEPTION AND COGNITION. (3)

This course is designed for doctoral students with a concentration in music education and will cover the physiological, sensory, and organizational processes involved in music perception and cognition. It is also directed toward developing advanced competencies in understanding how music can be used to treat neurological disorders and stroke. Prereq: Permission of instructor.

MUS 732 SEMINAR: TOPICS IN MUSIC THERAPY. (3)

This course is directed toward developing advanced competencies in various topics in and related to music therapy. Topics will include supervision, leadership skills, research, current theories of practice and clinical administration. Prereq: Permission of instructor.

MUS 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

MUS 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

MUS 750 INDEPENDENT WORK IN MUSIC EDUCATION. (1-3)

May be repeated to a maximum of six hours. Prereq: Four to six hours of graduate credit in area of specialization and consent of instructor.

MUS 760 MUSIC RESEARCH III. (3)

This course is directed toward developing advanced competencies in research methods common to the fields of music education and music therapy. MUS 760 will build upon and expand the foundations established in MUS 600 and MUS 705, covering topics such as mixed methods research, integrative or advanced statistical analyses, and social/behavioral science designs and medical research designs. Supervised research projects will be a large component of this course and projects will be individualized based on students' educational track and career goals. Prereq: MUS 600 Research I and MUS 705 Research II and permission of instructor.

MUS 762 MUSIC IN HIGHER EDUCATION. (3)

Historical and comparative studies in the teaching and administration of music in colleges and universities. Includes case studies in administration, music in European higher education and the relationship of music to all other elements of the academic program. Prereq: MUS 751.

MUS 766 SEMINAR IN MUSIC EDUCATION. (3)

Advanced professional study in the theory and practice of music education. May be repeated to a maximum of six credits. Prereq: Consent of instructor.

MUS 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

MUS 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

MUS 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

MUS 770 PSYCHOLOGY OF MUSIC. (3)

A study of the processes of musical thinking and the effects of music on human behavior.

MUS 772 SEMINAR IN THEORY. (3)

Individual and group study of theoretical problems and areas of inquiry. May be repeated to a maximum of nine credits. Prereq: Graduate standing in Theory, or consent of instructor.

MUS 780 DIRECTED RESEARCH IN VOCAL LITERATURE. (1-3)

Individual directed research. Elective course for master's degree students. Required for doctoral voice majors; topics assigned at discretion of instructor in proportion to credits undertaken. May be repeated to a maximum of 12 credits. Prereq: MUS 618 and MUS 620 or permission of instructor.

MUS 799 INDEPENDENT WORK IN MUSIC THEORY. (1-3)

May be repeated to a maximum of six hours. Prereq: Four to six hours of credit in area of specialization and consent of instructor.

NEU Neurology**NEU 815 FIRST-YEAR ELECTIVE, NEUROLOGY. (1-3)**

With the advice and approval of his or her faculty adviser, the first-year student may choose approved electives offered by the Department of Neurology. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the first-year curriculum. Pass-fail only. Prereq: Admission to first year, College of Medicine.

NEU 825 SECOND-YEAR ELECTIVE, NEUROLOGY. (1-4)

With the advice and approval of his or her adviser, the second-year student may choose approved electives offered by the Department of Neurology. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the second-year curriculum. Pass-fail only. Prereq: Admission to second-year medical curriculum and approval of adviser.

NEU 850-899 FOURTH-YEAR ELECTIVE FOR MEDICAL STUDENTS. (1-6)

With the advice and approval of the faculty adviser and the Student Progress and Promotions Committee, the fourth-year student may choose approved electives offered by the various departments in the College of Medicine. The intent is to provide the student an opportunity to develop his fund of knowledge and clinical competence. Prereq: Admission to the fourth-year College of Medicine and/or permission of the Student Progress and Promotions Committee.

Approved electives:

NEU 850 ACTING INTERNSHIP IN NEUROLOGY

NEU 851 CHILD NEUROLOGY INDEPTH

NEU 852 RESEARCH IN NEUROLOGY

NEU 853 NEUROLOGY CONSULTATION

NEU 854 CLINICAL NEUROPHYSIOLOGY (EEG, EMG, ANDEVOKED POTENTIALS)

NRE Natural Resources and Environmental Science**NRE 201 NATURAL RESOURCES AND ENVIRONMENTAL SCIENCE. (3)**

An introductory course in management of natural resources as supported by environmental science at an ecosystem level. Students will write a range of papers about natural resource issues. An overnight field trip is required. Prereq: CIS/WRD 111 or equivalent (ENG 101, ENG 102, and COM class) and sophomore standing.

NRE 320 NATURAL RESOURCE AND ENVIRONMENTAL ANALYSIS. (3)

A field-oriented course taught off campus as a three-week summer camp in August. Emphasis is placed on methodologies for field data collection necessary to evaluate a variety of natural resources on forest, agricultural, and surface mined lands. Students will become familiar with sampling instrumentation, collection, preservation, analysis and data interpretation. Lecture, 10 hours; laboratory, 30 hours per week (Monday-Friday) for three weeks. Prereq: BIO 150/152 and CHE 105.

NRE 355 INTRODUCTORY GEOSPATIAL APPLICATIONS FOR LAND ANALYSIS. (3)

An introduction to the concepts and methods of compilation, management, analysis, and display of spatially-referenced and tabular data utilizing vector and raster data models. Lecture will be complemented with computer based laboratory exercises. Lecture, two hours; laboratory, four hours per week. Prereq: Third year and above LA major, junior/senior NRES major, or permission of instructor. (Same as LA 355.)

NRE 381 NATURAL RESOURCE AND ENVIRONMENTAL POLICY ANALYSIS. (3)

This course examines the historical development of natural resource and environmental policies, provides an overview of the policy process and key federal agencies which manage natural resources or implement environmental regulations, and introduces basic policy analysis techniques so students can prepare and present a case-specific analysis of existing resource or environmental policy.

NRE 390 SPECIAL TOPICS IN NATURAL RESOURCES AND ENVIRONMENTAL SCIENCE. (1-3)

This course focuses on unique and timely topics in natural resources and environmental science. May be repeated under a different subtitle for a maximum of six credits. Prereq: NRE 301 or consent of instructor.

NRE 395 INDEPENDENT STUDY IN NATURAL RESOURCES AND ENVIRONMENTAL SCIENCE. (3)

Study and independent work on selected problems related to natural resources and environmental science conducted under the supervision of a faculty member and with clear relevance to the student's Environmental Systems Emphasis Area. The goal of NRE 395 is for students interested in research to have an authentic research experience, working directly with a faculty member or graduate student in data collection and analysis, as well as conducting a portion of the research independently. Prereq: Consent of appropriate faculty and a plan of learning objectives approved by the NRCM Internship Coordinator. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

NRE 399 EXPERIENTIAL EDUCATION IN NATURAL RESOURCES AND ENVIRONMENTAL SCIENCE. (3)

A learning experience in natural resources and environmental sciences conducted under the supervision of a faculty member and with clear relevance to the student's Environmental Systems Emphasis Area. The goal of this requirement is to provide the student with pre-professional experiential learning experience in their chosen emphasis area within natural resources and environmental science. Prereq: Consent of appropriate faculty and approval by NRCM Internship Coordinator. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

NRE 420G TAXONOMY OF VASCULAR PLANTS. (4)

A survey of the evolutionary relationships among the major of vascular plant groups, concentrating heavily on important families flowering plants. Issues in contemporary systematics, including cladistic methods, will be covered. Students will gain practical experience learning the language of descriptive botany and using botanical keys in technical manuals for species identification. Field trips highlight the local spring flora. Lecture, three hours; laboratory, three hours; plus two Saturday field trips. Prereq: Junior standing; BIO 148 and BIO 152 or one course in introductory botany or consent of instructor. (Same as BIO 420G.)

NRE 450G BIOGEOCHEMISTRY. (3)

A lecture and lab course emphasizing the role of microbial processes on elemental and pollutant cycling in terrestrial soils and aquatic sediments. Soils and sediments from different ecosystems are evaluated for microbial community composition and biogeochemical cycling of organic and inorganic nutrients and pollutants using advanced molecular and laboratory techniques. Several all day field trips and laboratory exercises required. Limited to eight students at the senior or higher level standing. Prereq: CHE 105, 107, 111, 113. (Same as PLS 450G.)

NRE 455G WETLAND DELINEATION. (3)

Basic concepts of natural wetland ecosystems, their importance, functions, and major features used for their identification and classification. Application of basic hydrology, hydrophytic vegetation and hydric soil indicators for identification of jurisdictional wetlands utilizing documentation and analysis of field collected data. Three laboratory exercises and four short field trips required. Prereq: PLS 366 or consent of instructor. (Same as PLS 455G.)

NRE 470G SOIL NUTRIENT MANAGEMENT. (3)

Soil reaction/cycling of elements essential for plant growth; rates, timing and placement of nutrient sources in modern crop/soil management systems; plant and soil sampling and analysis to diagnose plant nutrient stress. Prereq: CHE 105, PLS 366 and PLS 386 or consent of instructor. (Same as PLS 470G.)

NRE 471 SENIOR PROBLEM IN NATURAL RESOURCES AND ENVIRONMENTAL SCIENCE. (4)

This course is designed to provide students with the opportunity to apply the skills and information acquired in previous courses to a real world problem in natural resources and environmental science. The class will focus on a single current issue in Kentucky and will research that issue in depth, using a variety of techniques, including library research, interviews, and data collection and analysis. In addition to research and problem-solving skills, written and oral skills will be emphasized. Lecture, three hours; laboratory, two hours per week. Prereq: NRE 201, NRE 320, FOR 340, PLS 366, NRE 381, FOR 460/EES 385 (or concurrent enrollment), NRE 355 (or concurrent enrollment), and senior standing.

NRE 545 RESOURCE AND ENVIRONMENTAL ECONOMICS. (3)

This is an advanced level course focused on economic analysis. It will help students frame natural resource and environmental problems so that they can be analyzed and solved. Major topic areas include water resources, fisheries, energy (and other non-renewable resources), agriculture, and pollution. Policy instruments such as pricing, emission fees, and tradable permits will be covered in detail. Prereq: AEC 303 or AEC 445G or consent of instructor. (Same as AEC 545.)

NRE 556 CONTEMPORARY GEOSPATIAL APPLICATIONS FOR LAND ANALYSIS. (3)

Advance concepts in data base analysis, model development, and ancillary functions in geographic information systems. Lecture, two hours; laboratory, four hours per week. Prereq: LA 355/NRE 355 and permission of instructor. (Same as LA 556.)

NS Nutritional Sciences

NS 601 INTEGRATED NUTRITIONAL SCIENCES I. (3)

The material covered in CNU/NS 601 consists of three major emphasis areas: (1) review of carbohydrate, lipid, and protein structure, synthesis, absorption, and metabolism, (2) the impact of nutritional influences on macronutrient metabolism to health and disease, (3) the influence of macronutrient metabolism on the regulation of energy balance. Prereq: IBS 601, PGY 206. (Same as CNU 601.)

NS 602 INTEGRATED NUTRITIONAL SCIENCES II. (3)

Integrated study of the properties, metabolism, biochemical and physiological functions and interactions of vitamins and minerals, and their relationships to chronic diseases, deficiency symptoms and toxicity. Prereq: IBS 601, PGY 206. (Same as ASC/CNU 602.)

NS 603 INTEGRATED NUTRITIONAL SCIENCES III. (2)

This course is aimed at providing medical and health professional students with a working knowledge of dietary requirements and guidelines, nutritional assessment and nutritional requirements, food safety issues and nutritional needs throughout the lifecycle. Prereq: Health Professional Graduate Status. (Same as CNU/FSC 603.)

NS 605 WELLNESS AND SPORTS NUTRITION. (3)

Emphasis is directed toward nutrition as applied to prevention of disease through lifestyle management and the application of nutrition in exercise and sport. Targeted focus areas are: body composition and energy expenditure, the metabolic basis of weight management, nutrient needs throughout the lifecycle, the metabolic changes associated with obesity, behavioral management of obesity, nutrient metabolism and exercise, water and electrolyte balance during exercise, nutritional ergogenic aids, nutrition-strength and performance enhancement. Prereq: PGY 412G, and BCH 401G or equivalent or consent of instructor. (Same as CNU/PT 605.)

NS 606 MOLECULAR BIOLOGY APPLICATIONS IN NUTRITION. (2)

Focus will be on the use of the most recently developed techniques and model systems in molecular biology for studying nutrient regulation of gene expression. Examples include current problems in nutrition such as models for engineering plants containing more desirable nutrient sources (fats); for studying effects of various nutrients in transgenic mice on tumor suppressor genes and oncogene expression, that are important in cancer prevention; and for studying nutrient effects on genes that modulate obesity. Prereq: BCH 501 and 502 or equivalent; or BCH 401G and consent of instructor. (Same as CNU 606.)

NS 608 NUTRITIONAL IMMUNOLOGY. (3)

Theories and mechanisms of immunity will be introduced. The effects of nutrition on immunity will be discussed from experimental and clinical perspectives. A lecture and problem-based learning approach with incorporation of student presentations, three hours per week. Prereq: PGY 412G and CNU 601, or consent of instructor. (Same as CNU 608.)

NS 609 ETHICS IN CLINICAL SCIENCES RESEARCH. (1)

Students will examine ethical issues in biomedical research using a case-study approach. Representative issues addressed may include data selection and retention, plagiarism, scientific review of grants and manuscripts, scientific misconduct, and informed consent. Prereq: Graduate student status. (Same as CNU 609.)

NS 623 PROFESSIONAL DEVELOPMENT FOR SCIENTISTS IN TRAINING. (3)

The purpose of this course is to introduce graduate students to useful topics in their quest to attain and retain a tenure track researcher position (or equivalent) at some point in their scientific future. These subjects are not always taught by mentors or through a traditional curriculum, but they are of utmost importance in a successful career. A breadth of issues will be presented that many principal investigators would say they wished they learned in graduate school and should give students the resources to become competitive scientific professionals. (Same as PHA 623.)

NS 640 HUMAN NUTRITION: ASSESSMENT. (3)

Assessment of dietary, anthropometric and biochemical parameters of nutritional status in health and disease. Lecture, two hours; laboratory, three hours per week. Prereq: NFS 510, NFS 511 or equivalent. (Same as NFS 640.)

NS 701 NUTRITION AND CHRONIC DISEASES. (4)

Selected topics in nutritional sciences as related to health and chronic diseases, e.g., gastrointestinal disease, cancer, AIDS, diabetes, cardiovascular disease, obesity, including drug-nutrient interactions. Prereq or concur: NS/CNU 601, NS/ASC 602. (Same as CNU 701.)

NS 702 CLINICAL/WELLNESS NUTRITION PROBLEM-BASED CASE STUDIES. (1-3)

A problem-based learning approach to case studies is integrated with a traditional didactic approach to offer options in therapeutic nutrition, and/or health promotion. Efforts are directed toward patient, worksite and laboratory data interpretation as well as patient education. Students are directed to develop independent critical thinking related to class presentations including case studies regarding rotations through various medical or health services e.g. surgery, pediatrics, nutrition support and health promotion. Prereq: NS/CNU 601, NS/ASC 602, NS/CNU 701, NS/NFS 610 and graduate status or consent of instructor. (Same as CNU 702.)

NS 704 CURRENT TOPICS IN NUTRITIONAL SCIENCES. (1)

This course is designed to develop the student's independent thinking and critical analysis related to various nutritional sciences issues. These skills will be developed through reading assignments and group discussion related to current topics in nutrition. Prereq: Consent of instructor. (Same as CNU/NFS 704.)

NS 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed. (Same as NFS 748.)

NS 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

NS 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

NS 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours. (Same as NFS 768.)

NS 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

NS 771 GRADUATE SEMINAR IN NUTRITIONAL SCIENCES. (0-1)

Reports and discussion on recent research and current literature in nutritional sciences. May be repeated to a maximum of eight credits. Prereq: Graduate standing and consent of instructor for non-NS students enrolled for one credit.

NS 782 SPECIAL PROBLEMS. (1-6)

Independent advanced work on a special problem in nutritional sciences. Prereq: Consent of graduate advisor. (Same as CNU/NFS 782.)

NS 790 RESEARCH IN NUTRITIONAL SCIENCES. (0-6)

Research work involving original investigation. May be repeated to a maximum of 18 credits. Prereq: Consent of graduate advisor. (Same as CNU/NFS 790.)

NSG Neurosurgery

NSG 864 ACTING INTERNSHIP IN NEUROSURGERY. (4)

These are surgical acting internship rotations and students will fulfill the general objectives as given, in addition to the more specific goals and objectives for all AIs as outlined in the AI syllabus. Prereq: Promoted without reservation from third to fourth year. Approval of faculty advisor. Approval of course coordinator.

NUR Nursing

NUR 101 ACADEMIC ORIENTATION AND INTRODUCTION TO NURSING. (1)

Designed to help pre-nursing freshmen make the transition to college and understand while exploring nursing as an educational system and a profession. Lectures, discussions, exercises and out of class assignments will introduce the students to the University's expectations of its students, the history and mission and traditions. Attention will also be given to honing academic skills. Prereq: Pre-Nursing Majors only.

NUR 200 FOUNDATIONS FOR PROFESSIONAL NURSING. (2)

This course will enable nursing students to develop skills for student success. Students will discover nursing as a profession in historical and emerging contexts of today's interprofessional health care delivery system. Students will begin to develop professional behaviors to promote high quality and safe patient-centered care in an interprofessional healthcare environment. Prereq: Admission to the professional Nursing program. Co-req: NUR 201. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

NUR 201 ASSESSMENT AND HEALTH PROMOTION ACROSS THE LIFESPAN. (8)

This course introduces the baccalaureate student to the concepts of health and physical assessment, health promotion, and therapeutic communication skills as they are applied with diverse populations in a variety of clinical settings. In addition, students will develop critical thinking skills useful to the nurse in promoting health in individuals and families across the life span. Lecture, five hours; laboratory nine hours per week. Prereq: Admission to the professional Nursing program, completion of Certified Nurse Assistant Program, current certification in Basic Life Support for Healthcare Providers (CPR and AED) for infant, child and adult, current TB screening and required immunizations, completion of HIPPA. Coreq: NUR 200.

NUR 210 PATHOPHARMACOLOGY I. (3)

This course is the first of a two semester course sequence that addresses pathophysiological and pharmacologic concepts basic to nursing practice. Prereq: NUR 201, BIO 208, NFS 212 with minimum grade of C in each. Coreq: NUR 211 or NUR 221.

NUR 211 FUNDAMENTALS OF ADULT NURSING CARE. (7)

The course will provide didactic and clinical experiences that enable the students to provide beginning professional nursing care with adults requiring intervention. Students will use the key concepts of safety, patient-centered care, nursing process, teaching-learning, and physical and psychosocial assessment in the care of adults with basic alterations in ability to meet human needs. Content related to providing a safe care environment, such as administering and monitoring medications, aseptic technique, and psychomotor skills will be addressed. Prereq: NUR 200, NUR 201, BIO 208, DHN 212 with grade of C or higher.

NUR 221 INTRODUCTION TO PROFESSIONAL NURSING CARE ACROSS THE LIFESPAN FOR SECOND DEGREE STUDENTS. (8)

This course introduces the baccalaureate student to the concepts of health and physical assessment, growth and development, health promotion and therapeutic communication skills as they are applied with diverse populations in a variety of clinical settings. The course will provide didactic and clinical experiences that enable the students to provide beginning professional nursing care with individuals and families requiring interventions across the lifespan. Students will use the key concepts of nursing process, teaching-learning, and physical and psychosocial assessment in the care of people with basic alterations in ability to meet human needs. Content related to providing a safe care environment, such as administering and monitoring medications and aseptic technique will be addressed. In addition, students will develop critical thinking skills useful to the nurse in promoting health in individuals and families across the lifespan. Prereq: Admission to the College of Nursing Second Degree Option; NFS 212, BIO 208 with a grade of C or higher; completion of Certified Nurse Assistant Program, current certification in Basic Life Support for Healthcare Providers (CPR and AED) for infant, child and adult, current TB screening and required immunizations, completion of HIPPA.

NUR 300 PATHOPHARMACOLOGY II. (3)

This course is the second of a two semester course sequence that addresses pathophysiological and pharmacologic concepts basic to nursing practice. Prereq: NUR 211 or NUR 221, and NUR 210 with a minimum grade of C in each. Coreq: NUR 301 or consent of instructor.

NUR 301 FAMILY CENTERED CARE OF ADULTS WITH COMMON HEALTH PROBLEMS. (6)

This course will provide classroom, clinical and lab experiences to enable the student to provide patient-centered and family-centered nursing care for adult populations with common health problems across settings. Critical thinking, problem-solving, clinical reasoning, evidence-based practice and ethical considerations are threaded throughout the course. Emphasis will be placed on providing quality and safe nursing care that contributes to optimal patient outcomes. Lecture, 3 hours; clinic, 9 hours per week. Prereq: Junior year standing in nursing, NUR 201 and NUR 211 or NUR 221, NUR 210 with a minimum grade of C in each course; current certification in Basic Life Support for Healthcare Providers (CPR and AED) for infant, child and adult, current TB screening and required immunizations. Coreq: NUR 300.

NUR 310 RESEARCH FOR EVIDENCE-BASED NURSING PRACTICE. (3)

This course provides an introduction to the research methodology essential to providing evidence-based nursing care. Students will acquire the fundamental basics in quantitative and

qualitative nursing research. Legal and ethical issues are discussed. The students will also develop the knowledge and skills necessary to appraise research and apply to evidence-based nursing practice, including up-to-date electronic resources. Students learn to apply this knowledge through evidence-based practice processes. Students will then communicate an evidence-based project to their peers. Prereq: STA 210 or BST 330, or consent of instructor. RN-BSN Prereq: NUR 350, STA 210 or BST 330 or equivalent, or consent of instructor. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

NUR 311 NURSING CARE OF CHILDREARING FAMILIES. (5)

This course is designed to provide classroom and clinical experiences to enable the student to provide continuity of nursing care for families when children and adolescents experience a variety of health problems. Lecture, two hours; laboratory, 6 hours per week. Prereq: NUR 871, current certification in Basic Life Support for Healthcare Providers (CPR and AED) for infant, child and adult, current TB screening and required immunizations. Coreq: NUR 313.

NUR 313 NURSING CARE OF CHILDBEARING FAMILIES. (5)

This course is designed to provide classroom and clinical experiences to enable the student to provide continuity of nursing care for families during uncomplicated pregnancy, labor and delivery, postpartum, and neonatal periods. Lecture 3 credits, clinical 2 credits (6 hours per week). Prereq: NUR 871, current certification in Basic Life Support for Healthcare Providers (CPR and AED) for infant, child and adult, current TB screening and required immunizations. Coreq: NUR 311.

NUR 350 CONCEPTS IN PROFESSIONAL NURSING. (5)

This course will provide students with an opportunity to explore and understand theories from other disciplines/professions and to apply these theories in nursing practice. Student learning will be facilitated with the use of case studies, scholarly journal articles, peer review of classmates' writing, and informatics. Additionally this course will focus on client education that encompasses the assessment of the learner and consideration of the learner's needs in various health care situations. The student will learn how to develop a teaching plan and will demonstrate effective teaching strategies. Students will expand their knowledge of cultural diversity and evidence-based practice to promote quality and safe, patient-centered care. This course is taught in an online format. Students must be active, self-directed learners to be successful in this class. Students will practice skills of critical thinking and writing within the discipline. Prereq: Admission to College of Nursing RN-BSN option. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

NUR 351 HEALTH ASSESSMENT. (2)

This health assessment course offers essential assessment and skill development opportunities for nursing. It includes intensive work on the principles and techniques of performing a health assessment in the context of developmental, physiological, psychological, and environmental parameters. Individual and family models will be analyzed and utilized for use with diverse populations; case studies will be used to analyze family assessment models. Clinical emphasis will be placed on the assessment of individual clients. Prereq: Admission to College of Nursing RN-BSN option.

NUR 352 PHARMACOLOGY. (3)

This is a general introductory course to drugs and drug therapy. Various drugs will be studied and categorized in the context of clinical pathological disorders or problems. The general approach will involve a review of the pathophysiology of specific disorders and the categories of drugs currently employed in the treatment of these problems. The students will learn mechanism of action, therapeutic effect, side effects, drug interactions, and toxicities of these drugs, and will be provided with examples of commonly used drugs in each category of drugs discussed. RN-BSN prereq or coreq: NUR 364.

NUR 354 PATHOPHYSIOLOGY. (3)

This course addresses pathophysiological concepts basic to nursing practice. Concepts essential for understanding major health problems which occur across the life span and that are encountered in multiple care settings are discussed. Emphasis is on understanding how and why various pathophysiologic signs and symptoms occur. RN-BSN coreq: NUR 352.

NUR 380 ENERGY HEALING LAB. (1)

This course is designed to introduce students to the use of self as a healing force and to a variety of biofield energy healing techniques from the modalities of Therapeutic Touch, Reiki, Pranic Healing, Healing Touch, Bowen Therapy, Polarity Therapy, and from the work of Rosalyn Bruyere. The format of this course will be a controlled, laboratory setting for the demonstration and practice of these techniques; students will practice the techniques on each other and on volunteers from the community. Research involving these techniques will be read and discussed and faculty will share clinical experiences in the use of these techniques. Prereq: Admission to the College of Nursing or consent of instructor.

NUR 381 NURSING PRACTICE INTERNSHIP. (1)

This seminar is designed to enhance the nursing knowledge gained throughout the nursing curriculum. Students will study major nursing concepts in-depth, roles of the professional nurse and apply them to their clinical practice experiences. Prereq: NUR 210 and NUR 211 or NUR 221.

NUR 382 SPECIAL TOPICS IN NURSING. (1-3)

Study and analysis of current and topical problems and issues in nursing. Directed by a faculty member with expertise in the topic under study. May be repeated to a maximum of 18 credits.

NUR 384 INTRODUCTION TO PERIOPERATIVE NURSING. (1)

This course will introduce the student to the perioperative nursing process. Students will learn basic information about planning patient care for all three perioperative phases – preoperative, intraoperative, and postoperative. Class will meet for 4 hours (1 hour didactic; 3 hours lab) every other week for 8 weeks. Prereq: NUR 301.

NUR 386 EMERGENCY NURSING ELECTIVE. (1)

The course emphasizes critical thinking, planning, implementation and evaluation in the nursing management of patients requiring emergent trauma care. This course provides a foundation of trauma nursing and focuses on application of scientific process to needs of trauma patients. Prereq: Successful completion of NUR 300 and 301 or licensed RN or permission of instructor.

#NUR 390 DEANS' INTERPROFESSIONAL HONORS COLLOQUIUM. (1)

This course provides health professions students with an interactive, seminar-based forum within which to explore the characteristics and implications of collaborative interprofessional practice around a contemporary health care issue with interprofessional implications. Eligible students are recommended by their respective college deans and admitted by application from the colleges of the Medical Center, the Clinical Pastoral Education Program within UK HealthCare as well as students from other programs that are engaged in or support collaborative interprofessional practice (e.g., Counseling Psychology, Kinesiology). Additionally, students from other colleges/majors may apply, with dean's recommendation, from programs approved for participation by the Dean's Interprofessional Honors Colloquium. Prereq: Nomination or approval of selection eligibility by the Dean of the College of Nursing; good academic standing in professional nursing program at the junior or senior level.

NUR 391 NURSING RESEARCH INTERNSHIP. (1-3)

This nursing research internship is an independent study elective designed to provide students with experience in conducting nursing research. Students will work with a nursing research faculty mentor on a research project. Prereq: Admission to the professional nursing program.

NUR 393 NURSING RESEARCH INTERNSHIP. (1-3)

This nursing research internship is an independent study elective designed to provide students with experience in conducting nursing research. Students will work with a nursing research faculty mentor on a research project. Prereq: Admission to the professional nursing program.

NUR 395 ELECTIVE STUDY IN NURSING. (1-4)

An independent study project investigating an area of interest under the guidance of faculty. May encompass library study or patient care utilizing aspects of scientific approach. May be repeated to a maximum of four credits.

NUR 397 NURSING SKILLS LAB INTERNS. (1-3)

This nursing skills laboratory internship is an independent study elective designed to provide students with experience in implementing the teaching learning process. Students will work with nursing skills laboratory instructors as mentors as they assist beginning nursing students in learning clinical nursing and med math skills. Prereq: NUR 211 or NUR 221.

NUR 399 STUDENT NURSE ACADEMIC PRACTICUM. (3)

A 10 week clinical practicum (summer only) that allows student nurses to apply in clinical setting what they have learned to date. Emphasis will be placed on critical thinking, management of responsibilities, and professionalism in the clinical setting. Prereq: Currently enrolled in an accredited school of nursing, within 2 semesters of graduation with either BSN or ADN. Cumulative GPA of 2.75 and GPA of 2.75 in all NUR courses; current certification in Basic Life Support for Healthcare Providers (CPR and AED) for infant, child and adult, current TB screening and required immunizations. Students must meet the employment requirements of UK HealthCare Enterprise.

NUR 400 LEADERSHIP/MANAGEMENT IN NURSING CARE DELIVERY. (3)

This course is designed to advance the student's ability to use leadership and management theory in nursing practice within current and emerging organizational systems. The professional nurse's role in management of care will be examined. Responsibilities for resource management and management of legal and ethical dilemmas in various organizational systems also will be addressed. Prereq: HSM 241, NUR 300, NUR 310, NUR 311 and NUR 313 with a minimum grade of C in each, or consent of instructor. RN-BSN prereq: NUR 350.

NUR 401 PSYCHIATRIC-MENTAL HEALTH NURSING. (5)

This course is designed to develop students' skill in the use of psychiatric/mental health concepts to provide nursing care to clients across the lifespan and in a variety of settings. Lecture, three hours; clinic, six hours per week. Prereq: HSM 241, NUR 300, NUR 310, NUR 311, NUR 313 with a minimum grade of C in each; and current certification in Basic Life Support for Healthcare Providers (CPR and AED) for infant, child and adult, current TB screening and required immunizations. Coreq: NUR 403.

NUR 403 PUBLIC HEALTH NURSING. (5)

This course is designed to develop students' skills in applying health promotion and disease prevention frameworks and in using epidemiological and public health concepts to deliver nursing care with diverse populations in a variety of settings. Emphasis will be placed on the effect of changing health care delivery systems on nursing practice. Lecture, three hours; clinic, six hours per week. Prereq: NUR 300, NUR 310, NUR 311, NUR 313, HSM 241 with a minimum grade of C in each, and current certification in Basic Life Support for Healthcare Providers (CPR and AED) for infant, child and adult, current TB screening and required immunizations. Coreq: NUR 401. RN-BSN prereq: NUR 350, NUR 310 or consent of instructor and current certification in Basic Life Support for Healthcare Providers (CPR and AED) for infant, child and adult, current TB screening and required immunizations.

NUR 410 CAREER MANAGEMENT IN NURSING. (2)

The course provides students with the skills for ongoing professional development and success in nursing. Prereq: NUR 400, NUR 401, NUR 403 or consent of instructor. Coreq: NUR 411, NUR 413.

NUR 411 HIGH ACUITY NURSING. (5)

The course emphasizes critical thinking and data analysis skills in the nursing management of patients with complex health problems with and unpredictable outcomes. Students will collaborate with other health care professionals to plan, implement, and evaluate family-centered nursing care across the lifespan in high-acuity settings. Lecture, four hours; clinic, three hours per week. Prereq: All University and College of Nursing course requirements except NUR 410, NUR 411, and NUR 413, current certification in Basic Life Support for Healthcare Providers (CPR and AED) for infant, child and adult, current TB screening and required immunizations. Coreq: NUR 410 and NUR 413 seminars.

NUR 413 SYNTHESIS OF CLINICAL KNOWLEDGE FOR NURSING PRACTICE. (6)

This course was designed to provide opportunity to develop independence and competence in applying principles of care management and leadership to nursing practice in a variety of clinical settings. Lecture, one hour; clinic, 15 hours per week. Graded pass/fail. Prereq: All other courses in the curriculum, current certification in Basic Life Support for Healthcare Providers (CPR and AED) for infant, child and adult, current TB screening and required immunizations. Completion of NUR 413 seminars and NUR 411 before beginning the clinical component of NUR 413. Coreq: NUR 410 and NUR 411 for the first half of the semester. RN-BSN prereq: All other courses in the RN-BSN curriculum, current certification in Basic Life Support for Healthcare Providers (CPR and AED) for infant, child and adult, current TB screening and required immunizations. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

#NUR 450 THE IMPACT OF EVIDENCE-BASED PRACTICE IN NURSING. (3)

Registered nurses should not enroll in NUR 310: Evidence-based research for nursing practice; registered nurses should enroll in NUR 450. This course provides an introduction to the research methodology essential to providing evidence-based nursing care. Students who are registered nurses will acquire the fundamental basics in quantitative and qualitative nursing research. Legal and ethical issues are discussed. The students will also develop the knowledge and skills necessary to appraise research and apply evidence-based nursing practice. Information technology will be incorporated throughout the course. Students learn to apply this knowledge through evidence-based practice processes. Students will then communicate an evidence based practice project to their peers. Prereq: Admission to the RN-BSN Option. STA 210 is pre-or co-requisite.

NUR 451 POPULATION HEALTH FOR REGISTERED NURSES. (5)

Registered nurses should not enroll in NUR 403 for public health nursing; registered nurses should enroll in NUR 451. Registered nurses enrolled in the RN-BSN option will develop public health nursing skills in this undergraduate distance learning nursing course. Students will apply principles of health promotion and disease prevention that are evidence-based while delivering population-centered care to diverse populations in a variety of settings. Emphasis will be placed on current local, national, and global health issues in the context of public health nursing practice that builds on current skill sets of the registered nurse (RN). Prereq: Admission to RN-BSN option.

NUR 452 LEADERSHIP AND MANAGEMENT FOR REGISTERED NURSES. (3)

Registered nurses should not enroll in NUR 400 Leadership/Management in Nursing Care Delivery; registered nurses should enroll in NUR 452. This course is designed to advance the RN student's ability to use leadership and management theory in nursing practice within current and emerging organizational systems and across the continuum from health, illness, and returning to health. Leadership responsibilities, strategies, and skills for facilitating a healthy work environment that provides optimum patient/family outcomes and the development and self-actualization of staff will be addressed. Prereq: Admission to the RN-BSN program.

NUR 453 NURSING PRACTICE CAPSTONE FOR REGISTERED NURSES. (6)

Registered nurses should not enroll in NUR 413 Synthesis of Clinical Knowledge for Nursing Practice; registered nurses should enroll in NUR 453. NUR 453 is a capstone graduation course designed for RN students working toward completion of the Bachelor of Science in Nursing degree. The course provides the opportunity to apply principles of patient safety, quality improvement, interprofessional teamwork, informatics, leadership, and evidence-based research to nursing practice in a variety of settings. Prereq: All other nursing courses in RN-BSN curriculum which include NUR 350, NUR 351, NUR 352, NUR 354, NUR 451, NUR 450, NUR 452 (NUR 450 and 452 are new course numbers also under review simultaneously).

NUR 511 END OF LIFE CARE IN THE ACUTE CARE SETTING. (3)

This course is designed to provide insight into the special needs of adult and pediatric patients in the acute care setting who are near the end of life. This course will cover pain and symptom management; ethical issues in palliative care nursing; cultural considerations in end-of-life care; communication, loss, grief, and bereavement; achievement of quality care at end-of-life; and preparation for and care at the time of death. Prereq: Admitted to Nursing Program or consent of instructor.

NUR 512 COMPLEMENTARY/ALTERNATIVE APPROACHES TO HEALTH CARE.**(3)**

Using a holistic approach to wellness, this course is an overview of alternative ways of conceptualizing health and illness. Non-traditional methods of managing illness and promoting health and well-being will be discussed. Practitioners of these methods will participate in discussions and involve students in experiencing some of these practices. Alternative methods that reflect use in a number of other cultures will be explored as complementary to the traditional western style of medicine which is used almost exclusively in this country. Prereq: Junior level. Consent of instructor for students outside the health professions.

NUR 520 SPECIAL TOPICS IN NURSING (Subtitle required).**(2-4)**

Exploration of selected topics or issues in nursing. Directed by a faculty member with expertise in the topic under study. Lecture, 0-4 hours; laboratory, 0-12 hours per week. May be repeated with different topics to a maximum of nine credits. Prereq: Variable, specified when topic identified.

NUR 540 HEALTH CARE SYSTEMS**FROM AN INTERPROFESSIONAL PERSPECTIVE.****(3)**

Health Care Systems from an Interprofessional Perspective provides a review and analysis of health care systems, the wellness-illness spectrum, and interprofessional collaborative practice. Areas of appraisal include the nature and functions of health services, agencies and professionals, and the impact of social, political, economic, regulatory, and technological forces on health care delivery and population outcomes. The course provides a unique opportunity for students to evaluate major health issues and related health care programs from an interprofessional and systems perspective. Working collaboratively with others, students will assess and plan evidence-based interventions that optimize health outcomes and improve quality of care and safety. Undergraduate prereq: This is a required course in the undergraduate nursing curriculum. Students must have completed NUR 211 or 221 with a minimum grade of C or receive approval to take NUR 540 from the faculty of record. Graduate prereq: There are no graduate prerequisites. This course may be taken as an elective course by graduate students.

NUR 601 THEORETICAL BASIS**FOR ADVANCED PRACTICE NURSING.****(2)**

Selected concepts and theories useful for guiding advanced practice nursing are examined. The concepts and theories are drawn from nursing science as well as from other disciplines. All are discussed within the context of the nature of nursing knowledge and the expanding scientific basis for advanced practice nursing. Prereq: Enrollment in graduate program in Nursing or consent of instructor.

NUR 602 RESEARCH METHODS**IN ADVANCED PRACTICE NURSING.****(3)**

This course provides the knowledge and skills essential for using research to support clinical and organizational decision-making. The strengths and limitations of various research designs and methods are reviewed for their utility in answering clinical questions, evaluating care delivery and patient outcomes, and making clinical decisions. Prereq: Graduate statistics course and NUR 924, admission to DNP program, graduate programs in nursing, or consent of instructor. (Same as NUR 925.)

NUR 603 CLINICAL REASONING**IN ADVANCED PRACTICE NURSING.****(3)**

The intent of this course is for students to enhance their abilities to think logically, use clinical evidence and research findings in making clinical decisions. Concepts and principles from the biopsychosocial sciences, clinical epidemiology, informatics, and ethics will be used in developing ways for defining problems; managing the health care of individuals, groups, and populations; and measuring and monitoring the outcomes of care. Strategies for organizing, managing, and using clinical data in decision making will be addressed. Prereq: MHA students admitted to Graduate Certificate in Nursing Studies; NUR 601 and 602 for students enrolled in graduate program in Nursing; or consent of instructor.

NUR 604 LEADERSHIP IN ADVANCED PRACTICE NURSING.**(3)**

This course focuses on leadership and management of health care delivery by advanced practice nurses. Emphasis will be placed on leading change related to improving health outcomes, especially in relation to those areas targeted by national health care objectives. Students will critically analyze theory and research from nursing and related sciences to understand social, cultural, economic, and political issues in the health care environment. Legislative and regulatory requirements related to the practice of advanced nursing will be appraised, with an emphasis on understanding how to promote the health of the public within appropriate legal boundaries and within the context of interdisciplinary practice. Students will use selected frameworks for evaluating organizational and public policies affecting health. Prereq: MHA students admitted to Graduate Certificate in Nursing Studies; NUR 603 for students admitted to graduate nursing program; or consent of instructor.

NUR 605 EVIDENCE-BASED NURSING PRACTICE.**(3)**

This course provides the opportunity to apply knowledge of the research process, research utilization and program evaluation models, or evidence-based practice to address a clinical problem. Under the guidance of a faculty advisor, students are expected to work with clinical staff to identify and address a clinical problem. A written scholarly report reflecting the process and outcomes of the activity is the final product. Prereq: NUR 602, enrollment in graduate program in Nursing or consent of instructor. Co-req: NUR 708, NUR 714, NUR 724, NUR 727, or NUR 734 (depending on student's specialty area.)

NUR 620 PROBLEMS IN CLINICAL NURSING.**(2-6)**

This course provides opportunity for the study of nursing problems in particular clinical areas and for the further development of techniques of nursing intervention. Ratio of discussion/

laboratory hours will vary according to designated clinical problems. May be repeated to a maximum of 12 credits. Prereq: Admission in graduate program in nursing or consent of instructor.

NUR 627 ISSUES IN RURAL NURSING AND HEALTH CARE DELIVERY.**(3)**

This course will focus on the exploration of models for providing preventive, primary health care, acute care, and chronic health care services in rural areas, including nursing care delivery models. Model standards for implementing the national health objectives in rural communities will be the primary focus. Demographic characteristics and organization of the community will be considered in assessing appropriateness and effectiveness of models for improving access to service and reducing disparity among subpopulations. Prereq: Enrollment in graduate program in nursing or consent of instructor.

NUR 631 APPLICATIONS**OF ADVANCED HEALTH ASSESSMENT.****(3)**

This advanced health assessment course offers comprehensive assessment of the individual within the context of the family and community. It includes comprehensive (systematic) history, physical, and psychological assessment of signs and symptoms, pathophysiological changes, and psychosocial variations of the individual patient. Assessments are performed within the context of developmental, physiological, psychological, cultural, and environmental parameters. Emphasis is placed on developing a thorough understanding of the individual patient and differentiating normal and abnormal findings to determine current health status. Course requires four hours per week clinical laboratory. Prereq: Admission to DNP program, graduate program in nursing. Prereq: NUR 921 or consent of instructor. (Same as NUR 923.)

NUR 632 COMPREHENSIVE PATIENT MANAGEMENT I.**(2)**

This clinical course places an emphasis on the role of the advanced practice nurse as a member of the health care team across a variety of settings. The clinical experience focuses on comprehensive patient assessment, diagnosis and management of health problems for individuals and their families. Prereq: NUR 631, NUR 706 or NUR 726 or NUR 722 (depending on the student's specialty track).

NUR 633 COMPREHENSIVE PATIENT MANAGEMENT II.**(2-4)**

This clinical experience focuses on synthesis of theoretical, scientific, and clinical knowledge as well as practice-based skills in the diagnosis and management of existing and potential health problems based on appropriate standards of care. Emphasis will be placed on the collaborative and leadership roles of the advanced practice nurse in health care delivery. Prereq: NUR 707, 726 or 723.

NUR 635 FOCUSED ADVANCED HEALTH ASSESSMENT.**(1)**

This advanced health assessment course offers focused health assessment techniques that are commonly used in specialty areas of advanced nursing practice. Assessments are performed within the context of developmental, physiological, psychological, cultural, and environmental parameters. Prereq or coreq: NUR 631.

NUR 640 BEST PRACTICES IN NURSING INSTRUCTION.**(3)**

This course is designed to assist graduate nursing students to develop the abilities to teach in educational institutions or healthcare agencies. Using a variety of learning theories and teaching methods students will learn how to develop a course syllabus and design appropriate learning activities, develop and deliver a lecture using a variety of active learning techniques, use simulation, teach on-line, work with students in the clinical setting, and assess student performance. The legal aspects of teaching will be addressed along with advantages and disadvantages of distributed learning, use of multimedia, and strategies design to actively engage students in the learning process. Prereq: Six credit hours of elective courses in education, Admission to Certificate in teaching nursing or consent of instructor.

NUR 641 BEST PRACTICES IN CLINICAL TEACHING.**(3)**

This course will give students the opportunity to plan, initiate, and evaluate learning activities within the profession of nursing. These activities may include lecture, seminar, simulation, on-line teaching, evaluating clinical performance and evaluating a syllabus. Students who plan to teach nursing in an academic setting will have a mentor who is a faculty member in a nursing program. Students who plan to teach nursing in other health care settings will have a mentor appropriate to their field. Prereq: Six credit hours of elective courses in education, NUR 640, Admission to Certificate in teaching nursing.

NUR 652 PHARMACOLOGIC APPLICATIONS IN PRIMARY CARE.**(3)**

This course is designed to prepare nurse practitioners, nurse midwives, and other health professionals for prescribing drugs within their scope of practice. Basic pharmacologic principles and the pharmacologic actions of the major drug classes will be discussed in relation to physiologic systems with emphasis on the application of these agents to primary care, nurse midwifery practice, and other health professions. Prereq: Graduate level pathophysiology course, admission to DNP program, graduate programs in nursing or consent of instructor.

NUR 653 PATHOPHYSIOLOGY.**(3)**

This course is designed to present an orientation to disease as disordered physiology. It is intended to enable the nurse practitioner to understand how and why the symptoms and signs of various conditions appear. In approaching disease as disordered physiology, this course analyzes the mechanism(s) of production of the symptoms and signs of different disease syndromes. In doing so, it recognizes the practitioner's need to understand the mechanism(s) underlying the disease and its clinical manifestations so that rational therapies can be devised. Thus, appropriate screening and diagnostic laboratory evaluative methods will also be included. Prereq: Admission to DNP program, graduate programs in nursing or consent of instructor. (Same as NUR 921.)

NUR 704 ADULT-GERONTOLOGY CLINICAL NURSE SPECIALIST IN PROMOTING HEALTH AND WELLNESS ACROSS THE LIFE SPAN OF THE ADULT. (3)

This course is designed to identify the role of the Adult-Gerontology Clinical Nurse Specialist (CNS) in promoting health and wellness in the adult gerontological individual using advanced practice nursing skills in contemporary health care settings and systems.

The patient population of the Adult-Gerontology CNS practice includes young adults (including late adolescents and emancipated minors), adults and older adults (including young-old, old, and old-old adults) in all contexts of care. A foundation of knowledge related to individual's perceptions of health and illness, preventative lifestyle behaviors, adherence to therapeutic regimens and lifestyle changes will be presented. This course will address how students will utilize the role of the Adult-Gerontology CNS using effective strategies to assist individuals in adopting and maintaining behaviors as they apply to a healthy lifestyle. Prereq: Graduate level pathophysiology; NUR 924, pre or corequisite: NUR 922, NUR 927, NUR 925, NUR 923 and admission to DNP program, graduate nursing programs, or consent of instructor.

NUR 705 ACUTE AND CHRONIC ILLNESS AND NURSING THERAPEUTICS II. (6)

This course deals with advanced practice nursing care for adults with acute and chronic illnesses and their families. Emphasis on understanding the conditions influencing patient/family quality of health and the consequences of disease and its treatment continues. Symptom interpretation and management are explored. Nursing therapeutics are examined for their effectiveness in managing symptoms and enhancing quality of health. The clinical experience provides opportunities to analyze selected roles in APN by working with other healthcare professionals. Under the guidance of a faculty advisor and preceptor, the student will assist patients and their families in promoting health across a spectrum of health care transitions. (Course requires 2 hours per week didactic and 16 hours per week clinical.) Prereq: NUR 704, enrollment in graduate program in Nursing or consent of instructor. Pre- or coreq: NUR 604.

NUR 706 ADVANCED PRACTICE NURSING CARE OF ACUTELY ILL ADULTS. (2)

This course focuses on the role of the acute care nurse practitioner in assessing, diagnosing, and managing acute episodes in the chronically ill adult. Emphasis is placed on the use of research and theories from biological, behavioral, and advanced practice nursing to facilitate the comprehensive care of chronically ill patients and their families. Prereq: MHA students admitted to Graduate Certificate in Nursing Studies; NUR 725. Prereq or coreq: NUR 631 and 652 for students enrolled in graduate program in Nursing; or consent of instructor.

NUR 707 ADVANCED PRACTICE NURSING CARE OF CRITICALLY ILL ADULTS. (6)

The didactic portion of this course focuses on the assessment, differential diagnosis and management of critically ill adults. Emphasis is placed upon biological, behavioral and advanced nursing concepts and research in order to facilitate the management and evaluation of therapies for critically ill adults and their families. The clinical portion of this course focuses on the care of critically ill adults in high acuity environments. The emphasis is placed upon students becoming a collaborative member of the health care team and incorporating both medical and advanced nursing concepts in the care of critically ill adults and their families. Prereq: NUR 632, NUR 706.

NUR 708 MEASURING AND DOCUMENTING NURSING PRACTICE. (4)

This course provides the knowledge and skills essential for advanced practice nurses to evaluate patient care. A systematic approach to collecting information related to nursing practice provides nurses with opportunities to substantiate their contributions to advanced practice. Measuring, documenting, and reporting patient, family, and organizational outcomes will be addressed. Mechanisms for evaluating nursing practices with regard to available resources also are examined. Clinical experience provides opportunities to continue to work with adults with acute and chronic illnesses. In addition, students will focus on the use of practice evaluation methods to document patient/family outcomes within a specific agency. Prereq: NUR 705 or NUR 707 (depending on the student's specialty area). Coreq: NUR 605.

NUR 712 ADVANCED PARENT-CHILD SEMINAR. (3)

The student will focus on evaluation of relevant beliefs, concepts, and theories related to maximizing the health of the family from pre-conception through adolescence. Using evidence-based literature, the student will explore physiologic, pathophysiologic, cognitive, behavioral, and psychosocial concepts, theories, and issues for their relevance in providing innovative approaches to family health care. Attention will be directed toward economic, ethical, cultural, legal, political and geographic factors that influence health behavior and care delivery. Family and child developmental theories will be used as an integrating framework. Prereq: MHA students admitted to Graduate Certificate in Nursing Studies; NUR 601 and 602 for students admitted to graduate nursing program; NUR 924 and NUR 925 for students admitted to the DNP program; or consent of instructor. (Same as NUR 955.)

NUR 713 ADVANCED NURSING CARE FOR FAMILIES, PRE-CONCEPTION THROUGH ADOLESCENCE I. (4-6)

The students in this course will test concepts and theories relevant to families. Collaboration with the family and other health care disciplines related to clinical decision making is expected. Students will apply knowledge with a variety of populations. Prereq: NUR 712, enrollment in graduate program in Nursing or consent of instructor.

NUR 714 ADVANCED NURSING CARE FOR FAMILIES, PRE-CONCEPTION THROUGH ADOLESCENCE II. (2-4)

Knowledge of families, pre-conception through adolescence, leadership, and clinical skills are

applied to provide advanced nursing care to a selected population. Emphasis is placed on maximizing health and resolving actual or potential health problems for the individual and the family. Analysis of system problems in health care delivery is conducted. Prereq: NUR 713, enrollment in graduate program in Nursing or consent of instructor. Pre- or coreq: NUR 604.

NUR 722 ROLE AND PRACTICE ISSUES FOR THE ADVANCED PRACTICE PSYCHIATRIC NURSE. (3)

The focus of this course is on concepts, theories and research underlying advanced practice psychiatric nursing (APPN). The scope and standards of psychiatric-mental health nursing practice frame study of APPN functions – psychotherapy, psychopharmacology interventions, community interventions, case management activities and consultation-liaison activities. Epidemiology, definitions, and classification models for mental health and mental illness are explored as a base for ethical, clinical decision making in advanced psychiatric nursing practice. Psychological, biological, social and cultural influences on coping responses of individuals and families across the lifespan for groups and communities of people/populations at risk are explored. Intervention models including prevention are introduced. Prereq: Pathophysiology and Health Assessment, admission to DNP program, graduate programs in nursing or consent of instructor. (Same as NUR 965.)

NUR 723 ADVANCED PRACTICE PSYCHIATRIC NURSING I. (6)

This course provides the opportunity for study of conceptual frameworks, theories, and research findings in clinical practice. The course focuses on the psychotherapy, psychobiological and supervision functions of the Advanced Practice Psychiatric nurse. Expansion of practice, the scope of primary prevention, biological and pharmacological theories, and psychotherapy model for interventions with clients, families, and the community are emphasized. Clinical experiences and sites will reflect multicultural concerns and emerging trends in the delivery of psychiatric care. During clinical experiences, comprehensive psychiatric assessments, diagnosis of common psychiatric illnesses, and co-occurring physical and substance abuse problems, and interventions will be practiced. Supervision as a function of the Advanced Practice Psychiatric Nurse is incorporated in clinical work. Prereq: NUR 722, enrollment in the graduate program in nursing or consent of instructor. Co-requisite: NUR 631.

NUR 724 ADVANCED PRACTICE PSYCHIATRIC NURSING II. (4)

This course builds on knowledge and skills acquired in NUR 723 (Practicum I) and provides the student with the opportunity to integrate and apply knowledge acquired in other course work. Theory of group therapy structure and process, practice models, and collaboration with mental health consumer/advocacy groups are introduced and emphasized to fit with emerging health care delivery systems. Mental health policy and practice implications are reviewed as well as the fiscal consequences of public policy on mental health service delivery. Diagnosis of common physical illnesses that mimic psychiatric illness and common psychiatric symptoms that occur in physical illness are studied. Ethical dilemmas in practice are studied. Prereq: NUR 723, NUR 652, enrollment in the graduate program or consent of the instructor. Co-requisite: NUR 605.

NUR 725 ADVANCED PRACTICE NURSING SEMINAR FOR NURSE PRACTITIONERS. (3)

This course provides an overview of advanced practice nursing. Select physical, pathophysiologic, social, mental health, and behavioral concepts will be discussed as a basis for clinical decision-making. Trends in health and nursing at national and state levels will be analyzed, as well as issues of professionalism. Emphasis will be on the role of the nurse practitioner as a collaborative member of the health care team, and on the nurse practitioner's contributions to health, wellness, and health promotion. Prereq: MHA students admitted to Graduate Certificate in Nursing Studies; NUR 601 and 602 for students enrolled in graduate program in Nursing; or consent of instructor.

NUR 726 PRIMARY CARE ADVANCED PRACTICE NURSING SEMINAR. (1-3)

This course focuses on the advanced practice nurse's management of common, acute health problems of individuals across the lifespan and determining the effect of the illness on families. Emphasis will be on differentiating a variety of signs and symptoms to formulate possible diagnoses. Students will demonstrate proficiency in assessing, diagnosing, managing, and evaluating common, acute health problems. Emphasis is on analysis of the role of the nurse practitioner as a collaborative member of the health care team. Prereq: NUR 725 or NUR 722. Pre- or co-requisites: NUR 652, 631, 603.

NUR 727 PRIMARY CARE ADVANCED PRACTICE NURSING SEMINAR. (2-5)

Seminar (2 credits): This course focuses on the advanced practice nurse's management in select common and stable chronic health problems of individuals across the lifespan. Emphasis will be placed on differentiating signs and symptoms to formulate possible diagnoses and determining the effect of the illness on the family. In addition, the nurse practitioner's role as a collaborative member of the health care team will be evaluated. Practicum (3 credits): Students will demonstrate proficiency in assessing, diagnosing, managing and evaluating selected chronic health problems based on appropriate standards of care. Prereq: NUR 632 and NUR 726 or NUR 722. Co-requisite: NUR 723 (psychiatric nurse practitioner students only).

NUR 732 ADVANCED PRACTICE IN PUBLIC HEALTH NURSING ASSESSMENT SPECIALTY SEMINAR. (3)

The community health nurse in advanced practice completes a three course sequence. Each course builds upon one of the three core functions of public health and nursing as identified by the Public Health Service of the U.S. This seminar addresses the first core function of assessment in advanced nursing practice in public health including the collecting, analyzing and dissemination of information about the health conditions, risks and resources in communities,

or a population in targeted health care environments, such as home health or managed care. Advanced community level assessment concepts, models, theories and research findings are used. Assessing vulnerable and multicultural populations, using informatics in the assessment process, and distinguishing between decisions based on individual and aggregate data are emphasized. Prereq: MHA students admitted to Graduate Certificate in Nursing Studies; prereq or coreq: NUR 629 and 653 for students enrolled in graduate program in Nursing; or consent of instructor.

NUR 733 ADVANCED PRACTICE IN PUBLIC HEALTH NURSING PRACTICUM I: POLICY. (3 or 6)

This course addresses the second public health core function: the use of assessment data in the analysis and development of policy and program plans to meet the health, illness and health resource needs of communities. Students will evaluate the use of policy as an aggregate-level intervention strategy and determine the extent to which a nursing intervention classification can be used to categorize policy strategies. Policies will be evaluated in relation to current national and state health objectives for special populations. Students will evaluate the potential impact of policies affecting communities and populations in targeted health care environments such as home health or managed care. They will use evidence from the literature to develop and implement policy recommendations designed to improve health outcomes. Working with vulnerable and multicultural communities and using informatics in policy and planning are emphasized. Prereq: NUR 732; enrollment in the graduate program in Nursing, enrollment in graduate certificate in Public Health Nursing, or consent of instructor.

NUR 734 ADVANCED PRACTICE IN PUBLIC HEALTH NURSING: PRACTICUM II: ASSURANCE. (3-4)

This course focuses on the third core public health function of monitoring health services to communities, collaborating with other health disciplines in the development and delivery of needed services, and using quality assurance activities to improve health, illness and health resources to communities. Students will learn the use of surveillance, evaluation, and performance improvement techniques in assuring cost-effective health services for communities and targeted health care environments such as home health or managed care. They will evaluate the use of nursing taxonomies for classification of aggregate level outcomes. Culturally competent care in vulnerable and multicultural communities and the use of informatics in assurance are emphasized. Prereq: NUR 733; enrollment in the graduate program in Nursing, enrollment in graduate certificate in Public Health Nursing, or consent of instructor.

NUR 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

NUR 750 CLINICAL MODELS FOR PROFESSIONAL AND ADVANCED NURSING CARE. (4)

Students will learn concepts underpinning clinical and business modeling. They will conduct integrated literature reviews around a particular clinical problem and develop evidence-based clinical models for practice using the best available research findings and best practices. Each will prepare a business plan for adoption of a clinical model by a nursing unit, clinical department, or clinical program that is fiscally and organizationally feasible. Students will incorporate concepts of teamwork and interdisciplinary collaboration into the plans, including evaluation and supervision. Prereq: NUR 604; enrollment in graduate program in nursing or consent of instructor.

NUR 751 RURAL HEALTH NURSING MANAGEMENT PRACTICUM. (3)

This course provides students with in-depth clinical experience in nursing management of an inpatient unit, a clinic, or a program. The focus is on use of clinical research in designing, implementing and evaluating an innovative model of care for a defined rural population. Students integrate knowledge of nursing research, leadership, management of personnel and financial management of clinical services in the application of their practice models. Prereq: NUR 704, 712, 722, 725, or 732; and NUR 740; or consent of instructor.

NUR 752 CULTURALLY COMPETENT HEALTHCARE: CLIENT, CLINICIAN, AND ORGANIZATIONAL PERSPECTIVES. (3)

This interprofessional course will increase students' multicultural awareness, knowledge, and skill in the assessment and provision of healthcare. Models will be evaluated that aim to enhance the assessment and provision of culturally competent care, from the clinician to the organizational levels. Students will learn how to integrate evidence-based decision-making competencies to maximize attention to the needs of a diverse healthcare workforce. Prereq: Completion of applicable theory and research course (e.g., NUR 601 and 602); enrollment in graduate program or consent of instructor.

NUR 760 OCCUPATIONAL/ENVIRONMENTAL HEALTH NURSING I (OEHN): PRINCIPLES AND PRACTICE. (3)

This course is designed to provide a basic understanding of occupational/environmental health nursing (OEHN). The history and value of OEHN will be explored. Standards and scope of OEHN practice will be examined. The roles of OEHNs within the framework of interdisciplinary professionals will be presented. Concepts and principles will be applied through field work and topic specific assignments. Legal and ethical issues are discussed. The students will also develop the knowledge and skills necessary to appraise research and apply to evidence-based nursing practice, including up-to-date electronic resources. Students learn to apply this knowledge through field experiences. Prereq: Admission to the PhD or DNP program or consent of instructor.

NUR 761 OCCUPATIONAL/ENVIRONMENTAL HEALTH NURSING II (OEHN): RESEARCH AND POLICY. (3)

This course will provide graduate nursing students with knowledge and skills needed to improve health outcomes of populations in occupational environments. Emphasis will be placed on research and policy development using nursing and interdisciplinary lenses. Further, this course will prepare the student to be proficient in the knowledge, skills, and abilities to effectively work with complex organizational systems and occupational settings. Students will learn how to utilize occupational data sets for the development of workplace research and policies at the local, state, national and global levels. Prereq: Admission to the PhD or DNP program or consent of the instructor and successful completion of NUR 760.

NUR 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

NUR 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

NUR 770 PHILOSOPHICAL FOUNDATIONS OF NURSING SCIENCE. (3)

The study of science as a way of reasoning and knowing, as it is influenced by the social, political, and gender contexts of scientists; the exploration of the philosophical foundations of nursing as a science and a historical evaluation of significant contributions to nursing science. Prereq: Admission to the graduate program in nursing or consent of instructor.

NUR 771 RESEARCH EXPERIENCE. (1-3)

Students work closely with a faculty research mentor to develop specific research skills by actively participating in a research study. Emphasis is placed on obtaining skills or research experiences needed to begin a sustained program of research. Prereq: Admission to the Ph.D. program in nursing or consent of instructor.

NUR 776 SPECIAL TOPICS SEMINAR (Subtitle required). (2-4)

A seminar on selected topics in nursing, with emphasis on knowledge development and application of research findings to clinical practice. Examples of topics are: computerized health surveillance at home, prevention of drug use in young children, support systems for the mentally ill, rehabilitation of injured farmers. May be repeated to a maximum of eight credits. Prereq: Consent of instructor.

NUR 778 PROSEMINAR IN CONTEMPORARY HEALTH AND NURSING POLICY ISSUES. (3)

A critical analysis of the development of policy related to health and nursing is emphasized. Attention is focused on the formation of a policy strategy to address a major policy issue affecting health care and the discipline of nursing.

NUR 779 DOCTORAL SEMINAR. (1-3)

A series of two-hour colloquia held every other week focusing on issues relative to the development of nursing science, the dissertation, and the role of the nurse scientist. The topics are selected by the students who are at various points of doctoral study in nursing. Included are topics on scientific integrity, the ethical conduct of research, and federal guidelines for inclusion of research subjects. The seminar is required for three semesters, one-credit hour each semester. Prereq: Enrollment in the doctoral program in nursing.

NUR 781 INDEPENDENT STUDY IN NURSING. (1-3)

An elective course which gives the student an opportunity to explore a topic of special interest. May be repeated to a maximum of eight credits. Prereq: Admission to graduate program in nursing or consent of instructor.

NUR 790 KNOWLEDGE DEVELOPMENT IN NURSING. (3)

This course focuses on the nature of nursing science and on approaches to the development of knowledge for use in nursing practice. Concepts and theories from philosophy of science and methods of theory development are used to critically examine the process of knowledge development in nursing. Emphasis is placed on the role of logical analysis and critical thinking in the development of theory for nursing practice. Prereq: Consent of instructor or enrollment in the doctoral program in nursing.

NUR 791 QUALITATIVE METHODS IN NURSING RESEARCH. (3)

The focus of this course is exploration of qualitative approaches to developing clinical nursing research. The relationship of data production and analysis strategies to underlying assumptions, theories, and research goals are considered. Applications of qualitative methods to research questions relevant to nursing science are explored. Prereq: NUR 790 or consent of instructor.

NUR 792 QUANTITATIVE METHODS IN NURSING RESEARCH. (3)

This course focuses on the application of quantitative research designs and methods for testing hypotheses in clinical nursing research. Students develop skills in critical evaluation of both intervention and nonintervention studies. Emphasis is placed on the identification and control of competing hypotheses in quantitative research. Prereq: STA 570 or consent of instructor.

NUR 793 MEASUREMENT OF NURSING PHENOMENA. (4)

This course focuses on measurement issues in conducting nursing research. Methods of instrument development and assessment of reliability and validity are discussed. The psychometric properties of instruments and measurement methods used in research are analyzed. Students conduct pilot psychometric research related to their dissertation topic. Prereq: NUR 790, 791, 792.

NUR 794 ANALYSIS, INTERPRETATION, AND PRESENTATION OF QUANTITATIVE DATA. (3)

This course provides opportunities for skill development in the application of a variety of analysis strategies to existing datasets. Students will identify hypotheses and/or research questions, test them using appropriate statistical methods, and interpret the results of their secondary analyses. Students also will gain experience in the presentation of findings via narrative, tabular, and oral formats. Prereq: STA 671 or equivalent, doctoral standing, and consent of instructor.

NUR 824 CLINICAL DECISION MAKING IN PROFESSIONAL NURSING I. (6)

The focus of this course is methods for making clinical decisions. Emphasis will be on how to collect and utilize data in formulating judgments about patient states and in choosing nursing actions for patients with health problems with predictable outcomes. Lecture, four hours; laboratory, six hours per week. Prereq: Junior standing in the RN-BSN curriculum in the College of Nursing. Prereq or coreq: NUR 831 and NUR 833.

NUR 900 PROCESS OF NURSING LEADERSHIP. (3)

Students synthesize theoretical leadership concepts with personal and professional values and gain an appreciation for the changing socio-cultural context in which clinical leadership is practiced. Issues of power, creativity, innovation, ethics and gender concerns are addressed. Self-reflection and self-mastery are two themes that underpin the entire course of study and support interpersonal skills that enhance leadership. Prereq: Admission to DNP program or consent of instructor.

NUR 902 NURSING LEADERSHIP IN HEALTH CARE. (3)

Students use theories of leadership, motivation, power, influence, and relationships to evaluate current practices and initiate future practices within health care, educational, and research organizations. Shared visions, advocacy, relationships and change management are addressed. Students study the change process in health related organizations by critically analyzing demographics, cultural influences, and current trends that affect practice, education, and research. Prereq: Enrollment in DNP program or consent of instructor.

NUR 903 APPLIED BIostatISTICS FOR OUTCOMES EVALUATION. (3)

This course provides opportunities for the application of a variety of quantitative analysis strategies in the evaluation of clinical outcomes. Statistical and other quantitative methods, including bivariate analysis, multiple regression, logistic regression, survival analysis and cost-benefit analysis are discussed. Students will apply these methods in the analysis of existing outcome data, using SPSS. Students also will gain experience in the interpretation and presentation of findings via narrative and tabular formats. Prereq: Enrollment in DNP program, approved graduate level statistics course, STA 570 or STA 580 or STA 569 or equivalent within the past 3 years, or consent of instructor.

NUR 904 EPIDEMIOLOGY APPLIED TO THE DESIGN AND EVALUATION OF NURSING AND HEALTH SERVICES. (3)

This course applies and integrates the principles and tools of epidemiology to the decision-making in a health care environment. It is intended for epidemiologists, managers, and clinical nurse executives and leaders who want to understand the value of epidemiology and population-based health care to the process of rational decision-making. The course builds upon fundamental epidemiologic principles and theory, with specific applications to nursing and public health services. Prereq: Enrollment in DNP program, approved graduate level statistics course, or consent of instructor.

***NUR 905 DOCTOR OF NURSING PRACTICE SEMINAR. (1)**

This seminar will provide students with an overview of the Doctor of Nursing Practice (DNP) degree, with a focus on historical development and contemporary practice issues. Roles of the advanced practice nurse (APN) with a DNP degree will be analyzed in the context of current policy statements from accrediting and professional organizations. Core competencies of APNs with DNP degrees will be applied to students' specialty roles. Portfolio development will be discussed. Prereq: Admission to DNP program or consent of instructor. Coreq: NUR 924 or NUR 915 or STA 569 or STA 580.

#NUR 906 APPLICATION OF BIostatISTICS AND EPIDEMIOLOGY FOR STRATEGIC DECISION MAKING. (3)

This course integrates and applies the principles and tools of epidemiology and biostatistics to decision-making in the health care environment. Core epidemiology and biostatistics concepts and analytic methods will be explored in the context of the role of executive and nursing leaders. The focus of the course is on critical appraisal and interpretation of data obtained through epidemiological investigations and statistical analyses in evaluating population and clinical outcomes and in making strategic organizational decisions. Principles and methods of data analysis central to understanding health-related indicators for clinical and population health management will be applied by students throughout the course. Prereq: STA 569, 570, 580, or equivalent.

***NUR 909 PROPOSAL DEVELOPMENT. (1)**

This course focuses on writing and critical thinking skills for development of a proposal for funding. Students will apply their knowledge related to evaluation of evidence and data collection to develop a proposal based on critical review of the literature that identifies gaps in knowledge and appropriate methods to address specific aims and/or objectives. Prereq: NUR 915; NUR 916; and STA 569 or 570. Formation of student advisory committee or consent of instructor. Coreq: One of the following: NUR 778, 903, 904, 916, 917, 919, 930, or 974.

NUR 910 CLINICAL RESIDENCY. (3)

This course provides students with the tools to evaluate and improve health care programs and clinical outcomes. Students develop feasible and reliable program evaluation designs. Students analyze the nature of, and explanations for variations in clinical practice patterns and clinical outcomes. Emphasis is on the use of program evaluation for improvements in clinical outcomes, efficiency, resource allocation, and cost reduction. Requires 12 hours per week residency time. Course must be repeated to a minimum of six credits. Graded pass/fail. Prereq: Completion of all DNP required course work with the exception of NUR 930.

NUR 914 ECONOMIC AND FINANCIAL ASPECTS OF CLINICAL AND POPULATION-BASED HEALTH CARE DELIVERY SYSTEMS. (3)

This course focuses on the application of economic and financial principles and practices to health care. Within this framework, content related to finance and economics, health care reimbursement models, incentive structures, market dynamics, economic evaluations, and quantification of outcomes are examined. The emphasis will be on critically analyzing the actual and potential impact of these dynamics on the structure and functioning of the health care system. Prereq: NUR 903 Applied Biostatistics, or consent of instructor.

NUR 915 EVALUATING EVIDENCE FOR RESEARCH AND EVIDENCE-BASED PRACTICE. (3)

This course focuses on critical evaluation and synthesis of the comprehensive evidence base including interventional and non-interventional research and non-research sources of evidence to elucidate the best available evidence and state of the science in a particular focused area to provide a foundation for the development of practice change based on best evidence, and to illuminate significant gaps in current knowledge to support the development of research studies. This course is designed to provide the tools to evaluate, translate and integrate evidence for scholarly inquiry and/or practice improvement. Prereq: NUR 925 or awarded MSN degree; and STA 570 or 569, or consent of instructor.

NUR 916 PROGRAM PLANNING AND EVALUATION FOR IMPROVEMENT IN PRACTICE AND HEALTH OUTCOMES. (3)

This course provides students with the knowledge and tools to develop, implement and evaluate evidence based clinical and administrative programs to improve healthcare and system outcomes. Students will use evidence to develop a program implementation and evaluation plan using the philosophies, theories, research and evidence-based clinical practices in nursing and related fields. Emphasis is on a strategic view of health care systems and effective clinical program planning/implementation/evaluation within integrated care delivery systems and use of evidence for effective decision making. Further emphasis is on the use of program evaluation for improvements in clinical outcomes and efficiency. Prereq: NUR 925 or MSN degree, and NUR 915 or consent of instructor.

NUR 917 TECHNOLOGY FOR TRANSFORMING NURSING AND HEALTHCARE. (3)

This course focuses on information systems technology as applied to nursing and healthcare. Knowledge and skills necessary for utilizing information systems and technology for the advancement of practice and health services research are emphasized. The use of computer systems and technology will be explored. Course requires four hours per week clinical. Prereq: Admission to DNP program or consent of instructor.

NUR 918 PROTECTION OF HUMAN SUBJECTS. (1)

This course provides an overview of the institutional review board process. Included are scientific integrity and ethics in clinical scholarship. Prereq: Enrollment in Doctor of Nursing Practice program; prereq: NUR 916, NUR 919 and written capstone proposal approved by student's DNP advisory committee or consent of instructor.

NUR 919 QUALITY AND SAFETY IN NURSING AND HEALTHCARE. (3)

This course provides the foundation to improve health outcomes for patient populations. National strategies, theories and methods to improve health outcomes will be explored. Emphasis will be placed on the systematic analysis of systems of care to promote safe, timely, effective, efficient, equitable, patient-centered care. Students will learn how to optimize the translation of evidence into clinical practice to enhance quality and safety. Students will gain knowledge to lead quality improvement and patient safety initiatives in health care systems. Prereq: Admission to DNP program or consent of instructor.

NUR 920 ADVANCED NURSING PRACTICE IN DYNAMIC HEALTH CARE SYSTEMS (Subtitle required). (3)

This synthesis course focuses on evolving nursing interventions in advanced clinical and administrative practice. Based on student's specialty/role, these interventions encompass direct care of individuals, management of individuals or populations, healthcare administration and health policy issues. Emphasis is on ways for expert nurse clinicians and administrators to solve problems and improve care in a dynamic healthcare system. This course requires eight hours per week clinical practice time. Prereq: NUR 914 and 917; coreq: 914 or consent of instructor.

NUR 921 PATHOPHYSIOLOGY. (3)

This course is designed to present an orientation to disease as disordered physiology. It is intended to enable the nurse practitioner to understand how and why the symptoms and signs of various conditions appear. In approaching disease as disordered physiology, this course analyzes the mechanism(s) of production of the symptoms and signs of different disease syndromes. In doing so, it recognizes the practitioner's need to understand the mechanism(s) underlying the disease and its clinical manifestations so that rational therapies can be devised. Thus, appropriate screening and diagnostic laboratory evaluative methods will also be included. Prereq: Admission to DNP program, graduate programs in nursing or consent of instructor. (Same as NUR 653.)

NUR 922 ADVANCED PHARMACOLOGY FOR ADVANCED PRACTICE NURSES: (Subtitle required). (4)

This course is designed to prepare advanced practice nurses to prescribe drugs within their scope of practice. Basic pharmacologic principles and the pharmacologic actions of the major drug classes will be discussed in relation to physiologic systems with emphasis on the application of these agents in practice. Prereq: Graduate level pathophysiology course, admission to DNP program, graduate programs in nursing or consent of instructor.

NUR 923 APPLICATIONS OF ADVANCED HEALTH ASSESSMENT. (3)

This advanced health assessment course offers comprehensive assessment of the individual within the context of the family and community. It includes comprehensive (systematic) history, physical, and psychological assessment of signs and symptoms, pathophysiologic changes, and psychosocial variations of the individual patient. Assessments are performed within the context of developmental, physiological, psychological, cultural, and environmental parameters. Emphasis is placed on developing a thorough understanding of the individual patient and differentiating normal and abnormal findings to determine current health status. Course requires four hours per week clinical laboratory. Prereq: Admission to DNP program, graduate program in nursing. Prereq: NUR 921 or consent of instructor. (Same as NUR 631.)

NUR 924 CONCEPTS, THEORIES, AND MODELS FOR ADVANCED PRACTICE NURSING. (3)

Students will examine the processes underlying the development of models, theories and conceptual framework. Selected models, theories and conceptual frameworks from nursing and other disciplines will be evaluated for their utility in advanced nursing practice. All are discussed within the context of the nature of nursing knowledge and the expanding scientific basis for advanced practice nursing. This course serves as a foundation for clinical courses in which models, theories, and conceptual frameworks are used to develop and evaluate new approaches to the clinical practice of advanced nursing practice. Prereq: Admission to DNP program or consent of instructor.

NUR 925 RESEARCH METHODS IN ADVANCED PRACTICE NURSING. (3)

This course provides the knowledge and skills essential for using research to support clinical and organizational decision-making. The strengths and limitations of various research designs and methods are reviewed for their utility in answering clinical questions, evaluating care delivery and patient outcomes, and making clinical decisions. Prereq: Graduate statistics course and NUR 924, admission to DNP program, graduate programs in nursing, or consent of instructor. (Same as NUR 602.)

NUR 926 SYSTEMS APPLICATION OF ADVANCED HEALTH ASSESSMENT. (3)

This systems level advanced health assessment course offers comprehensive assessment and skill development opportunities for Advanced Practice Public Health Nurses and Nurse Executives. It includes intensive work on the principles and techniques of performing a comprehensive systems health assessment in the context of aggregate, population, community, and organizational parameters. Aggregate, population, community, and organizational models are analyzed for use with diverse/varied systems. Emphasis is placed on working with diverse stakeholders for achievement of aggregate, population, community or organizational health related goals. Prereq: Admission to DNP program or consent of instructor.

***NUR 927 SPECIAL TOPICS IN PHARMACOLOGY: (Subtitle required). (1)**

This course is designed to introduce the Advanced Practice Registered Nurse (APRN) student to the application of pharmacologic principles to special populations and specialized therapeutic areas. Students will enroll in section related to their nursing specialty: family-primary care, adult-gero primary care, pediatric-primary care, adult-gero acute care, or family psychiatric mental-health. Prereq: Graduate pathophysiology course, enrollment in the graduate program in Nursing, or consent of instructor. Coreq: One of the following: NUR 930, 941, 942, 946, 947, 956, 957, 958, 959, 961, 962, 966, 967 or 980.

***NUR 930 PROBLEMS IN ADVANCED PRACTICE NURSING (Subtitle required). (1-5)**

This course provides opportunity for study of clinical problems encountered in particular clinical areas of advanced nursing practice. Application of the scope and standards of specialty practice, application of evidence-based practices, and development of techniques for nursing interventions are emphasized. Course requires four hours per week clinical time for each credit hour enrolled. Prereq: Admission to graduate nursing program, and completion of second DNP speciality course or consent of instructor. Coreq: One of the following: NUR 910, 927, 941, 942, 946, 947, 956, 957, 958, 959, 961, 962, 966, 967 or 980.

NUR 940 ROLES, ISSUES, AND HEALTH PROMOTION FOR ADULT GERONTOLOGY ACUTE CARE NURSE PRACTITIONER. (3)

This introductory course provides an overview of advanced practice nursing and the adult-gerontology acute care nurse practitioner role-evolution. Professional issues and trends at the state and national levels will be analyzed. This course will focus on the adult-gerontology acute care nurse practitioner's contributions to health, wellness, and health promotion among populations commonly served. Scope, standards and competencies will be addressed as well as licensure, accreditation and certification. The interaction of the AG-ACNP within the continuum of acute and critical care health care delivery system will be emphasized. Prereq: NUR 925, NUR 924. Prereq or coreq: NUR 921, NUR 922 and NUR 923.

NUR 941 ADULT-GERONTOLOGY ACUTE CARE NURSE PRACTITIONER SEMINAR I. (3)

This didactic Adult Gerontological Acute Care Nurse Practitioner course focuses on the role of the AG-ACNP in the complex care of acute and critically ill adult and geriatric patients. Course content includes the diagnosis and management of episodic and chronic illness; diagnostic tests; technologic and therapeutic interventions. The patient population of the Adult-Gerontology ACNP includes young adults (including late adolescents and emancipated minors), adults and older adults in all contexts of complex acute and chronic illness. Particular attention is given to providing evidence-based, comprehensive, individualized, ethical, and collaborative care that takes into consideration health quality, costs, and outcomes for the acutely ill patient population. Prereq: NUR 940, 921, 923, and 922; coreq: NUR 943.

NUR 942 ADULT-GERONTOLOGY-ACUTE CARE NURSE PRACTITIONER SEMINAR II. (3)

This Adult Gerontology Acute Care Nurse Practitioner didactic course focuses on the assessment, differential diagnosis and management of complex critically ill adults who are physiologically unstable, technologically dependent, and/or are highly vulnerable to complications. Particular attention is given to providing evidence based, comprehensive, individualized, and collaborative care that takes into consideration health quality, costs, and outcomes for the acute and critically ill adult/geriatric patient and their family. This course prepares the student to assess and diagnose episodic and chronic highly acute and critical illnesses, interpret diagnostic tests, and use technologic and therapeutic interventions through admission, transition, and discharge. Trauma, end-of-life care, leadership, critique of the AG-ACNP role and clinical scholarship/inquiry are addressed in this course. Prereq: NUR 940, 941, NUR 921, 922, and 923; coreq: NUR 944.

NUR 943 ADULT GERONTOLOGY-ACUTE CARE NURSE PRACTITIONER CLINICAL PRACTICUM I. (3)

This is the first Adult Gerontology Acute Care Nurse Practitioner clinical course focusing on the physical, cultural, spiritual, and ethical care of the adult acutely and critically ill patient. Settings include all units where highly acute and critically ill patients' individual needs can be met and their outcomes optimally achieved. Students conduct an inclusive history and physical examination, document findings, and then assist with planning and implementing a comprehensive evidence-based plan of care. This course prepares the student to assess and begin to diagnose episodic and chronic highly acute illnesses, interpret diagnostic tests, and utilize technologic and therapeutic interventions. Prereq: NUR 940, NUR 921, NUR 922, and NUR 923; coreq: NUR 941.

NUR 944 ADULT GERONTOLOGY-ACUTE CARE NURSE PRACTITIONER CLINICAL PRACTICUM II. (3)

This is the second Adult Gerontology Acute Care Nurse Practitioner clinical course focusing on the physical, cultural, spiritual, and ethical care of the adult acutely and critically ill patient. Settings include all units where highly acute and critically ill patients' individual needs can be met and their outcomes optimally achieved. This Adult-Gerontology Acute Care Nurse Practitioner clinical course focuses on the clinical assessment and care of complex adult patients who are physiologically unstable, technologically dependent, and/or are highly vulnerable to complications. This course prepares the student to assess and diagnose complex episodic and chronic acute and critical illness, interpret diagnostic tests, and use technologic and therapeutic interventions through admission, transition and discharge. Particular attention is given to providing evidence based, comprehensive, individualized, and collaborative care that takes into consideration health policy, quality, costs, and outcomes for the acute and critically ill patient. Students conduct an inclusive history and physical examination, document findings, and then assist with planning and implementing a comprehensive evidence-based plan of care. This course builds upon NUR 943 to prepare the student to assess and diagnose episodic and chronic highly acute illnesses, interpret diagnostic tests, and utilize technologic and therapeutic interventions in a safe and cost effective manner. Prereq: NUR 921, NUR 922, NUR 923, NUR 940, NUR 941 and NUR 943; coreq: NUR 942.

NUR 945 ADULT-GERONTOLOGY CLINICAL NURSE SPECIALIST IN PROMOTING HEALTH AND WELLNESS ACROSS THE LIFE SPAN OF THE ADULT. (3)

This course is designed to identify the role of the Adult-Gerontology Clinical Nurse Specialist (CNS) in wellness (physical and mental), health promotion and disease prevention, risk assessment and reduction, individual and community screening measures and alternative health practices through the adult life span using advanced practice nursing skills in contemporary health care settings and systems. The patient population of the Adult-Gerontology CNS practice includes young adults (including late adolescents and emancipated minors), adults and older adults (including young-old, old, and old-old adults) in all contexts of care. A foundation of knowledge related to individual's perceptions of health, preventative lifestyle behaviors, adherence to therapeutic regimens and lifestyle changes will be presented. This course will address how students will learn and practice the role of the Adult-Gerontology CNS using effective strategies to assist individuals in adopting and maintaining behaviors as they apply to a healthy lifestyle. Prereq: Graduate level pathophysiology; NUR 924; prereq or coreq: NUR 922, NUR 927, NUR 925, NUR 923 and admission to DNP program, graduate nursing programs, or consent of instructor.

NUR 946 ADULT-GERONTOLOGICAL CLINICAL NURSE SPECIALIST PROVIDING ACUTE CARE ACROSS THE LIFE SPAN OF THE ADULT. (3)

This course provides content for advanced practice nursing care for adults and geriatrics with acute illnesses in a variety of settings in complex health care systems. The patient population includes young adults (including late adolescents and emancipated minors), adults and older adults (including young-old, old, and old-old adults) in all contexts of care. Emphasis is on

developing clinical expertise in a specialty area to interpret and manage acutely ill patients and their clinical problems. Planning, directing, delivering, and evaluating care is based on theory and research. Students will combine didactic learning with clinical experiences. Prereq: NUR 921, NUR 922, NUR 945 or consent of the instructor; coreq: NUR 948.

NUR 947 ADULT-GERONTOLOGICAL CLINICAL NURSE SPECIALIST PROVIDING CHRONIC CARE ACROSS THE LIFE SPAN OF THE ADULT. (3)

This course provides content for advanced practice nursing care of adults and geriatrics with chronic disease and illnesses in a variety of settings in complex health care systems. The patient population includes young adults (including late adolescents and emancipated minors), adults and older adults (including young-old, old, and old-old adults). Emphasis is on developing clinical expertise to interpret and manage chronically ill patients and their clinical problems. Planning, directing, delivering, and evaluating care is based on theory and research. Students will combine didactic learning with clinical experiences. Prereq: NUR 945, NUR 946, or consent of instructor; coreq: NUR 949.

NUR 948 CLINICAL PROBLEMS IN ACUTE CARE ACROSS THE ADULT GERO LIFE SPAN IN ADVANCE PRACTICE NURSING. (3)

This course provides opportunity for application of evidence-based interventions for clinical problems encountered in the acute care setting clinical practice of advanced nursing practice. Application of the scope and standards of specialty practice, application of evidence-based practices, and development of techniques for nursing interventions are emphasized. This course prepares the student to conduct comprehensive, holistic wellness/illness assessments, obtain data necessary to formulate differential diagnoses/plans of care and evaluate outcomes using advanced clinical judgment to diagnose, treat, and evaluate patient care problems in the acute care setting. Prereq: NUR 945, or consent of instructor; coreq: NUR 946.

NUR 949 CLINICAL PROBLEMS IN CHRONIC CARE ACROSS THE ADULT GERO LIFE SPAN IN ADVANCE PRACTICE NURSING. (3)

This course provides opportunity for application of evidence-based interventions for clinical problems encountered in chronic care of the Adult-Gero patient in clinical practice of advanced nursing practice. Application of the scope and standards of specialty practice, application of evidence-based practices, and development of techniques for nursing interventions are emphasized. This course prepares the student to conduct comprehensive, holistic wellness/illness assessments, obtain data necessary to formulate differential diagnoses/plans of care and evaluate outcomes using advanced clinical judgment to diagnose, treat, and evaluate chronic patient care problems in complex health care settings. Prereq: NUR 945, or consent of instructor; coreq: NUR 947.

NUR 950 PRIMARY CARE ADVANCED PRACTICE CLINICAL: (Subtitle required).

This clinical experience focuses on comprehensive patient assessment, diagnosis and management of health problems commonly seen in primary care. Emphasis will be placed on differentiating signs and symptoms to formulate possible diagnoses and determining the effect of the illness on the family. Students will demonstrate competence in assessing, diagnosing, managing and evaluating selected health problems based on appropriate standards of care. Health promotion and disease prevention strategies will be emphasized. In addition, the primary care nurse practitioner's role as a collaborative member of the health care team will be evaluated. Course requires 12 hours per week clinical. Prereq: Admission to DNP Program; NUR 960 or NUR 955. Coreq: NUR 956, 957, 961 or 962.

#NUR 952 PEDIATRIC ACUTE CARE ADVANCED PRACTICE CLINICAL: (Subtitle required). (3)

This clinical experience focuses on comprehensive patient assessment, diagnosis and management of health problems commonly seen in acute and critical care. Emphasis will be placed on differentiating signs and symptoms to formulate possible diagnoses and determining the effect of the illness on the family. Students will demonstrate competence in assessing, diagnosing, managing and evaluating selected health problems based on appropriate standards of care. Health promotion and disease prevention strategies will be emphasized. In addition, the acute care nurse practitioner's role as a collaborative member of the health care team will be evaluated. Course requires 12 hours per week clinical (180 hours per semester). Prereq: Admission to DNP Program; NUR 923; NUR 922; and NUR 955. Coreq: NUR 958 or NUR 959.

NUR 955 ADVANCED PARENT-CHILD SEMINAR. (3)

The student will focus on evaluation of relevant beliefs, concepts, and theories related to maximizing the health of the family from pre-conception through adolescence. Using evidence-based literature, the student will explore physiologic, pathophysiologic, cognitive, behavioral, and psychosocial concepts, theories, and issues for their relevance in providing innovative approaches to family health care. Attention will be directed toward economic, ethical, cultural, legal, political and geographic factors that influence health behavior and care delivery. Family and child developmental theories will be used as an integrating framework. Prereq: MHA students admitted to Graduate Certificate in Nursing Studies; NUR 601 and 602 for students admitted to graduate nursing program; NUR 924 and NUR 925 for students admitted to the DNP program; or consent of instructor. (Same as NUR 712.)

NUR 956 PNP-PRIMARY CARE: ACUTE ILLNESS MANAGEMENT. (3)

This course allows the Post-Master's Certificate or the practice-doctorate pediatric, primary care nursing student the opportunity to incorporate other health care disciplines and engage clinical decision-making skills into the planning of care for the child with common, acute minor illnesses seen in primary care. Health restoration strategies will be incorporated into the management of common deviations from health as they occur in children (birth to 21 years). Focus will be given to the synthesis of knowledge obtained from nursing, medicine, pharmacology and the social/behavioral sciences and its incorporation into the framework of advanced

practice nursing. Developmental, pathophysiologic, cognitive, behavioral, and psychosocial concepts will be applied in assessing children of various ages (birth to 21 years) using a variety of modalities integrating current research and evidence-based findings into planned clinical management. Prereq: Admission to DNP program and NUR 921, NUR 922, NUR 923 and NUR 955. Coreq: NUR 950 (3 credit hour clinical).

NUR 957 PNP-PRIMARY CARE: CHRONIC ILLNESS AND SPECIAL NEEDS MANAGEMENT. (3)

This course allows the Post-Master's Certificate or the practice-doctorate pediatric, primary care or FNP nursing student the opportunity to examine the impact of children and adolescents (birth through 21 years) with special health care needs and those with complex (stable), chronic health deviations on the pediatric client, their families, and the community. By incorporating the role of the primary care PNP into the process of utilizing clinical decision-making skills, interprofessional collaboration, management and intervention strategies, the student will plan collaborative care for the pediatric client with chronic health deviations or special healthcare needs in the primary care or tertiary care setting. Current evidence-based, research and management guidelines will be analyzed using the synthesis of knowledge gained from collaborative sciences and applied to the framework of advanced practice nursing. Prereq: NUR 956; for students admitted to the Post-master's Certificate (PC-PNP) or pediatric primary care nurse practitioner BSN-DNP program; consent of the instructor. Coreq: NUR 950 (3 credit hour clinical course).

***NUR 958 PNP-ACUTE CARE: ACUTE/COMPLEX ILLNESS MANAGEMENT. (3)**

This course allows the graduate pediatric nursing student to collaborate with other health care disciplines and incorporate clinical decision-making into the care and management of the child with complex, acute/critical illnesses seen in the acute care setting. Current evidence and practice guidelines will be integrated into the management of acute illnesses commonly seen in children (birth to 21 years). The role of the AC-PNP will be integrated into health restoration strategies in various acute clinical settings. Focus will be given to the synthesis of knowledge obtained from nursing, medicine, pharmacology and the social/behavioral sciences and its incorporation into the framework of advanced practice nursing. Developmental, pathophysiologic, cognitive, behavioral, and psychosocial concepts will be applied in assessing children using a variety of modalities integrating current research and evidence-based findings into clinical practice. Prereq: Admission to professional nursing program, NUR 955, and NUR 959. Coreq: NUR 952.

***NUR 959 PNP-ACUTE CARE: CHRONIC ILLNESS AND SPECIAL NEEDS MANAGEMENT. (3)**

This course allows the graduate pediatric nursing student the opportunity to examine the care of children and adolescents (birth through 21 years) with special health care needs and those with complex/critical, chronic health deviations on the pediatric client, their families, and the community. By incorporating the role of the PNP into the process of utilizing clinical decision-making skills, interprofessional collaboration, management and intervention strategies, the student will provide collaborative care to the pediatric client with acute/critical chronic health deviations or special healthcare needs in the acute care setting. Current evidence-based, research and management guidelines will be analyzed using the synthesis of knowledge gained from collaborative sciences and applied to the framework of advanced practice nursing. Prereq: Admission to professional nursing program, NUR 921; NUR 922; and NUR 923. Coreq: NUR 952.

NUR 960 HEALTH PROMOTION AND ROLE DEVELOPMENT FOR PRIMARY CARE NURSE PRACTITIONERS. (3)

This course provides an overview of the primary care nurse practitioner's role in the health care system. The nurse practitioner's contributions to health promotion, clinical prevention and population health will be explored. Selected physical, pathophysiologic, social, mental health, behavioral, cultural, and ethical concepts will be discussed as a basis for clinical decision-making. Professional issues and trends in health and nursing at national and state levels will be analyzed. Emphasis will be on the role of the primary care nurse practitioner as a collaborative member of the health care team. Prereq or coreq: NUR 921, NUR 922, NUR 927, NUR 923 and Admission to DNP Program or consent of instructor.

NUR 961 EPISODIC HEALTH PROBLEMS IN ADULT AND GERIATRIC PRIMARY CARE. (3)

This course focuses on the primary care nurse practitioner's assessment, diagnosis and management of episodic health problems of adult and geriatric individuals. Emphasis will be on differentiating a variety of signs and symptoms and interpreting data to formulate differential diagnoses. The use of evidence-based clinical practice guidelines to assist in the development, implementation, and evaluation of the plan of care will be emphasized. The impact of episodic health problems on the family as a whole will be analyzed. In addition, the primary care nurse practitioner's role as a collaborative member of the health care team will be evaluated. Prereq: Admission to DNP program and NUR 921, NUR 922, NUR 923 and NUR 960. Coreq: NUR 950 (3 credit hour clinical).

NUR 962 CHRONIC HEALTH PROBLEMS IN ADULT AND GERIATRIC PRIMARY CARE. (3)

This course focuses on the primary care nurse practitioner's assessment, diagnosis and management of common chronic health problems of adult and geriatric individuals. Emphasis will be on differentiating a variety of signs and symptoms and interpreting data to formulate differential diagnoses. The use of evidence-based clinical practice guidelines to assist in the development, implementation, and evaluation of the plan of care will be emphasized. The impact of chronic health problems on the family as a whole will be analyzed. In addition, the primary care nurse practitioner's role as a collaborative member of the health care team will

be evaluated. Prereq: Admission to DNP program, and NUR 961. Coreq: NUR 950 (3 credit hour clinical).

NUR 963 PRIMARY CARE OF CHILDREN AND CHILDBEARING FAMILIES. (3)

This course focuses on the Family Nurse Practitioner's role in the assessment, diagnosis and management of selected acute and chronic health problems among children in the primary care setting as well as care of the childbearing family. Emphasis will be placed on differentiating a variety of signs and symptoms and interpreting data to formulate differential diagnoses. The use of evidence-based clinical practice guidelines to assist in the assessment and management of acute and chronic health problems will be explored. Growth and development, well child exams, prenatal and postpartum care and the impact of health problems on the family will be emphasized. Prereq: NUR 921, NUR 922, NUR 927, NUR 923, NUR 960, admission to DNP program or consent of instructor.

NUR 965 ROLE AND PRACTICE ISSUES FOR THE ADVANCED PRACTICE PSYCHIATRIC NURSE. (3)

The focus of this course is on concepts, theories and research underlying advanced practice psychiatric nursing (APPN). The scope and standards of psychiatric-mental health nursing practice frame study of APPN functions – psychotherapy, psychopharmacology interventions, community interventions, case management activities and consultation-liaison activities. Epidemiology, definitions, and classification models for mental health and mental illness are explored as a base for ethical, clinical decision making in advanced psychiatric nursing practice. Psychological, biological, social and cultural influences on coping responses of individuals and families across the lifespan for groups and communities of people/populations at risk are explored. Intervention models including prevention are introduced. Prereq: Pathophysiology and Health Assessment, admission to DNP program, graduate programs in nursing or consent of instructor. (Same as NUR 722.)

NUR 966 DIAGNOSIS AND MANAGEMENT OF PSYCHIATRIC ILLNESSES IN ADULTS AND ELDERLY. (3)

This course focuses on the study of conceptual frameworks, theories, and research related to common psychiatric disorders among adults and elderly patients. Concepts related to diagnostic criteria, assessment, treatment, evaluation, and recovery from psychiatric illness in adult and elderly patients will be emphasized. The course will also focus on biological and pharmacologic theories, developmental issues, psychotherapeutic modalities, and primary prevention of psychiatric illnesses in this population. Treatment approaches for patients with comorbid psychiatric and medical/substance abuse will be discussed. Prereq: NUR 921, 923 and 965. Pre or coreq: NUR 922. Coreq: NUR 968.

NUR 967 DIAGNOSIS AND MANAGEMENT OF PSYCHIATRIC ILLNESSES IN CHILDREN, ADOLESCENTS AND YOUNG ADULTS. (3)

This course focuses on the study of conceptual frameworks, theories, and research related to common psychiatric disorders among children, adolescents, and young adults. Concepts related to diagnostic criteria, assessment, treatment, evaluation, and recovery from psychiatric illness in child, adolescents, and young adult patients will be emphasized. The course will also focus on biological and pharmacologic theories, developmental issues, psychotherapeutic modalities, and primary prevention of psychiatric illnesses in this population. Treatment approaches for active duty military service personnel and veterans with psychiatric illnesses will be discussed. Prereq: NUR 965, 966, 968. Coreq: NUR 969.

NUR 968 CLINICAL MANAGEMENT OF PSYCHIATRIC DISORDERS IN ADULTS AND ELDERLY. (3)

This course will provide students with clinical experiences in the treatment of adults and elderly patients with psychiatric illnesses. During clinical experiences, foundational competencies for advanced nursing practice will be addressed and practiced. Students will conduct comprehensive and systematic psychiatric assessments, diagnose common psychiatric illnesses, implement pharmacologic and psychosocial interventions, and evaluate treatment outcomes for adults and elderly patients with psychiatric disorders. A variety of settings across the healthcare continuum will be utilized. Multidisciplinary and interprofessional collaboration as functions of the Advanced Practice Psychiatric Nurse is incorporated into clinical work. Prereq: NUR 921, 923 and 965. Pre/coreq: NUR 922. Coreq: NUR 966.

NUR 969 CLINICAL MANAGEMENT OF PSYCHIATRIC DISORDERS IN CHILDREN, ADOLESCENTS AND YOUNG ADULTS. (3)

This course will provide students with clinical experiences in the treatment of children, adolescents and young adults with psychiatric disorders. During clinical experiences, foundational competencies for advanced nursing practice will be addressed and practiced. Students will conduct comprehensive and systematic psychiatric assessments, diagnose common psychiatric illnesses, implement pharmacologic and psychosocial interventions, and evaluate treatment outcomes for children, adolescents and young adults. A variety of settings across the healthcare continuum will be utilized. Multidisciplinary and interprofessional collaboration as functions of the Advanced Practice Psychiatric Nurse is incorporated into clinical work. Prereq: NUR 921, 922, 923, 965 and 966. Coreq: NUR 967.

***NUR 970 ASSESSMENT AND DESIGN OF COMPLEX HEALTHCARE SYSTEMS: SEMINAR. (3)**

This advanced health systems course will prepare Nurse Executives to conduct comprehensive assessments of organizations and design evidence-based processes to optimize workflow across organizational units. Students will learn to conduct a comprehensive systems health assessment guided by organization theory. Organizational leaders are responsible for coordination and communication across work units within organizations, thus, students will design evidence-based strategies to assist the healthcare team in managing the transitions of care among

team members and across the continuum of care. Attention will be focused on providing safe, patient-centered care provided at the right time in the most appropriate setting. Enrollment in the College of Nursing or permission from the instructor is required to enroll in this course. Coreq: NUR 971.

***NUR 971 ASSESSMENT AND DESIGN OF COMPLEX HEALTHCARE SYSTEMS: CLINICAL PRACTICUM. (1)**

This advanced health systems course will prepare Nurse Executives to conduct comprehensive assessments of organizations and design evidence-based processes to optimize workflow across organizational units. Students will learn to conduct a comprehensive systems health assessment guided by organization theory. Organizational leaders are responsible for coordination and communication across work units within organizations, thus, students will design evidence-based strategies to assist the healthcare team in managing the transitions of care among team members and across the continuum of care. Attention will be focused on providing safe, patient-centered care provided at the right time in the most appropriate setting. Enrollment in the College of Nursing or permission from the instructor is required to enroll in this course. Prereq: Enrollment in DNP program; coreq: NUR 970.

***NUR 972 POPULATIONS AND ORGANIZATIONAL SYSTEMS LEADERSHIP: RELATIONSHIP BASED EXECUTIVE LEADERSHIP IN HEALTHY WORKING ENVIRONMENTS. (3)**

This systems level course provides opportunities for leadership development for Nurse Executives. The course focuses on theories of systems, leadership, motivation, politics, power, influence, justice, ethics, and organizational behavior to lead individuals and groups providing healthcare in organizations and in the community. The course will also focus on organizational, legal, economic, and technical issues concerned with acquiring, motivating, and retaining employees, with emphasis directed to the development, implementation, and assessment of policies and practices consistent with legal, social, human, and environmental dynamics. Emphasis will be placed on analyzing the practice environment using research findings, literature and aggregate data. Students will learn how to integrate evidence-based decision making competencies to maximize attention to diverse challenges in the work environment. Enrollment in the College of Nursing or permission from the instructor is required to enroll in this course.

***NUR 974 STRATEGIC LEADERSHIP IN COMPLEX HEALTHCARE ORGANIZATIONS. (2)**

Preparing nurses to work as strategic executive leaders in complex organizations and systems in both community and inpatient/outpatient healthcare settings is the focus of this course. Leading in today's healthcare environment brings challenges that require new and adaptable skill sets. Students will learn strategies for working effectively within varied healthcare environments and for surviving and thriving as an executive leader both at the organizational and systems level. In this course students will focus on topics that are essential for today's executive nursing leader, to include executive presence, power of emotions, disruptive innovation, strategy execution, financial savvy and business skills, effective organizational collaborations, boundary spanning, a culture of quality, managing variation, and managing healthcare environment challenges (i.e., legal, financial, human resources, etc). As the final outcome in this course, students will develop a business plan related to a corporate systems level innovation within a multi-organization system. Prereq: NUR 972. Coreq: NUR 975.

***NUR 975 STRATEGIC LEADERSHIP IN COMPLEX HEALTHCARE ORGANIZATIONS: CLINICAL. (2-3)**

Learning about the rewards and challenges of being in an executive nursing leadership role is the focus of this course. Students will precept with an Executive Nurse Leader in a complex organization/system environment (community, clinic setting, hospital setting, etc.). Students will observe/learn strategies for working effectively within complex organizations/systems and for surviving and thriving as an executive leader. In this course students will evaluate how executive leaders manage the financial/business challenges within the organization, maintain executive presence in the organization, set and span organizational boundaries, manage their emotions, and effectively collaborate with other organizational leaders. The student will also learn how the organization deals with disruptive innovation, executes new strategies, establishes a culture of quality, and manages variation. Students will gather data for the business plan they will write as part of the Nursing 974 Seminar Course. This course is to be taken at the same time the student is taking Nursing 974 Seminar. Prereq: NUR 972. Coreq: NUR 974.

NUR 976 POPULATIONS AND ORGANIZATIONAL SYSTEMS LEADERSHIP III SEMINAR: SYSTEMS AND COMMUNITY DIMENSIONS OF CRISES AND DISASTER PREPAREDNESS. (2)

This course will provide Advanced Practice Public Health Nurses and Nurse Executives with knowledge and skills needed to improve health outcomes of populations and micro, meso, and macro systems. Further, this course will prepare the student to be proficient in the knowledge, skills, and abilities to effectively work with complex organizational and community systems in crisis and disaster situations. Students will learn how to integrate evidence-based decision-making competencies to maximize attention to organizational and community resource challenges. Emphasis will be placed on crises and disaster prevention, preparedness, response, and recovery whether human or natural, when nursing, organizational, and system responses are required. Prereq: NUR 974 and 975, or permission of instructor; corequisite: NUR 977.

NUR 977 POPULATIONS AND ORGANIZATIONAL SYSTEMS LEADERSHIP III CLINICAL: SYSTEMS AND COMMUNITY DIMENSION OF CRISES AND DISASTER PREPAREDNESS. (3)

This course is a companion to NUR 976. It provides directed clinical/practicum experiences designed so the student is able to apply content from NUR 976 through exploring, participating in, and providing leadership related to selected aspects of disaster planning, management, and

Course Descriptions

recovery in a specific community or organization. The instructor will work individually with each student to insure that the practicum responds to course objectives, the student's goals, and learning needs. This course requires 12 hours per week clinical time. Prereq: NUR 974 and 975. Corequisite: NUR 976.

#NUR 978 POPULATION HEALTH: SEMINAR. (2)
Students will be challenged to analyze the philosophical, scientific, and historical roots of population health and to consider the role which public health, economics, technology, public policy, and politics plays in developing and sustaining population health initiatives. Attention will also be given to the strategies and methods, including quality parameters used in the application of population health concepts in health-oriented initiatives in populations at the aggregate, community, occupational/environmental, and social/cultural dimensions of health in their role as leaders in population health within diverse settings. Coreq: NUR 979.

#NUR 979 POPULATION HEALTH: CLINICAL. (2-3)
This course is a companion to NUR 978. It provides directed clinical/practicum experiences designed so the student is able to apply content from NUR 978 through exploring, participating in, and providing leadership related to selected aspects of population health. The instructor will work individually with each student to insure that the practicum responds to both the course objectives and the student's goals and learning needs. Enrollment in the College of Nursing and in NUR 978 are required to enroll in this course. Coreq: NUR 978.

NUR 980 SPECIAL TOPICS IN NURSING (Subtitle required). (1-6)
Exploration of selected topics or issues in nursing. Directed by a faculty member with expertise in the topic under study. Lecture, 0-4 hours; laboratory, 0-12 hours per week. May be repeated with different topics to a maximum of nine credits. Prereq: Variable, specified when topic identified. Prereq: Admission to DNP program or consent of instructor.

NUR 981 INDEPENDENT STUDY IN NURSING. (1-3)
An elective course that provides students with an opportunity to explore a topic of interest under the direction of a faculty member. The end result should be negotiated between students and faculty and should yield a scholarly product. The minimum number of hours to be spent on the project and the means of evaluation will be decided before beginning the project. May be repeated to a maximum of 12 credits. Prereq: Enrollment in Doctor of Nursing Practice Program or consent of instructor.

OBG Obstetrics and Gynecology

OBG 815 FIRST-YEAR ELECTIVE, OBSTETRICS AND GYNECOLOGY. (1-3)
With the advice and approval of his or her faculty adviser, the first-year student may choose approved electives offered by the Department of Obstetrics and Gynecology. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the first-year curriculum. Pass-fail only. Prereq: Admission to first year, College of Medicine.

OBG 825 SECOND-YEAR ELECTIVE, OBSTETRICS AND GYNECOLOGY. (1-4)
With the advice and approval of his or her faculty adviser, the second-year student may choose approved electives offered by the Department of Obstetrics and Gynecology. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the second-year curriculum. Pass-fail only. Prereq: Admission to second-year medical curriculum and approval of adviser.

OBG 850-899 FOURTH-YEAR ELECTIVE FOR MEDICAL STUDENTS. (1-6)
With the advice and approval of the faculty adviser and the Student Progress and Promotions Committee, the fourth-year student may choose approved electives offered by the various departments in the College of Medicine. The intent is to provide the student an opportunity to develop his fund of knowledge and clinical competence. Prereq: Admission to the fourth-year, College of Medicine and/or permission of the Student Progress and Promotions Committee.

Approved electives:

OBG 850 GYNECOLOGIC ONCOLOGY
OBG 851 GYNECOLOGIC SUBSPECIALTIES SECONDARY ACTING INTERNSHIP
OBG 852 OBSTETRICS AND GYNECOLOGY INDEPENDENT STUDY
OBG 854 CLINICAL CLERKSHIP IN OBSTETRICS
OBG 855 CLINICAL CLERKSHIP IN GYNECOLOGY
OBG 860 RESEARCH IN GYNECOLOGY
OBG 863 HIGH RISK OBSTETRICS (MFM)
OBG 890 OFF-SITE OBSTETRICS AND GYNECOLOGY

OBI Oral Biology

OBI 650 ORAL BIOLOGY FOR POSTGRADUATE DENTAL STUDENTS I. (2)
This seminar course provides a review of selected biological science topics. Emphasis is placed on the use of current literature for an in-depth study of those aspects of the subject particularly relevant to dental practice. Lecture: 32 hours. Prereq: Admission to an advanced education program of the College of Dentistry or consent of instructor.

OBI 651 ORAL BIOLOGY FOR POSTGRADUATE DENTAL STUDENTS II. (2)
This course is a continuation of OBI 650. It is a seminar that uses the scientific literature to review selected biological science topics with emphasis on those especially relevant to dental practice. Lecture: 32 hours. Prereq: OBI 650 or consent of instructor.

OBI 720 MICROBIAL STRUCTURE AND FUNCTION. (3)
Molecular basis of structure and function in unicellular microbes. Molecular genetic and structural approaches to the analysis of bacterial architecture growth, division, and differentiation. Prereq: (to reflect appropriate IBS course). (Same as MI 720 and BIO 720.)

***OBI 812 DENTAL BIOCHEMISTRY. (6)**
This is a comprehensive course in biochemistry designed to fulfill the specific needs of student dentists. Course content is generally as outlined in the American Association of Dental Schools suggested curriculum guidelines for biochemistry. Part I acquaints students with the chemical constituents of prokaryotic and eukaryotic cells; topics include the chemistry of lipids, carbohydrates, proteins, vitamins and coenzymes, and the nature of enzyme action. Part II integrates the chemical principles learned from Part I with concepts of cell dynamics, structure, function, subcellular organization, and metabolism. Topics include intermediary metabolism, bioenergetics, DNA replication, protein synthesis, and cellular regulatory and control mechanisms. Course content, where possible, is related to current concepts concerning the etiology of oral diseases, their treatment, and prevention to assist student dentists in attaining institutional goals and objectives for clinical competency. Prereq: Admission to the College of Dentistry. (Same as BCH 812.)

OBI 813 NEUROPHYSIOLOGY. (1)
The brain uses electrical signals to process all information it receives and analyzes. Individual neurons encode complex information into simple electrical signals; the meaning behind these signals is derived from the specific interconnections of neurons. The purpose of neurophysiology is to describe how the neuron produces electrical and chemical signals and illustrate how these signals are involved in the functional organization of neural circuits. This course also describes how the central nervous system analyzes and integrates the various inputs, elicits command decisions that determine the motor and/or endocrine responses. Lecture: three hours per week for five weeks. Prereq: Admission to the College of Dentistry, or consent of the Course Director. (Same as PGY 813.)

OBI 814 DENTAL HUMAN FUNCTION. (5)
This course provides in-depth instruction on the physiological mechanisms of body function from the single cell to the organism level. The course is team taught primarily by basic scientists. Teaching methodologies include didactic and Socratic lectures with some dental correlations. Prereq: Admission to the College of Dentistry. (Same as PGY 818.)

OBI 815 DENTAL GROSS ANATOMY AND EMBRYOLOGY. (6)
Study of human gross and developmental anatomy with particular emphasis on functional anatomy of the head and neck. Lecture/laboratory course, with dissection being an essential component of the laboratory portion. 140 hours. Prereq: Admission to the College of Dentistry. (Same as ANA 534.)

OBI 817 DENTAL NEUROANATOMY. (2)
Study of human dental neuroanatomy with emphasis on functional neuroanatomy of central nervous system, especially related to cranial nerves 5, 7, 9, and 10, pain, and long tracts. Lecture, one hour per week. Prereq: Admission to the College of Dentistry.

OBI 826 DENTAL PHARMACOLOGY AND THERAPEUTICS. (4)
This course will provide students with a fundamental understanding of the pharmacology and therapeutic uses of drugs commonly used by their patients and in their practice. Prereq: OBI 812 and OBI 814. (Same as PHA 822.)

***OBI 828 IMMUNITY, INFECTION AND DISEASE FOR THE STUDENT DENTIST. (6)**
The course provides basic concepts of immunology and bacterial, viral, fungal and protozoal biology. It focuses on mechanisms of human immunity, immunologically mediated disease, and pathogenesis in infectious disease. The material covered includes relevant pathology associated with both immunological and infectious diseases, and a summary of infectious diseases from a clinical perspective. Prereq: Enrolled in the DMD curriculum.

OBI 829 ORAL BIOLOGY. (2)
This course will enable the dental student to apply basic oral biology principles to the contemporary diagnosis and treatment of oral disease. Oral biology is the study of the biologic sciences and their clinical correlates that pertain to the mouth and the contiguous tissues in health and disease. Major oral systems are studied at the complete, cellular, and molecular levels with emphasis on important clinical problems affecting both hard and soft tissues. Lecture, 34 hours. Prereq: ANA 530, OBI 812, OBI 814, CDS 820 or consent of instructor.

OBI 836 DENTAL PHARMACOLOGY. (3)
This course will provide students of dentistry with a fundamental understanding of the pharmacology and the therapeutic uses of drugs commonly used in their practice or by their patients. This course will reinforce topics discussed in CDS 821 (Local Anesthesia); in addition, the course will integrate with ODM 830 (Mngmnt of Med Compromised Patient) and provide focused preparation for CDS 831 (Conscious Sedation). Prereq: OBI 812 (Dent Biochem), OBI 814 (Dent Physio), and CDS 821 (Local Anes).

ODM Oral Diagnosis and Oral Medicine

*ODM 810 BASIC PRINCIPLES IN ORAL AND MAXILLOFACIAL RADIOLOGY. (2)

This course presents the basic principles of oral and maxillofacial radiology, including radiation biology, radiation physics and Imaging Principles, radiation protection and safety, and radiology techniques. Prereq: Admission to the College of Dentistry.

ODM 814 ORAL DIAGNOSIS/ORAL MEDICINE AND TREATMENT PLANNING. (2)

This course is designed to prepare the student dentists to do overall patient evaluation which would include medical history, dental history, social history, family history and to understand the significance of proper head and neck examination which would ultimately help them in diagnosis and treatment planning. It will also help them in understanding the different needs and extra precautions needed for certain medically complex patients and special needs patients and hands on clinical training in patient examination. It will consist of lectures, stimulated case presentations, hands on clinical examination training in groups, self-practice time and handouts. Prereq: 1st Year University of Kentucky, College of Dentistry student.

*ODM 820 ORAL AND MAXILLOFACIAL RADIOLOGY AND DIAGNOSTIC IMAGING. (2)

This course presents the principles of radiographic anatomy, extra-oral projections (including panoramic film and lateral skull film), radiology of caries and periodontal disease, digital radiology, advanced imaging techniques (including CBTC), and the process of radiographic interpretation. Prereq: ODM 810.

*ODM 821 CLINICAL ORAL DIAGNOSIS I. (1)

This course consists of two components: 1) examination, diagnosis, and treatment planning for patients assigned to dental students in general clinics; and 2) an emergency clinic assignment in which the students will diagnose and treat patients with acute oral problems. Prereq: CDS 815; Coreq: CDS 824.

*ODM 830 MANAGEMENT OF THE MEDICALLY COMPROMISED DENTAL PATIENT. (3)

This course will provide students with the knowledge required to manage medically compromised patients in the outpatient dental office. Basic clinicopathological information about commonly occurring medical disorders, the impact medications that these patients take have, the special problems they have, and their effects on dental health care will be presented. Critical thinking is encouraged so that the students can use their diagnostic skills in the appropriate manner to identify and manage patients with systemic disorders. Prereq: Approval of dean and/or his designee for academic affairs and the course director.

*ODM 831 CLINICAL ORAL DIAGNOSIS II. (2)

This course is a continuation of ODM 821 and also consists of two components: 1) examination, diagnosis and treatment planning for patients assigned to dental students in general clinics; and 2) emergency clinic assignments in which the students will diagnose and treat patients with acute oral problems. Prereq: ODM 821; coreq: ODM 830.

*ODM 841 CLINICAL ORAL DIAGNOSIS III. (1)

This course is a continuation of ODM 831 and also consists of two components: (1) examination, diagnosis and treatment planning for patients assigned to dental students in general clinics; and (2) emergency clinic assignments in which the students will diagnose and treat patients with acute oral problems. Prereq: ODM 830 and ODM 831.

OFF Orofacial Pain

OFF 634 CURRENT CONCEPTS IN TEMPOROMANDIBULAR DISORDERS. (3)

This course provides the student with information on the anatomy, physiology and function of the masticatory system. The etiology, diagnosis and treatment of temporomandibular disorders will be emphasized. Lecture, 41 hours; laboratory, 15 hours per semester. Prereq: Acceptance into the College of Dentistry M.S. Program and/or consent of the College of Dentistry's Director of Graduate Studies and the course director.

OFF 636 CLINICAL MANAGEMENT OF TEMPOROMANDIBULAR DISORDERS. (3)

This course provides the student with clinical experience in the diagnosis and management of temporomandibular disorders. The student will provide treatment for patients referred to the Orofacial Pain Center under the supervision of the course director. Clinic, 144 hours. Prereq: Acceptance into the College of Dentistry M.S. Program and/or consent of the College's Director of Graduate Studies and the course director.

OFF 700 OROFACIAL PAIN TREATMENT PLANNING SEMINAR. (2)

This course will provide the student with experience in diagnosing and treatment planning various orofacial pain patients. Lecture: 32 hours per year or 16 hours per semester. Prereq: Acceptance into the College of Dentistry M.S. Program and/or consent of the College's Director of Graduate Studies and the course director.

OFF 734 CURRENT CONCEPTS IN OROFACIAL PAIN. (3)

This course provides the students with information on non-masticatory orofacial pain problems. The etiology and differential diagnosis of head and neck pain will be emphasized. The student will learn the dentist's role in the management and/or referral of complex facial pain problems. Prereq: OFF 634 and OFF 636.

OFF 736 CLINICAL MANAGEMENT OF OROFACIAL PAIN. (3)

This course provides the student with clinical experience in the diagnosis and management of complex orofacial pain problems. The student will provide treatment for patients referred to the Orofacial Pain Center under the supervision of the course director. Clinic, 144 hours. Prereq: OFF 634 and OFF 636.

OFF 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be requested to a maximum of six (6) semesters. Prereq: All course work toward the degree must be completed.

OFF 768 RESIDENT'S CREDIT FOR MASTER'S DEGREE. (1-6)

May be repeated for a total of 12 hours. Prereq: Admission to the Orofacial Pain graduate program and consent of the Director of Graduate Studies.

OFF 790 RESEARCH IN OROFACIAL PAIN. (1-6)

This course provides credit hours for the graduate students' independent research efforts. May be repeated to a maximum of 12 hours. Prereq: Admission to the Orofacial Pain Graduate Program and consent of the Director of Graduate Studies in the College of Dentistry.

OHP Oral Health Practice

*OHP 850 INDEPENDENT WORK IN ORAL HEALTH PRACTICE. (1-3)

An elective course offered by the department of Oral Health Practice. Students may work on individual projects in one or more of the disciplines encompassed by this department under the direction of a faculty member. Prereq: Specific course prerequisites and year in dental school will depend on the nature of the proposed project; consent of instructor.

OHS Oral Health Science

OHS 850 INDEPENDENT WORK IN ORAL HEALTH SCIENCE. (1-3)

An elective course offered by the department of Oral Health Science. Students may work on individual projects in one or more of the disciplines encompassed by this department under the direction of a faculty member. The work should involve independent laboratory or clinical research and include supporting literature searches. The end result should be either a table clinic presentation or a paper suitable for publication. The minimum number of hours to be spent on the project and the means of evaluation will be decided before beginning the project. May be repeated to a maximum of 12 credits. Prereq: Specific course prerequisites and year in dental school will depend on the nature of the proposed project; consent of instructor.

OPH Ophthalmology

OPH 815 FIRST-YEAR ELECTIVE, OPHTHALMOLOGY. (1-3)

With the advice and approval of his or her faculty adviser, the first-year student may choose approved electives offered by the Department of Ophthalmology. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the first-year curriculum. Pass-fail only. Prereq: Admission to first year, College of Medicine.

OPH 825 SECOND-YEAR ELECTIVE, OPHTHALMOLOGY. (1-4)

With the advice and approval of his or her faculty adviser, the second-year student may choose approved electives offered by the Department of Ophthalmology. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the second-year curriculum. Pass-fail only. Prereq: Admission to second-year medical curriculum and approval of adviser.

OPH 850-899 FOURTH-YEAR ELECTIVE FOR MEDICAL STUDENTS. (1-6)

With the advice and approval of the faculty adviser and the Student Progress and Promotions Committee, the fourth-year student may choose approved electives offered by the various departments in the College of Medicine. The intent is to provide the student an opportunity to develop his fund of knowledge and clinical competence. Prereq: Admission to the fourth year, College of Medicine and/or permission of the Student Progress and Promotions Committee.

Approved electives:

OPH 850 CLINICAL CLERKSHIP IN OPHTHALMOLOGY
 OPH 851 RESEARCH IN OPHTHALMOLOGY
 OPH 852 ADVANCED CLINICAL CLERKSHIP IN OPHTHALMOLOGY
 OPH 890 OPHTHALMOLOGY OFF-SITE

OPT Oral Pathology

OPT 650 GRADUATE ORAL PATHOLOGY I. (2)
 This is a seminar course in advanced oral pathology in which students study the microscopic, radiographic, and clinical features and the management of diseases that affect oral and perioral tissues. A case study format is used to discuss both common and rare conditions that illustrate all major disease categories and to provide a framework for developing a systematic approach to disease diagnosis. Lecture: 36 hours. Prereq: Dental degree and enrollment in a College of Dentistry postgraduate program, or consent of instructor.

OPT 651 GRADUATE ORAL PATHOLOGY II. (2)
 This course is a continuation of OPT 650. It is a seminar in advanced oral pathology in which students study the microscopic, radiographic, and clinical features and the management of diseases that affect oral and perioral tissues. A case study format is used to discuss both common and rare conditions that illustrate all major disease categories and to provide a framework for developing a systematic approach to disease diagnosis. Lecture: 36 hours. Prereq: OPT 650 or consent of instructor.

OPT 820 GENERAL PATHOLOGY FOR STUDENT DENTISTS. (3)
 This basic course covers general pathology, which will prepare the student dentist to concentrate on the specialized area of oral pathology. Emphasis is placed on cell damage, inflammation and repair, neoplasia and hemostasis, as well as the in-depth study of selected systemic diseases that may affect dental patient management. Prereq: Enrollment in the College of Dentistry and second year class standing, ANA 530, ANA 534, or consent of course director.

***OPT 830 ORAL PATHOLOGY I. (3)**
 This is a comprehensive lecture course on oral and paraoral diseases. The course deals mainly with the clinical aspects of oral disease, with emphasis on clinical and/or radiographic appearance, etiology, management and prognosis. Prereq: OPT 820.

***OPT 832 ORAL PATHOLOGY II. (1)**
 This course teaches the dental student an effective approach to patients with oral lesions. It will stress the following: development of a reasonable differential diagnosis list, procedures to be used in obtaining a definitive diagnosis, management of the patient after a diagnosis has been made, and treatment if indicated. Prereq: OPT 830.

***OPT 840 ORAL PATHOLOGY III. (1)**
 This is an advanced course in oral pathology in which various diseases and abnormal conditions of the head, neck, and oral cavity are presented. The pertinent information on several selected cases will be available online and posted in a display case for a week. Subsequently, an associated seminar will concentrate on the development of a differential diagnosis, establishment of a definitive diagnosis, and discussion of treatment and prognosis. Prereq: OPT 832.

***OPT 850 ORAL PATHOLOGY ELECTIVE. (1-10)**
 Elective courses offered by the Department of Oral Pathology provide opportunities for further study of or experience in various aspects of oral pathology. Prereq: The minimum year in dental school and any course prerequisites will be announced for each topic.

OR Operations Research

OR 524 PROBABILITY. (3)
 Sample space, random variables, distribution functions, conditional probability and independence, expectation, combinatorial analysis, generating functions, convergence of random variables, characteristic functions, laws of large numbers, central limit theorem and its applications. Prereq: MA 213 and MA 322. (Same as STA 524.)

OR 525 INTRODUCTORY STATISTICAL INFERENCE. (3)
 Simple random sampling, statistics and their sampling distributions, sampling distributions for normal populations; concepts of loss and risk functions; Bayes and minimax inference procedures; point and interval estimation; hypothesis testing; introduction to nonparametric tests; regression and correlation. Prereq: STA 320 or STA 524 or consent of instructor. (Same as STA 525.)

OR 624 APPLIED STOCHASTIC PROCESSES. (3)
 Definition and classification of stochastic processes, renewal theory and applications, Markov chains, continuous time Markov chains, queuing theory, epidemic processes, Gaussian processes. Prereq: STA 524 or STA 623 or consent of instructor. (Same as STA 624.)

ORT Orthodontics

ORT 610 CRANIO-FACIAL FORM. (2)
 This is a two credit-hour seminar course that introduces students to the basic concepts and principles of cephalometrics in orthodontic diagnosis and treatment. The course reviews historical literature as well as contemporary articles. Prereq: Admission to graduate dental programs; D.D.S. or D.M.D. degree.

ORT 620 ORAL-PHARYNGEAL FUNCTION, PART I. (2)
 Basic and applied physiology for graduate students in dentistry. Class, two and one-half hours. Prereq: Admission to a graduate program of the College of Dentistry; D.D.S. or D.M.D. degree.

ORT 621 ORAL-PHARYNGEAL FUNCTION, PART II. (2)
 A continuation of ORT 620, emphasizing speech physiology and language development. Lecture, two and one-half hours. Prereq: Admission to a graduate program of the College of Dentistry; D.D.S. or D.M.D. degree.

ORT 660 ORTHODONTIC DIAGNOSIS. (2)
 This is a two credit-hour seminar course offered at the graduate level within the specialty program in orthodontics. The course provides in-depth information concerning methods and rationale for gathering a comprehensive database for orthodontic patients. Analysis and interpretation of the database is approached by using the orthogonal analysis technique. The process of developing a treatment plan from the database will be thoroughly explored. Prereq: Admission to a postdoctoral program of the College of Dentistry.

ORT 661 ORTHODONTIC SEMINAR-CLINIC. (3)
 Seminar, laboratory and clinical instruction in orthodontic theory and practice. Lecture, three hours; laboratory, 15 hours. May be repeated to a maximum of 12 credits. Prereq: ORT 660.

ORT 662 ORTHODONTIC TECHNIQUE. (2)
 This is a two credit-hour graduate level course designed to introduce or reacquaint the student with some of the most commonly used techniques in orthodontic practice. It is closely related to the diagnosis and treatment planning course and to the course on mechanics. Prereq: Admission to a postdoctoral program of the College of Dentistry.

ORT 664 BIOMECHANICS. (2)
 This is a two-credit-hour seminar course. The purpose of the course is to introduce the foundational concepts for understanding both the laws of mechanics and the typical tissues responses to force systems used in orthodontic appliances. Students will learn theory-guided approaches to planning safe, predictable and efficient orthodontic treatment. Students will be expected to read and critique material in assigned textbooks and journal articles for seminar discussions. This course will supplement subject matter covered in the typodont course, ORT 662. Prereq: Admission to a postdoctoral program in the College of Dentistry.

ORT 710 MANAGEMENT OF COMPLEX OROFACIAL DEFORMITIES. (1)
 Seminar discussions of techniques in orthodontic problem solving and planning treatment for patients with orofacial deformities refractory to either orthodontic therapy or oral surgery but which are resolvable by utilizing combinations of orthodontic and oral surgical therapies. Lecture, one hour per week; laboratory, one hour per week. Prereq: ORT 660 or permission of instructor.

ORT 748 MASTER'S THESIS RESEARCH. (0)
 Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

ORT 768 RESIDENCE CREDIT FOR MASTER'S DEGREE. (1-6)
 Maximum of nine weeks residence credit. Prereq: Admission to the orthodontic graduate program of the College of Dentistry or consent of instructor.

ORT 770 ORTHODONTIC SEMINAR. (1)
 Seminar in orthodontic theory and practice for advanced graduate and postdoctoral students in orthodontics. May be repeated to a maximum of six credits. Lecture, three hours. Prereq: Admission to the Orthodontics Graduate Program and consent of course director.

ORT 790 RESEARCH IN ORTHODONTICS. (1-5)
 Research in orthodontics. May be repeated to a maximum of five credits. Prereq: Admission to the orthodontic graduate program of the College of Dentistry; special permission.

***ORT 822 ORTHODONTICS. (3)**
 This is a lecture and laboratory course in which the knowledge and skills needed to conduct a thorough orthodontic diagnosis and to plan orthodontic therapy are developed. In addition, the principles of orthodontic mechanotherapy are introduced and the role the general dentist plays in maintaining healthy occlusion is defined. Early lectures are oriented to data base collection, analysis and interpretation. The course provides opportunity to develop skills in analysis of facial proportions, analysis of diagnostic dental casts, cephalometric tracings, formulating a prioritized problem list, and development of long term and short term treatment goals. As the semester progresses, focus shifts to give the student a basic understanding of the skills required to fabricate fixed and removable appliances that are typically indicated for limited tooth movement and retention in interceptive orthodontics and adjunctive orthodontic treatment in a general practice setting. The role of the general dentist in the management of their patients' orthodontic needs will be delineated. Special emphasis will be placed on coordination of treatment between the specialist and general practitioner and maintenance of occlusion over

the life span of the patient. The role of orthodontic treatment in a multidisciplinary approach will be discussed. Finally, new technology emerging on the horizon in clinical orthodontics will be explored. Prereq: Students must have second year standing in the College of Dentistry and have passed CDS 812. Otherwise, special permission of the course director is required.

***ORT 841 CLINICAL ORTHODONTICS. (1)**

This clinical course requires the students to analyze and diagnose the present and developing occlusal disharmonies in their assigned patients and to provide therapy for those patients who need tooth movements judged to be within the scope of the general practice of dentistry. Prereq: ORT 822 and consent of course director.

***ORT 850 ORTHODONTIC ELECTIVE. (1-10)**

Elective courses offered by the Department of Orthodontics provide opportunities for further study of or experience in various aspects of orthodontics. Topics may include principles of comprehensive orthodontic treatment, types of orthodontic appliances, and methods of correcting facial skeletal problems. Prereq: Minimum year in dental school and any course prerequisites will be announced for each topic.

OSG Oral and Maxillofacial Surgery

OSG 651 ANATOMICAL RELATIONSHIPS IN SURGERY. (1)

A seminar course for dental graduate students in areas other than surgery, emphasizing anatomical and surgical principles applicable to all dental specialties. Prereq: Admission to graduate or post-doctoral programs of College of Dentistry; D.D.S. or D.M.D. degree.

***OSG 820 ORAL SURGERY I. (1)**

This course is designed to introduce the student to principles of surgery and to prepare them for their clinical rotations. Emphasis is placed not only on the technical aspects of surgery, but also on the integration of basic sciences to form a scientific basis for the clinical practice of surgery.

***OSG 830 ORAL SURGERY II. (1)**

This course is an overview of the specialty of oral surgery. The student is introduced to the surgical management of congenital and acquired abnormalities of the oral structures and associated parts. Management of odontogenic infection, cysts and tumors is presented, as well as the role of the dentist in the care of head and neck cancer patients. The diagnosis and management of facial fractures also are presented, particularly as they relate to the general practitioner. This course may be taken up to 4 times in the same or different terms for a total of 4 x the listed credit hours. Prereq: OSG 820 or consent of course director.

***OSG 831 ORAL SURGERY ROTATION I. (1)**

This course teaches the management of the ambulatory oral surgical patient. It includes patient evaluation, control of pain and anxiety, performance of minor oral surgical procedures, treatment of acute and chronic oral infections and of complications associated with oral surgery, and the use of the problem-oriented record. Slide-text programs and reading assignments supplement the outpatient clinical experience. Prereq: CDS 821 and OSG 820 or consent of course director.

***OSG 841 ORAL SURGERY ROTATION II. (2)**

In this course students learn the management of oral surgical patients in a hospital. It consists of a full-time rotation on the oral surgery hospital service, including standing in-hospital night call with the oral surgery house staff. Students assist in patient care and perform procedures such as exodontia and biopsy. Oral surgical management of comprehensive care patients in the outpatient clinic is also included. Prereq: OSG 830 and OSG 831.

***OSG 850 ORAL SURGERY ELECTIVE. (1-10)**

Oral Surgery provide opportunities for further study of or experience in various aspects of oral surgery. Topics may include hospitalized and ambulatory patient management, emergency care, operating room experience, pain and anxiety control, and surgical technique. Prereq: Minimum year in dental school and any course prerequisites will be announced for each topic.

OTH Orthopedics

OTH 856 ORTHOPEDICS FOR THE PRIMARY CARE PHYSICIAN. (4)

Students will spend time in sports medicine orthopedic clinic, two-and-a-half days a week, observing in the operating room a half day a week and half day a week working with physical therapists in the clinical setting or athletic trainers at the high school. Each student will have the opportunity to evaluate and treat patients under the supervision of the attending physician. Students will attend and participate in didactic interactive sessions at weekly sports medicine conferences and on campus at orthopedic conferences one afternoon per week. Prereq: Successful completion of all third year clerkships; priority will be given to those students not pursuing orthopedics training, or those already signed up for an orthopedics AI.

PA Public Administration

PA 602 STRATEGIC PLANNING AND ORGANIZATIONAL CHANGE IN THE PUBLIC AND NONPROFIT SECTORS. (3)

This course focuses on the potential for change and future directions for public and nonprofit organizations. It covers the basics of strategic planning for organizations providing public value and operating in a political context. It addresses such topics as environmental assessments, stakeholder analysis, identification of strategic issues, strategy formulation and implementation, performance measurement and evaluation, and key features of organizational change processes. Prereq: PA 621 and PA 651.

PA 621 QUANTITATIVE METHODS OF RESEARCH. (3)

A survey of behavioral science research methods for the public administrator. Emphasis is placed upon problem selection and identification, research design, and data analytic techniques. Lecture, two hours; laboratory, one hour per week. Prereq: MPA or MHA program status.

PA 622 PUBLIC PROGRAM EVALUATION. (3)

This course is designed to provide students with the conceptual and analytical tools to evaluate the effectiveness of public programs and policies. The focus will be on program monitoring and evaluation. Of particular concern will be program process and outcome measurement; quasi-experimental design; multiple regression analysis; and analysis of variance models. Prereq: PA 621.

PA 623 DECISION ANALYSIS AND DECISION SUPPORT SYSTEMS. (3)

An introduction to organizational decision making under conditions of certainty, uncertainty, risk and multiple objectives. Concepts of analysis from the areas of economics, mathematics, probability, and statistics will be utilized in terms of administrative decision making in public administration. Course work includes use of various management information systems with a focus on how such systems can be used to support and inform decision making. Lecture, two hours; laboratory, one hour per week. Prereq: PA/HA 621, PUAD or HLAD program status or consent of instructor.

PA 624 GOVERNMENT INFORMATION SYSTEMS. (3)

Provides an overview of information strategies and management approaches to government functions and public policy programs. It illustrates and analyzes the interaction between information technology and information systems with management and policy decisions in the public and non-nonprofit sectors by using large data. Prereq: MPA or MPP program status.

PA 625 GOVERNMENTAL ACCOUNTING AND FINANCIAL CONDITION ANALYSIS. (3)

The course will examine the characteristics of governmental and nonprofit accounting emphasizing the various fund types and account groups, review and evaluation of presently recommended accounting and financial reporting procedures (GAAP) and an exploration of practical governmental and nonprofit accounting practices and methods. The course will introduce students to public financial accounting concepts and how to apply governmental (fund) and not-for-profit accounting theory to accounting and reporting for state and local governments and other non-profit institutions.

PA 626 APPLICATIONS IN GOVERNMENTAL ACCOUNTING AND AUDIT. (3)

Students will gain hands-on experience with case studies designed to simulate real-world scenarios and common problems in today's public sector. This course goes beyond the theory and will demonstrate how to navigate the key issues that arise in governmental and not-for-profit accounting and auditing, expanding on concepts developed in PA 671. Prereq: PA 625.

PA 627 GOVERNMENTAL AUDIT. (3)

This course focuses on components of the governmental audit process unique to the public sector. Students will gain an understanding of the Government Auditing Standards (GAGAS), types of audits, the role of audit objectives and audit evidence, the fundamentals of interviewing, the preparation of audit working papers, as well as how to interpret audit findings and elements based on qualitative and quantitative evidence and communicate those findings to non-financial audiences.

PA 631 PUBLIC FINANCIAL MANAGEMENT. (3)

An analysis of budget structure and process; revenue structure and administration; and public capital acquisition and debt management. This course emphasizes an applied focus and comparative analysis of alternative budget, revenue, and debt management structures and strategies. Prereq: PUAD or PUAM program status or consent of instructor.

***PA 632 PUBLIC FUNDS MANAGEMENT. (3)**

A study of the management of public funds including the accumulation, management and investment of such funds and the accounting for those transactions. It will also include topics such as fund accounting, cash forecasting, cash management practices and public funds investment strategies.

PA 633 MUNICIPAL SECURITIES. (3)

An analysis of the theoretical and operational issues associated with the municipal securities industry. Prereq: PA 632 or the equivalent and Ph.D. or M.P.A. program status or consent of instructor.

PA 636 HEALTH ECONOMICS. (3)

This course applies general theoretical principles of economics to the health care sector. The basic approach is to recognize the importance of scarcity and incentives, allowing for

differences peculiar to health. The demand and supply of health and medical care are examined as they involve physicians, nurses and hospitals. The competitiveness of their markets, health insurance and the role of government are explored. Special topics include regulation and planning, benefit-cost analysis, and reform health plans. Prereq: The economics prerequisite can be met in three ways: (a) an undergraduate principles course in microeconomics and HA/PA 652; (b) an undergraduate microeconomics principles course and a graduate course in managerial economics; or (c) an undergraduate microeconomics principles course and an intermediate microeconomics course. (Same as ECO 653.)

PA 642 PUBLIC AND NONPROFIT ORGANIZATION THEORY AND BEHAVIOR. (3)

A course which examines the interaction of both external and internal resources and constraints upon the administrative decision processes in a number of public organizational settings. The objective is an understanding of the practice of administration in public organizations. Prereq: MPA/MHA program status.

PA 651 THE POLICY PROCESS. (3)

Broad-based course in public policy formulation and social planning. Emphasis is on the parameters of policy formulation as well as the social planning and impact variables. Both policy processes and relevant content areas will be stressed. Prereq: MPA program status.

PA 652 PUBLIC POLICY ECONOMICS. (3)

Principles and practices of economical resource management in the governmental sector: tax and expenditure types, intergovernmental fiscal cooperation, debt financing, budgeting and financial planning. Prereq: ECO 201 or equivalent and MPA or MPP program status or permission of department. (Same as ECO 652.)

PA 653 LOCAL ECONOMIC DEVELOPMENT. (3)

The course develops the capacity to employ the theories, practices and philosophies of economic development as applied to local areas. The primary geographic focus of the course is the rural south-east of the United States, but examples will be drawn from rural areas in other developed countries. Prereq: Graduate status in agricultural economics, public administration, economics, or consent of instructor. (Same as AEC 653.)

PA 660 PUBLIC POLICY OF THE NONPROFIT SECTOR. (3)

This course offers an overview of practical, legal, ethical, and theoretical issues faced by the nonprofit sector and organizations that exist today and over time.

PA 661 FINANCIAL MANAGEMENT OF NONPROFIT ORGANIZATION. (3)

This course explores the techniques and principles of financial management including budgeting, finance, and investment decision making for non-profit orgs.

PA 662 NON-PROFIT MANAGEMENT. (3)

A graduate level management course focusing on the most significant tenets of management, including those that differentiate a non-profit organization from others. Theory and practice will be included. Students will select a non-profit organization to explore and evaluate specific management functions. Prereq: MPA program status or permission of the instructor.

PA 665 PUBLIC POLICY AND POLITICAL ECONOMY IN AN INTERNATIONAL CONTEXT. (3)

The goal of this course is to introduce students to policy analysis and political economy issues in an international setting. This will involve the study of particular aspects of economic policy in individual countries and regions, as well as the development of fundamental principles of economics and political economy which can be used to analyze the impacts of alternative policies and the processes by which policies are made. Prereq: PA 652 or equivalent or consent of the instructor.

PA 667 POLICYMAKING IN AN INTERNATIONAL CONTEXT: POLITICAL AND ORGANIZATIONAL DIMENSIONS. (3)

This class provides students with an understanding of the political systems of and the implementation of policy in nations around the world. We begin by comparing the political systems and the bureaucracies of the U.S. and Canada, which will serve as the backdrop for learning relevant concepts from modern political science and public administration. Having mastered these concepts, we will then use them to examine Mexico, Brazil, the People's Republic of China, India, Japan, Nigeria, Russia, the United Kingdom, Germany, and finally, the European Union as an entity. In all cases, our country studies will focus on who decides on policies and how, and then on how policies are implemented. In selected class sections, the instructor will provide practical information on working in, and with professionals from the countries featured in this class. Prereq: PA 652 or their equivalents or permission of the instructor.

PA 673 HEALTH POLICY. (3)

An analysis of the development and implementation of health policy on a national, state, local and organizational level. The course will focus on issue and policy analysis, formal and informal processes of policy development and the issues, values, and political and community factors affecting policy development and program implementation. Prereq: HA 636, MHA program status or consent of instructor. (Same as CPH 785.)

PA 675 EDUCATION: ECONOMICS AND POLICY. (3)

This course will provide an overview of current policy issues in education. The course will cover basic education policy issues with a particular emphasis on the economics and policy analytic perspectives. Many of the issues will be examined both conceptually and empirically and will expose the student to policy evaluation tools and techniques. We will examine questions such

as why schooling is provided publicly in the U.S., look at ways to evaluate the current quality of schooling, and think about reform alternatives. Prereq: PA 621 and PA 652 or their equivalents or permission of the instructor.

PA 680 BENEFIT-COST ANALYSIS. (3)

Principles, practices and applications of applied welfare analysis are the content of this course. The basic theory of benefit-cost analysis is presented and the relevance of implementation analysis in policy analysis is established. Prereq: PA 652. (Same as ECO 654.)

PA 681 CAPSTONE IN PUBLIC ADMINISTRATION. (3)

This course provides an opportunity for students to integrate their studies with professional practice. Case studies and special projects require students to integrate knowledge from the core curriculum in the analysis of public management and policy problems. Prereq: MPA program status and completion of 33 credit hours.

PA 683 TAX POLICY. (3)

Tax policy is analyzed from an economic perspective: efficiency and distributional effects of taxation, especially in state, local and international contexts. Prereq: PA 652 or equivalent; PUAD program status or permission of instructor.

PA 684 ENVIRONMENTAL POLICY. (3)

This course examines environmental policymaking, primarily in the context of the United States. Consideration will be given to how environmental policy is adopted and implemented in a federal system. In addition, environmental regulations will be evaluated and policy alternatives will be analyzed. This course will take you through the important players in the environmental policy process, the significant factors related to policy development, adoption and implementation and a series of current environmental issues.

PA 690 PUBLIC POLICY ANALYSIS OVERVIEW. (3)

Economic and political foundations of policy analysis are considered in a survey fashion, followed by specific techniques used in the practice of policy analysis. Prereq: Graduate standing and MPA program status.

PA 691 ETHICS AND PUBLIC POLICY. (1)

This course provides an introduction to ethical theory, explores the ethical dimensions of practice in the public sector, and examines ethics in connection with policy development. Prereq: Graduate standing and MPA program status.

PA 692 ECONOMETRICS FOR POLICY ANALYSTS. (3)

Maximum likelihood estimation, ordinary least squares (OLS) regression, instrumental variables (IV) regression, heteroscedasticity-consistent regression, fixed and random effects models, probit, logit and tobit models, and identification and two-state least squares estimation of simultaneous equations models. Prereq: Any undergraduate statistics course. MPA, MPP or PUAD program status for priority registration, other students with permission of instructor. (Same as ECO 692.)

PA 694 PUBLIC PENSIONS AND INSURANCE. (3)

This course provides participants with an in-depth understanding of the conceptual and practical issues involved in the design and implementation of public pensions and insurance programs. The course draws on US state and local data, analysis and trends. It is designed to introduce public financial managers and other stakeholders to approaches for analyzing and administering pension and insurance systems along with institutional reform options. This course comprises interrelated and complementary topics: 1) the framework for public pension plans and employee insurance benefits; 2) pension and insurance plan concepts, identities, and design options; 3) diagnostic techniques, benchmarks and assessment tools to assure compliance and efficiencies; 4) pension and insurance administration, governance and investment management; 5) regulation and supervision; and 6) pension and insurance reform and financial impacts on public entities.

PA 695 DATA AND REVENUE FORECASTING. (3)

This course exposes public sector financial managers, budget officials and other stakeholders to the latest developments in fiscal analysis and revenue forecasting. This course introduces students to the tools to formulate tax budgeting plans. Through the use of lectures, case studies, presentations, etc. students will learn the statistical techniques, forecasting methods and revenue estimation models.

PA 696 LEGAL ISSUES IN PUBLIC FINANCIAL MANAGEMENT. (3)

Public finance law refers to legislation and regulations relating to the financial activities of government or public sector organizations. This topical course is designed to provide the public financial manager insight into the ever-changing legal responsibilities of government activities touching on financing strategies, public/private partnerships as well as employment financial issues and financial data security.

PA 697 SPECIAL TOPICS IN PUBLIC FINANCIAL MANAGEMENT. (3)

The course offers a detailed investigation of contemporary topics in fields of public financial management using cases, articles and guest lectures. Students will be able to draw meaningful conclusions about the efficiency and effectiveness of federal, state and local financial management systems. Topics will include budget reform, changing accounting requirements, internal audit reform, and other issues impacting the ever-changing world of public financial management.

PA 711 INTERNSHIP IN PUBLIC ADMINISTRATION. (3)

Practical field experience in an administrative setting under the direction of an academic and a workplace supervisor. Prereq: MPA program status or consent of instructor.

PA 722 POLICY AND PROGRAM EVALUATION. (3)

This is a doctoral course concerning policy and program evaluation. Major emphasis will be given to specifying the relationship between evaluation and management functions, evaluation concepts and processes and research methods applicable to evaluation systems and processes. Prereq: MKT 762 or PS 671, or equivalent and Ph.D. program status or consent of instructor.

PA 727 ENVIRONMENTAL ECONOMICS, REGULATION AND POLICY. (3)

This course takes a balanced practitioner approach to the problems of the environment and environmental regulation. Efficiency aspects will be developed carefully, so as to provide a background for an extensive coverage of various available alternative policies. Prereq: PA 652 and MPA or economics program status or consent of instructor. (Same as ECO 721.)

PA 731 FISCAL AND BUDGETARY POLICY. (3)

This course examines public budgeting and finance in the public sector. Included is an analysis of economic, managerial, and political approaches to public budgeting and finance. These approaches are then used to analyze several current topics in public finance. Prereq: PA 631 or equivalent, and Ph.D. program status or consent of instructor.

PA 742 THEORY OF PUBLIC ORGANIZATIONS. (3)

This course provides doctoral students an in-depth knowledge of the various aspects of public organization theory. It will attempt to integrate the work on public organizations which is currently spread over the fields of organization theory and behavior, executive and bureaucratic politics and public choice economics. Prereq: PA 642 or equivalent, and Ph.D. program status or consent of instructor.

PA 750 INTRODUCTION TO ECONOMICS FOR PUBLIC POLICY. (3)

Introduction to microeconomic theory and mathematical methods for policy analysis. Prereq: PUAD Master's or Ph.D. program status or permission of the instructor.

PA 751 PUBLIC POLICY FORMULATION AND IMPLEMENTATION. (3)

The major goals of this course are to examine how public issues become policy proposals, how various proposals are filtered into (or out of) the political process, shaped by political institutions and rules, and the process by which policy is implemented. Prereq: PA 651, or equivalent and Ph.D. program status or consent of instructor.

PA 752 THE ECONOMICS OF POLICY ANALYSIS. (3)

This course examines economic approaches to policy analysis. Included is an analysis of the major concepts of economic analysis and their application to a number of policy problems. Prereq: PA 652 and PA 750 or equivalent and Ph.D. program status or consent of the instructor.

PA 754 ADVANCED TOPICS IN PUBLIC FINANCE. (3)

Principles of taxation and expenditure; applications to federal, state, and local policy; fiscal federalism; international public finance. Prereq: PA 752, ECO 701 or permission of the instructor. (Same as ECO 752.)

PA 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

PA 795 SPECIAL TOPICS IN PUBLIC ADMINISTRATION. (1-3)

Analysis of specialized topics in public administration of particular interest to practitioners. May be repeated to a maximum of six credits. Prereq: MPA program status or consent of instructor.

PA 796 INDEPENDENT STUDY IN PUBLIC ADMINISTRATION. (1-3)

Tutorial course of directed readings, discussion, and analysis of special topics on public administration. May be repeated to a maximum of six credits. Prereq: MPA program status and consent of instructor.

PAS Physician Assistant Studies

#PAS 120 CAREERS AS A PHYSICIAN ASSISTANT. (1)

An overview of the Physician Assistant profession(s) including aspects of professional practice, areas of specialization, professional issues and trends, and career paths and opportunities. The course will consist of assignments, lectures and interactive discussions led by faculty and visiting professionals designed to expand students' understanding of the profession(s) and to assist in educational and career planning and discernment. (Same as HHS 120.)

PAS 500 INTEGRATIVE CARE FOR HEALTH SCIENCES. (1-3)

Integrative care involves using the best possible treatments from both complementary/alternative and allopathic medicine, based on the patient's individual needs and condition. The selection of health care providers should be based on good science and this course will introduce students to complementary and alternative health care providers and the practices and beliefs of these practices as well as the scientific evidence in support of these practices. The course integrates successes from both worlds and describe the safest, least invasive, most cost-effective approach while incorporating a holistic understanding of the individual. May be repeated to a maximum of 3 credits (1 credit didactic and up to two credits experiential/research). (Same as AT 500, HS 500, CLS 500, CNU 500, CD 500.)

PAS 610 RESEARCH METHODS AND EPIDEMIOLOGY IN PA STUDIES. (3)

An introductory course designed to introduce students to research applicable to the health care sciences and the field of epidemiology. The course will include a description of the scientific method, research design, measurement techniques, and statistical analysis. Emphasis will be placed on both clinical research and population-based studies. Students will learn how to critically review literature and how to design a research protocol. Prereq: Completion of STA 570, admission to the Physician Assistant Program, or consent of instructor.

#PAS 620 HEALTH CARE DELIVERY IN THE 21ST CENTURY. (3)

The PAS 620 course will be an introduction to healthcare delivery of the 21st century. This course will emphasize characteristics of the United States care delivery system, its relationship to the physician assistant profession, and will include instruction on the care system's historical organization, composition and function. Students will gain perspective on models of care, payment, health care quality, patient safety, health information technology, population and global health care as well as team-based care. Prereq: Acceptance into the PAS Program.

PAS 640 SURVEY OF GERIATRIC MEDICINE. (3)

Overview of physician assistant practice with geriatric patients. Emphasis is placed on the practice of geriatric medicine including the anatomy and physiology of normal aging; pathology of aging; health care aspects of geriatric management; the diagnosis, treatment and prevention of geriatric problems; and research aspects of geriatric practice. Prereq: Admission to the Physician Assistant graduate program or consent of the instructor.

PAS 645 MASTER'S PROJECT. (1)

A 4-week course designed to introduce students to methods of identifying and analyzing a health care delivery issue that can be studied through a scientific literature search. The analysis of the topic and writing of a research paper will occur during the student's clinical clerkships. Prereq: STA 570, PAS 610, completion of the first year of the Physician Assistant graduate program.

PAS 646 MASTER'S PROJECT 2. (2-6)

This variable credit hour course is designed to allow PA students to complete a Master's Project while under the guidance of a faculty advisor. Students will identify a health care issue topic, conduct appropriate library research on the topic, develop a research paper on the topic, and make an oral presentation of their project at the conclusion of the Master of Science in Physician Assistant Studies Program. Students will be responsible for developing appropriate audiovisuals, handouts, etc. for the oral presentation. Prereq: Admission to the Physician Assistant Program.

PAS 650 CLINICAL METHODS. (4)

The PAS 650 course is designed to deliver content specific to the principles of obtaining medical histories as well as performing physical examinations. Further, students will be introduced to health care communication in both a lecture as well as laboratory format.

PAS 651 INTRODUCTION TO THE PA PROFESSION. (2)

This course provides an overview of selected health care delivery issues affecting primary care physician assistants. The first half of the semester is devoted to examination of the history and evolution of the PA profession, current PA practice demographics and regulations, principles of quality assurance, risk management, and medical literature evaluation. The second half of the semester is devoted to the study of the ethical dimensions of PA practice. Topics include moral principles and ethical theories, as well as a series of seminar discussions on contemporary ethical issues confronting primary care providers in the 20th and 21st centuries. Prereq: Enrollment in the Physician Assistant Program.

PAS 653 INTRODUCTION TO HEALTH AND DISEASE. (3)

An overview of the etiology, distribution, and prevention of basic disease processes. Prereq: Enrollment in Physician Assistant Program.

PAS 654 CLINICAL LECTURE SERIES I. (4)

A study of diseases and disorders seen in primary care physician assistant practice. Emphasis is placed on identifying the etiology, clinical presentation, laboratory and x-ray abnormalities, management, and prevention of diseases/disorders of the cardiovascular, pulmonary, renal, gastrointestinal, hematological, endocrine, and neurological systems. Research aspects of selected diseases is also presented. Prereq: Enrollment in the Physician Assistant Studies Program.

PAS 655 PSYCHOSOCIAL FACTORS IN PRIMARY HEALTH CARE. (3)

This course provides a broad overview of the role of psychosocial factors (behavioral, cultural, and environmental) in the nature, cause, course distribution, prevention, and treatment of illness. It develops the student's communication skills for clinical practice and presents psychosocial theories and research, and is organized into four areas: general behavioral concepts, communications skills, developmental issues, and psychopathology. Prereq: Enrollment in the Physician Assistant Program.

PAS 656 PATIENT EVALUATION AND MANAGEMENT. (4)

The PAS 656 course is combination of lecture, formal presentations, laboratory practice sessions, and supervised patient care experiences involving patient evaluation and management skills. Prereq: Enrollment in Physician Assistant Program or consent of instructor.

PAS 657 CLINICAL LABORATORY PROCEDURES. (3)

This is a survey laboratory course covering common laboratory procedures performed in the primary care clinical setting. Emphasis will be placed on performing and interpreting basic clinical tests. Lecture, two hours; laboratory, two hours per week. Prereq: Enrollment in the Physician Assistant Studies Program.

PAS 658 CLINICAL LECTURE SERIES II. (4)

A seminar in diseases and disorders seen by primary care physician assistants. Emphasis is placed on student research and presentation of selected diseases/disorders associated with orthopedics, dermatology, emergency medicine, pediatrics, and obstetrics and gynecology. Prereq: Enrollment in the Physician Assistant Program.

PAS 660 FAMILY MEDICINE CLERKSHIP. (3)

This is an eight-week clinical course designed to provide physician assistant students with experience in evaluation and treating common problems encountered in Family medicine. Experience is provided at the level of a primary care physician assistant, and emphasis is placed on performing a history and physical exam, selecting and interpreting laboratory exams, establishing a logical differential diagnosis, conducting research on clinical problems, performing selected studies, and establishing a tentative treatment plan. Prereq: Enrollment in the Physician Assistant program and successful completion of the didactic portion of the curriculum.

PAS 661 PEDIATRIC CLERKSHIP. (3)

This is a four-week clinical course designed to provide physician assistant students with experience in evaluation and treating common problems encountered in pediatrics. Experience is provided at the level of a primary care physician assistant, and emphasis is placed on performing a pediatric history and physical exam, selecting and interpreting laboratory exams, establishing a logical differential diagnosis, conducting research on pediatric problems, performing selected procedures, and establishing a tentative treatment plan. Prereq: Enrollment in the Physician Assistant program and successful completion of the didactic portion of the PA curriculum.

PAS 662 OBSTETRICS AND GYNECOLOGY CLERKSHIP. (3)

This is a four-week course designed to provide physician assistant students with experience in evaluating and treating common problems encountered in obstetrics and gynecology. Experience is provided at the level of a primary care physician assistant, and emphasis is placed on performing a prenatal history and physical exam, assisting in surgery, selecting and interpreting laboratory exams, establishing a logical differential diagnosis, conducting research on clinical problems, performing selected studies, and establishing a tentative treatment plan. Prereq: Enrollment in the Physician Assistant program and successful completion of the didactic portion of the PA curriculum.

PAS 663 SURGERY CLERKSHIP. (3)

This is a four-week clinical course designed to provide physician assistant students with experience in evaluating and treating surgical problems. Experience is provided at the level of a primary care physician assistant, and emphasis is placed on performing a surgical history and physical exam, assisting in surgery, selecting and interpreting laboratory exams, establishing a logical differential diagnosis, conducting research on surgical problems, and performing selected surgical procedures. Prereq: Enrollment in the Physician Assistant program and successful completion of the didactic portion of the PA curriculum.

PAS 664 GERIATRIC CLERKSHIP. (3)

A 4-week physician assistant clinical clerkship in geriatric medicine. Objectives involve the development of knowledge and skills in the evaluation, management, and prevention of common geriatric disorders and diseases. Principles of business management, evidence-based medicine, research, and use of ancillary medical services are also covered. Prereq: Admission to the Physician Assistant graduate program, or consent of instructor.

PAS 665 CLINICAL PRACTICUM IN PHYSICIAN ASSISTANT STUDIES. (1-6)

This field assignment offers supervised clinical experience appropriate to the PA student's chosen area of practice. May be repeated to a maximum of 12 credits; 40 hours per week. Prereq: Enrollment in Physician Assistant Program.

PAS 669 INTERNAL MEDICINE CLERKSHIP. (6)

This is an eight-week clinical course designed to provide physician assistant students with experience in evaluating and treating common problems encountered in Internal Medicine. Experience is provided at the level of a primary care physician assistant, and emphasis is placed on performing a history and physical exam, selecting and interpreting laboratory exams, establishing a logical differential diagnosis, conducting research on clinical programs, performing selected studies, and establishing a tentative treatment plan. Prereq: Enrollment in the Physician Assistant program and successful completion of the didactic portion of the PA curriculum.

PAS 670 EMERGENCY MEDICINE CLERKSHIP. (3)

This is a four-week clinical course designed to provide physician assistant students with experience in evaluating and treating problems encountered in emergency medicine. Experience is provided at the level of a primary care physician assistant, and emphasis is placed on performing a history and physical exam, selecting and interpreting laboratory exams, establishing a logical differential diagnosis, performing selected studies, and establishing a tentative treatment plan. Prereq: Enrollment in the Physician Assistant program and successful completion of the didactic portion of the curriculum.

PAS 671 PSYCHIATRIC CLERKSHIP. (3)

This is a four-week clinical course designed to provide physician assistant students with experience evaluating and treating common problems encountered in psychiatry. Experience is provided at the level of a primary care physician assistant, and emphasis is placed on performing a history and physical exam, mental status exam, selecting and interpreting laboratory exams, establishing a logical differential diagnosis, and establishing a tentative treatment plan. Prereq: Enrollment in the Physician Assistant program and successful completion of the didactic portion of the PA curriculum.

PAS 672 PHARMACOLOGY I. (3)

This course is designed to prepare students for the pharmacological requirements of practice as a primary care physician assistant. Emphasis is placed on a description of drug categories, prescription writing, drug abbreviations and equivalents, principles of drug research, and the laws on ethics of drug use in primary care medicine. Prereq: Enrollment in the Physician Assistant Program.

PAS 673 PHARMACOLOGY II. (3)

This course is designed to prepare students for the pharmacological requirements of practice as a primary care physician assistant. Emphasis is placed on utilizing specific drugs and drug combinations for specific diseases, and performing literature reviews on current pharmacological problems. A research paper and presentation is required addressing a specific pharmacological problem that occurs in primary care physician assistant practice. Prereq: Enrollment in the Physician Assistant Program.

PAS 678 HEALTH PROMOTION AND DISEASE PREVENTION. (2)

This course is designed to focus on health promotion and disease prevention in primary care medical practice. The course reflects concerns expressed in Healthy People 2010 which call for an increased emphasis on preventive medicine and reflects the need for additional disease education for physician assistant students. The course will address topics such as immunizations, genetic counseling, complementary and alternative medicine, and health and wellness. Prereq: Enrollment in the Physician Assistant Program.

PAS 680 SEMINAR IN PHYSICIAN ASSISTANT STUDIES. (2)

A study of selected topics and contemporary issues regarding physician assistant practice. Emphasis will be placed on review of selected clinical medicine topics, research in primary care, principles of managed care, job searches and interviewing skill. Prereq: Enrollment in the Physician Assistant program and successful completion of the didactic portion of the PA curriculum.

PAS 690 PA CLERKSHIP. (3-6)

This variable credit, 1 to 2 month course is intended to allow MPAS students with a prior baccalaureate degree in PA studies to engage in clinical work relevant to their chosen area of concentration. Course objectives will be developed to include acquiring knowledge in clinical knowledge and library research. It is expected that students will use this course to develop and implement their final Master's Project. Students will be responsible for developing appropriate audiovisuals, handouts, and other presentation materials. Prereq: Completion of PAS 645, admission to the Physician Assistant Program, or consent of instructor.

PAT Pathology

PAT 815 FIRST-YEAR ELECTIVE, PATHOLOGY. (1-3)

With the advice and approval of his or her faculty adviser, the first-year student may choose approved electives offered by the Department of Pathology. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the first-year curriculum. Pass-fail only. Prereq: Admission to first year, College of Medicine.

PAT 823 MECHANISMS OF DISEASE AND TREATMENT/PATHOLOGY. (9)

This is a course in basic mechanisms of disease causation and specific diseases of the organ systems. It introduces fundamental disease processes and the pathophysiology of major diseases affecting each of the organ systems. It stresses how disease alters normal structure and function and is closely integrated with PAT 824. Various teaching methodologies utilized include lectures, small group discussions, workshops, case studies, and computer-assisted instruction. Lecture, 20 hours per week. Prereq: Admission to second year of medical curriculum.

PAT 825 SECOND-YEAR ELECTIVE, PATHOLOGY. (1-4)

With the advice and approval of his or her faculty adviser, the second-year student may choose approved electives offered by the Department of Pathology. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the second-year curriculum. Pass-fail only. Prereq: Admission to second-year medical curriculum and approval of adviser.

PAT 850-899 FOURTH-YEAR ELECTIVE FOR MEDICAL STUDENTS. (1-6)

With the advice and approval of the faculty adviser and the Student Progress and Promotions Committee, the fourth-year student may choose approved electives offered by the various departments in the College of Medicine. The intent is to provide the student an opportunity to develop his fund of knowledge and clinical competence. Prereq: Admission to the fourth year, College of Medicine and/or permission of the Student Progress and Promotions Committee.

Approved electives:

PAT 850 AUTOPSY PATHOLOGY
PAT 851 SURGICAL PATHOLOGY
PAT 856 FORENSIC PATHOLOGY

PCE Peace Studies

PCE 201 INTRODUCTION TO PEACE STUDIES. (3)

The course reviews a wide range of theories exploring the nature and causes of conflict, the possibilities for conflict resolution, and the foundations of peace. It provides students with a set of tools for the analysis of contemporary conflicts and shows how evidence and theory can be effectively used to understand peace and conflict. The course draws on a wide range of disciplines, including sociobiology, anthropology, sociology, social psychology, economics, and political science. It also gives students a practical understanding of the strengths and weaknesses of current approaches to conflict resolution and peace-building.

PCE 410 PEACE STUDIES CAPSTONE SEMINAR. (3)

PCE 410 is designed to provide a "capstone" or conclusion to the Peace Studies certificate program. Its objective is to provide an opportunity to conduct independent research on a Peace Studies theme and area selected by the student so that s/he integrates the linkages between the themes, areas, and disciplinary foci of study. In collaboration with A&S faculty, PCE 410 provides peace studies students unique first-hand research experiences. Prereq: PCE 201.

PDO Pediatric Dentistry

PDO 610 PEDIATRIC DENTISTRY SEMINAR I. (2)

This seminar course is the first in a series of four such seminars that discuss essential aspects of clinical pediatric dentistry, with emphasis on the scientific evidence supporting contemporary practice. These four consecutive seminar courses over four semesters (two academic years) provide the pediatric dentistry graduate student with a conceptual basis for caring for the oral health of children. This initial seminar of sixteen two-hour sessions (32 hours) addresses: effective communication with children, strategies for management of children's behavior in the clinical setting, development of the dentition, clinical management of traumatic injuries to the oral cavity, and restoration of carious teeth. Prereq: Enrollment in the College of Dentistry's Master of Science degree program in the Pediatric Dentistry track.

PDO 620 PEDIATRIC DENTISTRY SEMINAR II. (2)

This seminar course is the second in a series of four such seminars that discuss essential aspects of clinical pediatric dentistry, with emphasis on the scientific evidence supporting contemporary practice. These four consecutive seminar courses over four semesters (two academic years) provide the pediatric dentistry graduate student with a conceptual basis for caring for the oral health of children. This second seminar in the series consists of sixteen two-hour sessions (32 hours) and addresses: pulpal therapy, management of the arch circumference of the developing child, clinical management of the child with cleft lip/cleft palate, speech pathology, burns affecting the oral cavity, the use of antimicrobials, and medical compromising conditions affecting oral health care. Prereq: Enrollment in the College of Dentistry's Master of Science degree program in the Pediatric Dentistry track, and completion of PDO 610.

PDO 630 PEDIATRIC DENTISTRY SEMINAR III. (2)

This seminar course is the third in a series of four such seminars that discuss essential aspects of clinical pediatric dentistry, with emphasis on the scientific evidence supporting contemporary practice. These four consecutive seminar courses over four semesters (two academic years) provide the pediatric dentistry graduate student with a conceptual basis for caring for the oral health of children. This third seminar in the series consists of sixteen two-hour sessions (32 hours) and address: deleterious oral habits, orthodontic correction of malocclusions, esthetic dentistry of the child, abnormal development of the dentition, and elements of managing a successful pediatric dental practice. Prereq: Enrollment in the College of Dentistry's Master of Science degree program in the Pediatric Dentistry track, and completion of PDO 610 and 620.

PDO 640 PEDIATRIC DENTISTRY SEMINAR IV. (2)

This seminar course is the fourth and last of a series of four such seminars that discuss essential aspects of clinical pediatric dentistry, with emphasis on the scientific evidence supporting contemporary practice. These four consecutive seminar courses over four semesters (two academic years) provide the pediatric dentistry graduate student with a conceptual basis for caring for the oral health of children. This fourth seminar in the series consists of sixteen two-hour sessions (32 hours) and addresses the required reading list of the American Board of Pediatric Dentistry. Subsequent to completing the graduate program the pediatric dentistry graduate student will take a written and clinical examination administered by the American Board of Pediatric Dentistry in order to be board-certified in the clinical specialty. The seminar is designed to ensure the graduate student is prepared to successfully complete the examination. Prereq: Enrollment in the College of Dentistry's Master of Science degree program in the Pediatric Dentistry track, and completion of PDO 610, 620, and 630.

PDO 790 RESEARCH IN PEDIATRIC DENTISTRY. (1-6)

Participation in clinical, biomedical or biobehavioral research in pediatric dentistry. Research must be conducted independently, but with the supervision of a faculty mentor. Completed research is submitted as either a Master's degree thesis or a manuscript for submission to an appropriate peer review journal, and must be defended before a faculty committee. May be repeated to a maximum of twelve credit hours. Prereq: Enrollment in Pediatric Dentistry/College of Dentistry M.S. degree program.

***PDO 822 PEDIATRIC DENTISTRY I. (2)**

In this course in dentistry for children, emphasis will be placed on principles of oral surgical procedures, advanced restorative techniques, diagnosis and treatment of traumatic injuries, preventive dentistry and diagnosis and treatment of oral habits and cosmetic dentistry. Prereq: Second year standing in the College of Dentistry.

***PDO 831 CLINICAL PEDIATRIC DENTISTRY I. (1)**

An introductory clinical course instructing student dentists in oral health care for children. Prereq: PDO 822; coreq: PDO 834.

***PDO 834 PEDIATRIC DENTISTRY II. (2)**

This course is designed to introduce basic modern concepts in dentistry for children. Emphasis is placed on principles of child behavior management and basic restorative dentistry techniques. Prereq: PDO 822.

***PDO 841 CLINICAL PEDIATRIC DENTISTRY II. (2)**

An advanced clinical course instructing student dentists in oral health care for children. This course will consist of a clinical rotations in pediatric Dental offices. Students will shadow the attending specialist, and assist with procedures once they and the attending faculty feel comfortable. Knowledge gained in Pediatric Dentistry I PDO 822 and Pediatric Dentistry II PDO 834 is applied in this portion of the course. Clinic 80 hours; Lecture 4 hours. Prereq: PDO 822, 834, and 831.

PDO 850 PEDIATRIC DENTISTRY ELECTIVE. (1-10)

Pediatric Dentistry provide opportunities for further study of or experience in various aspects of pediatric dentistry. Topics may include management of children with developmental/medical conditions in a hospital, dental treatment of handicapped children and of normal children and adolescents, and further discussion of treatment techniques. Prereq: Minimum year in dental school and any course prerequisites will be announced for each topic.

PED Pediatrics

PED 815 FIRST-YEAR ELECTIVE, PEDIATRICS. (1-3)

With the advice and approval of his or her faculty adviser, the first-year student may choose approved electives offered by the Department of Pediatrics. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the first-year curriculum. Pass-fail only. Prereq: Admission to first year, College of Medicine.

PED 825 SECOND-YEAR ELECTIVE, PEDIATRICS. (1-4)

With the advice and approval of his or her faculty adviser, the second-year student may choose approved electives offered by the Department of Pediatrics. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the second-year curriculum. Pass-fail only. Prereq: Admission to second-year medical curriculum and approval of adviser.

PED 850-899 FOURTH-YEAR ELECTIVE FOR MEDICAL STUDENTS. (1-6)

With the advice and approval of the faculty adviser and the Student Progress and Promotions Committee, the fourth-year student may choose approved electives offered by the various departments in the College of Medicine. The intent is to provide the student an opportunity to develop his fund of knowledge and clinical competence. Prereq: Admission to the fourth year, College of Medicine and/or permission of the Student Progress and Promotions Committee.

Approved electives:

PED 850 NEONATAL INTENSIVE CARE
PED 852 PEDIATRIC RENAL-IMMUNOLOGY
PED 853 INFECTIOUS DISEASE
PED 854 GASTROENTEROLOGY
PED 859 ACTING INTERNSHIP IN PEDIATRICS - UK
PED 865 SLEEP MEDICINE
PED 869 PEDIATRIC ALLERGY AND CLINICAL IMMUNOLOGY
PED 870 PEDIATRIC CARDIOLOGY
PED 871 GENETICS/ENDOCRINOLOGY/METABOLISM
PED 872 ACTING INTERNSHIP IN MED-PEDS
PED 876 DYSMORPHOLOGY/GENETICS
PED 877 PEDIATRIC DEVELOPMENTAL DISABILITIES
PED 878 PEDIATRIC INTENSIVE CARE
PED 879 ADOLESCENT MEDICINE
PED 885 PEDIATRIC PULMONOLOGY
PED 890 COMMUNITY PEDIATRICS
PED 899 LEGISLATIVE ADVOCACY

PER Periodontics

PER 626 ADVANCED CONCEPTS IN GENERAL DENTISTRY. (1)

This course presents, by seminar, lecture or continuing education courses, advanced concepts in general dentistry that are essential to the clinical practice of periodontics. It includes advanced instruction in orthodontics, periodontal prosthesis, prosthodontics and oral surgery. May be repeated to a maximum of four credits. Prereq: Admission to a postdoctoral program of the College of Dentistry or consent of course director.

PER 661 MODERN CONCEPTS IN PERIODONTICS. (2)

A seminar course designed to present the present understanding of the etiology of periodontal disease and current techniques for treatment of periodontal problems. Prereq: Admission to graduate program of College of Dentistry; D.D.S. or D.M.D. degree.

PER 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

PER 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated for a total of 12 hours. Prereq: Admission to the Periodontics postdoctoral program and consent of director of graduate studies.

PER 770 TREATMENT PLANNING SEMINAR. (2)

In this seminar course, graduate students present and discuss diagnosis, prognosis, ideal treatment plans and alternative treatment plans for patients with periodontal disease. Each student gives at least eight case presentations. May be repeated to a maximum of eight credits. Lecture, 40 hours. Prereq: Admission to the Periodontics postdoctoral program or consent of course director.

PER 772 PERIODONTAL BIOLOGY AND PATHOLOGY. (2)

Seminar discussions, review and evaluation of the literature covering periodontal anatomy, periodontal biology, the pathology of periodontal diseases and etiological factors in periodontal disease. The subject area will be covered in four semesters. May be repeated four times for a maximum of eight credits. Lecture, 40 hours. Prereq: Admission to the Periodontics postdoctoral program or consent of course director.

PER 774 PERIODONTICS SURGICAL SEMINAR. (1)

In this seminar course participants present, discuss and critique surgical procedures that have been accomplished in the clinic. Reading assignments from the literature augment the clinical discussions and students are encouraged to use the literature to justify their procedures. Cases are presented on a rotating basis. May be repeated to a maximum of four credits. Prereq: Admission to Periodontics postdoctoral program or consent of course director.

PER 776 PERIODONTAL THERAPY SEMINAR. (1)

This is an advanced series of seminars on the clinical aspects of periodontal therapy. During the course, the students will learn about various modalities of periodontal therapy as presented in the periodontal literature, e.g., mucogingival treatment, implants and curettage. May be repeated to a maximum of two credits. Prereq: Admission to the Periodontics postdoctoral program or consent of course director.

PER 790 RESEARCH IN PERIODONTICS. (1-3)

This course involves direct student participation in a research project. Projects and thesis are approved by the course director and may be clinical, laboratory experimental or related to dental education. Projects may include original or ongoing research within the Department of Periodontics or other departments of the Medical Center. May be repeated to a maximum of six credits. Prereq: Admission to the Periodontics postdoctoral program and consent of the department involved.

***PER 810 PERIODONTICS I. (1)**

This course is an introduction to periodontology. Emphasis is on recognition of healthy gingival characteristics and early disease progression. The student is also introduced to etiology, epidemiology and immunology related to periodontal assessments, and plaque control measures. Prereq: CDS 815 or consent of instructor.

***PER 820 PERIODONTICS II. (3)**

This course presents the components of the first stages of periodontal therapy. Emphasis is on diagnosis, prognosis, treatment planning and non-surgical treatment of the periodontally involved patient. Prereq: PER 810 or consent of instructor.

***PER 821 CLINICAL PERIODONTICS II. (2)**

This is a course designed to provide the student with clinical experience so that he can obtain a minimal competence in the applications of periodontal procedures. Therapeutic procedures involving initial periodontal therapy will be performed by each student. Prereq: PER 811, or consent of instructor.

***PER 830 PERIODONTICS III. (2)**

This is a surgically oriented course which presents information necessary for the diagnosis, treatment planning and treatment of surgical cases. The information gained is applied to planning treatment for actual surgical cases. Prereq: PER 820 or consent of course director.

***PER 831 CLINICAL PERIODONTICS III. (2)**

This is a clinical course which offers the student the opportunity to treat patients with more advanced periodontal disease. Therapeutic procedures will be performed by each student as his patients' needs dictate. Prereq: PER 821; corequisite: PER 830; or consent of instructor.

PER 841 CLINICAL PERIODONTICS IV. (4)

This clinical course is a continuation of PER 831. The student receives further instruction and experience in diagnosing, planning treatment and treating patients with periodontitis and mucogingival problems. Prereq: PER 830 and PER 831, or consent of instructor.

PGY Physiology

PGY 206 ELEMENTARY PHYSIOLOGY. (3)

An introductory survey course in basic human physiology. Prereq: One semester of college biology.

PGY 207 CASE STUDIES IN PHYSIOLOGY. (1)

Group discussions of clinical cases and clinical applications relevant to human physiology. Prereq: PGY 206 or its equivalent. May be taken concurrently.

PGY 312 CELL PHYSIOLOGY AND PATHOPHYSIOLOGY. (3)

PGY 312, Cell Physiology and Pathophysiology, is a 3 credit-hour course that will provide students with an understanding of the structure and diverse functions of human cells. The general purpose of the lectures is not only to provide a fundamental overview of structure and function of human cell organelles in the context of cellular homeostasis, but also to discuss genetic and/or environmental factors that can impact the structure and function of one or multiple cell organelles. Discussion will include examples of human diseases such as cystic fibrosis, myopathy, and Diabetes Mellitus, wherever possible. Prereq: An introductory college-level Biology course (e.g., BIO 148).

#PGY 394 INDEPENDENT RESEARCH IN NEUROBIOLOGY AND NEUROSCIENCE. (1-3)

PGY 394 is designed to provide students with an intensive experience in laboratory or field research. Participants should take an active role in the design and execution of experiments and in the analysis and interpretation of data. They should be capable of "independent research" in the sense that they can conduct the experiments with little direct supervision. Students are expected to become familiar with related research in the current literature by regularly reading scientific journals. The student is expected to devote at least 3-5 hours per week for each credit hour enrolled to laboratory work, although often more time is necessary.

PGY 401G HUMAN REPRODUCTION, TECHNOLOGY, AND SOCIETY. (3)

The objective of this course is to cultivate a student's curiosity in the field of human reproductive biology, modern technological advancements such as contraception, assisted reproduction and stem cell research, and the social, economic, and ethical challenges and issues they create. Class topics will include basic reproductive processes from gametogenesis, fertilization, pregnancy, and embryogenesis, issues that may hamper reproductive successes, and technological advancements in reproductive medicine such as contraceptives, assisted reproductive technologies, prenatal genetic diagnosis, and stem cells. The social impacts of current and future reproductive medicine will also be discussed. Prereq: Elementary Physiology (e.g., PGY 206) or Biochemistry (BCH 401G) or consent by the instructor.

PGY 412G PRINCIPLES OF HUMAN PHYSIOLOGY LECTURES. (4)

The objective of this course is to provide the basic physiological mechanisms of human body function and physiological integration of the organ systems to maintain homeostasis. Students will be learning what the different organ systems do and how they do it. With this knowledge a student should be able to form a general understanding of how the body functions in health and disease. The general purpose of the lectures is to reinforce and expand upon the material presented in the text, with a focus on concepts and problem solving skills. Lectures will be further developed with reading assignments and discussion. Prereq: One year biology or PGY 206.

PGY 413G CRITICAL THINKING IN PRINCIPLES OF HUMAN PHYSIOLOGY. (1)

This is a 1 credit course designed for current and former students in PGY 412G, Principles of Human Physiology. This is a companion course for PGY 412G, Principles of Human Physiology. The objective of this course is to guide students to reinforce and apply physiological concepts to real-life scenarios. Through interactive group discussion formats, students will enhance their critical thinking and problem solving skills using questions, problems and/or case studies corresponding to PGY 412G material. Prereq: Students must have completed or be concurrently enrolled in PGY 412G.

***PGY 417 GENOMICS AND EPIGENETICS. (2)**

RNA-seq, ChIP-seq and microarray techniques are powerful tools for global analyses of transcriptomes and gene expression. This advanced hands-on course is designed for students who desire to become research scientists in any of the many areas of biology that use these techniques. Lectures on fundamental concepts, experimental design, and the impact of understanding gene expression patterns are combined with computer labs where students

analyze RNA-seq, ChIP-seq and microarray data. Prereq: A course in Cell Biology or Molecular Biology.

#PGY 431 INTRODUCTION TO NEUROENDOCRINOLOGY. (3)

This course will serve as an introduction to the field of neuroendocrinology – the study of the interactions between the body's two major integrative control systems. The course will provide an overview of how the brain and the endocrine system interact to regulate growth and development, the response to stress, appetite and body weight, sex differentiation and behavior, mental health, and circadian rhythms. Prereq: PGY 206, BIO 302, or BIO 350 or instructor approval.

PGY 502 PRINCIPLES OF SYSTEMS, CELLULAR AND MOLECULAR PHYSIOLOGY. (5)

Advanced survey of major mammalian physiological systems at the systems, cellular and molecular level; lectures, assigned reading, advanced texts or monographs, demonstrations and problem oriented study questions. Prereq: One year each, physics, general chemistry; PGY 206 or its equivalent. (Same as BIO 502.)

PGY 504 INDEPENDENT WORK IN PHYSIOLOGY. (2-4)

A study of some advanced problems in physiology under the direct supervision of the instructor. Discussion period, one hour; laboratory, four hours. May be repeated to a maximum of eight credits. Prereq: Consent of instructor.

PGY 512 EVOLUTIONARY MEDICINE. (3)

This online course surveys the consequences of evolution on human function and disease. Lecture materials, online discussions, and reading and writing assignments will expand on examples of the repercussions of evolutionary processes on health. Prereq: BIO 150-153 or equivalent introductory biology sequence, BIO 315 or equivalent, and an introductory physiology course (PGY 206, BIO 350, or PGY 412G).

PGY 535 COMPARATIVE NEUROBIOLOGY AND BEHAVIOR. (3)

The course consists of an introduction to neurophysiology and study of the neural basis of sensory processing and motor patterns. A comparative analysis of the neurobiological basis of behavioral responses will be made, utilizing a broad range of vertebrates and invertebrates. Prereq: BIO 350 or consent of instructor. (Same as BIO 535.)

PGY 560 PATHOPHYSIOLOGY: INTEGRATIVE STUDY IN PHYSIOLOGY AND MEDICINE. (1)

This course aims at the development of an integrative conception of the human organism, and involves the study of medical case histories. The complex network of physiologic interactions which underlie disease states is investigated. The physiologic bases of health, illness, dying, and death are explored. May be repeated to a maximum of three credits. Prereq: PGY 412G, PGY 502 or consent of instructor.

PGY 601 MAMMALIAN ENDOCRINOLOGY. (3)

An introduction to the basic anatomy, physiology and biochemistry of endocrine systems with emphasis on mechanisms of hormone synthesis, secretion and action. Lectures and reading assignments will focus on endocrine function in mammalian species, including laboratory animals, humans and livestock. Prereq: BCH 401G and BIO 350 or equivalents. (Same as ASC 601.)

PGY 602 READINGS IN SYSTEMS, CELLULAR AND MOLECULAR PHYSIOLOGY. (3)

A critical evaluation at the advanced level of the literature of the major mammalian physiological systems at the organ, cellular and molecular level. The course is intended to be taken with and to complement PGY 502. It includes a critical reading of the primary literature. Prereq: One year each of physics, general chemistry; PGY 206 or equivalent.

PGY 603 DESIGN AND ANALYSIS. (3)

This is a course for students in the biomedical sciences interested in understanding the principles and pitfalls of experimental design and data analysis. The course focuses on why specific experimental design and analysis strategies are applied. Prereq: Consent of instructor. An introductory statistics course is recommended, e.g., STA 570 or STA 580.

PGY 604 ADVANCED CARDIOVASCULAR PHYSIOLOGY. (3)

The objective of this course is to examine in-depth the various functions of the cardiovascular system and their proposed mechanisms. Prereq: PGY 502 or consent of instructor.

PGY 605 NEUROBIOLOGY OF CNS INJURY AND REPAIR. (3)

The objective of the course will be to provide a general overview of the current state of knowledge concerning the pathophysiology and therapeutic approaches to central nervous system injury. The course will provide a strong working background concerning the issues, techniques and frontiers of neurotrauma therapeutic discovery research aimed at reducing acute post-traumatic neurodegeneration in the injured brain or spinal cord or enabling regeneration and repair. This course is a graduate level course intended for students who are in their second or subsequent years of graduate study and who are pursuing focused research training in neurotrauma research. No special prerequisites, other than graduate standing, are necessary. However, a background in neuroanatomy and neurophysiology is highly recommended. Prereq: Permission of instructor. (Same as ANA 605.)

PGY 608 ADVANCED RENAL PHYSIOLOGY. (3)

This course will examine in-depth the physiology and pathophysiology of the renal system, as well as provide an understanding of advanced renal physiological techniques. Prereq: PGY 412G, PGY 502 or consent of instructor.

PGY 609 ADVANCED RESPIRATORY PHYSIOLOGY. (3)

This course will examine in-depth the physiology and pathophysiology of the respiratory system. Prereq: PGY 412G, PGY 502 or consent of instructor.

PGY 612 BIOLOGY OF AGING. (3)

A multidisciplinary discussion of how the process of aging affects biological systems. Coverage will be quite broad and includes topics such as subcellular and cellular aging, genetics, immunology, anatomy and physiology, animal model of aging, etc. Prereq: Enrollment in the doctoral program in Gerontology or a biomedical science department or consent of instructor. (Same as ANA/BIO/GRN 612.)

PGY 615 SEMINAR IN TEACHING MEDICAL SCIENCE (MED SCIENCE TEACHING I). (2)

A two (2) credit seminar course in which issues related to the theory and practice of life science education are discussed in a Socratic manner. May be repeated to a maximum of three credits. Prereq: Current enrollment in a life science graduate program. (Same as GRN 615.)

PGY 616 PRACTICUM IN TEACHING MEDICAL SCIENCE (MED SCIENCE TEACHING II). (2)

A two (2) credit experimental course in which students will directly participate in the teaching of Physiology under supervised conditions. May be repeated to a maximum of six credits. Prereq: PGY 615 may be taken concurrently.

***PGY 617 PHYSIOLOGICAL GENOMICS. (2)**

RNA-seq, ChIP-seq and microarray techniques are powerful tools for global analyses of transcriptomes and gene expression. They are widely used in biological and medical research. Lectures on fundamental concepts, experimental design, and the impact of understanding gene expression patterns are combined with computer labs where students analyze RNA-seq, ChIP-seq and microarray data. Prereq: IBS 603 or an equivalent course in Cell Biology or Molecular Biology. (Same as PHA 617.)

PGY 625 MUSCLE FORUM. (1)

Muscle Forum is a course that will allow students to develop critical evaluatory skills for seminars and grant writing in the field of Muscle Biology. Prereq: Students need to be enrolled in the Rehabilitation Sciences doctoral program, one of the graduate programs of the Integrative Biomedical Sciences, or with permission of the course director. (Same as RHB 625.)

PGY 627 PROSEMINAR IN PHYSIOLOGICAL PSYCHOLOGY. (3)

An intensive examination of theories, methods of investigation, and current developments in the field of physiological psychology. Prereq: Graduate standing or consent of instructor. (Same as PSY 627.)

PGY 630 ADVANCED TOPICS IN PHYSIOLOGY. (1-3)

Contemporary topics in physiology. Course designed to utilize the special research interests of resident and visiting faculty. May be repeated to a maximum of six credits. Prereq: PGY 502 or consent of instructor.

PGY 638 DEVELOPMENTAL NEUROBIOLOGY. (3)

An explanation of the processes which contribute to the development of the nervous system. Neurophysiological, cell biological and molecular approaches to cell differentiation, neuronal pathfinding and synapse formation and stabilization will be explored and discussed. Examples will be drawn from both vertebrate and invertebrate preparations. Prereq: BIO 535 or consent of instructor. (Same as ANA/BIO/PSY 638.)

***PGY 650 ANIMAL PHYSIOLOGY LABORATORY. (3)**

Hands-on laboratory exercises in animal physiology. Prereq: Previous or concurrent enrollment in BIO 550. (Same as BIO 650.)

PGY 660 BIOLOGY OF REPRODUCTION. (3)

Advanced study of current topics in reproductive biology. The course is comprised equally of student-led discussions and lectures given by faculty with research expertise in selected topics. Readings will be taken from current and classic literature. Topics covered include (but are not limited to) molecular and cellular endocrinology, hormone receptors and mechanism of action, reproductive neuroendocrinology, reproductive behavior, gametogenesis, fertilization, sexual differentiation, puberty, menopause and environmental effects on reproduction. Emphasis will be placed on the analysis and understanding of the experimental basis for current concepts in reproductive biology. Prereq: ASC/PGY 601 and ASC 364 or BIO/PGY 502 or consent of instructor. (Same as ANA 660 and ASC 660.)

PGY 710 AGING OF THE NERVOUS SYSTEM. (3)

This course will examine the alterations in the brain that occur with aging and in neurodegenerative disorders such as Alzheimer's disease. The emphasis will be on human aging although the relevance of animal models to studies of human aging will be a recurrent theme. The course will examine aging at several levels, including molecular, cellular, organismic, and behavioral. A strong background in the basic sciences is encouraged. (Same as ANA/GRN/PHA 710.)

PGY 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

PGY 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

PGY 766 TOPICAL SEMINAR BEHAVIORAL NEUROSCIENCE. (3)

A study of selected topics in behavioral neuroscience with emphasis on recent research and theory. May be repeated to a maximum of nine credits. Prereq: Consent of instructor. This course may be elected to fulfill requirements in the Psychology and Physiology graduate programs. (Same as PSY 766.)

PGY 767 TOPICAL SEMINAR IN BEHAVIORAL NEUROSCIENCE. (3)

A study of selected topics in behavioral neuroscience with emphasis on recent research and theory. May be repeated to a maximum of nine credits. Prereq: Consent of instructor. This course may be elected to fulfill requirements in the psychology and physiology graduate programs. (Same as PSY 767.)

PGY 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

PGY 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

PGY 771 PROSEMINAR IN CELL PHYSIOLOGY. (2)

A comprehensive discussion of topics in cellular physiology and biophysics using advanced texts and readings in the original literature. Includes such topics as biological membranes, transport mechanisms, effects of hormones on membranes. Prereq: Graduate student in physiology and biophysics or consent of Director of Graduate Study.

PGY 774 GRADUATE SEMINAR IN PHYSIOLOGY. (1)

A discussion-based course for physiology graduate students and other advanced students interested in physiology. The students learn how to understand and critique research papers and how to review a research manuscript. The full potential of the course is realized in conjunction with the Physiology Seminar Series, because the material of the course prepares the students for these Seminars. Students are encouraged to participate until they are heavily involved in their research project.

PGY 791 RESEARCH IN PHYSIOLOGY. (1-15)

May be repeated to a maximum of 15 credits. Prereq: Consent of instructor.

PGY 813 NEUROPHYSIOLOGY. (1)

The brain uses electrical signals to process all information it receives and analyzes. Individual neurons encode complex information into simple electrical signals; the meaning behind these signals is derived from the specific interconnections of neurons. The purpose of neurophysiology is to describe how the neuron produces electrical and chemical signals and illustrate how these signals are involved in the functional organization of neural circuits. This course also describes how the central nervous system analyzes and integrates the various inputs, elicits command decisions that determine the motor and/or endocrine responses. Lecture: three hours per week for five weeks. Prereq: Admission to the College of Dentistry, or consent of the Course Director. (Same as OBI 813.)

PGY 814 PRINCIPLES OF HUMAN PHYSIOLOGY FOR DENTAL STUDENTS. (4)

This course enables student dentists to understand the basic principles of human physiology, especially as it relates to the practice of dentistry. The introduction of the course presents the basic physiology of cells, conducting and contracting tissues, lining and secretory tissues, and other special tissues. The course focuses on the major physiological systems and presents them at the system, cellular, and molecular levels; and emphasizes those aspects particularly relevant to dentistry - dentin sensitivity, dental and pulpal pain, muscle dysfunction, ischemic and, hypertensive heart disease, oral manifestations of endocrine abnormalities, temperature regulation, calcium-phosphate homeostasis, and the dental mineralized tissues. Upon successful completion of the course, student dentists will be able to rationally and scientifically apply basic cell, tissue, organ, and organ system function to clinical decision-making. Lectures with assigned reading: 68 hours. Prereq: OBI 812 or consent of the course director. (Same as OBI 814.)

PGY 815 FIRST-YEAR ELECTIVE, PHYSIOLOGY. (1-3)

With the advice and approval of his or her faculty adviser, the first-year student may choose approved electives offered by the Department of Physiology and Biophysics. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the first-year curriculum. Pass-fail only. Prereq: Admission to first year, College of Medicine.

PGY 818 HUMAN FUNCTION. (8)

This course provides in-depth instruction on the physiological mechanisms of body function from the single cell to the organism level. The course is team taught by medical scientists and clinicians. Teaching methodologies include didactic and Socratic lectures, small group discussions, demonstrations and live model and computer simulated laboratories. Lecture, 20 hours per week. Prereq: Admission to medical school (first year). (Same as OBI 814.)

PGY 825 SECOND-YEAR ELECTIVE, PHYSIOLOGY. (1-4)

With the advice and approval of his or her faculty adviser, the second-year student may choose approved electives offered by the Department of Physiology and Biophysics. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the second-year curriculum. Pass-fail only. Prereq: Admission to second-year medical curriculum and approval of adviser.

PGY 850-899 FOURTH-YEAR ELECTIVE FOR MEDICAL STUDENTS. (1-6)

With the advice and approval of the faculty adviser and the Student Progress and Promotions Committee, the fourth-year student may choose approved electives offered by the various departments in the College of Medicine. The intent is to provide the student an opportunity to develop his fund of knowledge and clinical competence. Prereq: Admission to the fourth year, College of Medicine and/or permission of the Student Progress and Promotions Committee.

**Approved elective:
PGY 850 RESEARCH IN PHYSIOLOGY**

PHA Pharmacology

PHA 200 PHARMACOLOGY: DRUGS AND HUMAN HEALTH. (3)

This course will give students the needed background to understand how drugs impact human health and guide their appropriate use. Lectures will focus on how drugs function, how they impact our lives, and how new targets for drugs are discovered. This course will provide a history of drug development, design, and drug discovery, and examine the uses and actions of commonly prescribed and over-the-counter drugs. This course will also cover drugs of abuse and those used in sports and performance enhancement. Students will learn about when drugs should be used, conditions under which their use is prudent, and how to obtain accurate information regarding use, benefits and risks of new drugs. This class will give students valuable scientific insights into drug actions and provide a basis for lifelong learning to better protect and inform health care choices. Prereq: One semester of College Biology.

PHA 422G PHARMACOLOGY OF TREATING HUMAN DISEASE. (3)

This course will provide students with a fundamental understanding of the actions of drugs most commonly used in the treatment of the major human diseases, drugs of abuse, and those used in sports to enhance performance. This course is geared toward the pre-professional and others interested in a career in health care and research. Prereq: BIO 350 and BIO 315.

PHA 612 QUANTITATIVE PHARMACODYNAMICS: PHARMACOKINETICS. (3)

Quantitative treatment of dynamics of drug absorption, distribution, metabolism and excretion, including development of both mathematical models and model-independent approaches for describing these processes. Prereq: MA 114 and consent of instructor. (Same as PHS 612.)

PHA 616 BIOLOGY AND THERAPY OF CANCER. (3)

Biology of cancer will be discussed at the molecular, cellular and organismic level. Emphasis will be placed on cellular signaling, apoptosis and cell cycle unique to cancer cells, which affects tumor cell behavior and its interactions with the host immune system. The biology of hematopoietic cells will also be included. Clinicians active in treatment and research of various types of cancer will be invited to participate in the lectures. Prereq: BCH 501, 502, BIO 685. (Same as MED/MI 616.)

***PHA 617 PHYSIOLOGICAL GENOMICS. (2)**

RNA-seq, ChIP-seq and microarray techniques are powerful tools for global analyses of transcriptomes and gene expression. They are widely used in biological and medical research. Lectures on fundamental concepts, experimental design, and the impact of understanding gene expression patterns are combined with computer labs where students analyze RNA-seq, ChIP-seq and microarray data. Prereq: IBS 603 or an equivalent course in Cell Biology or Molecular Biology. (Same as PGY 617.)

PHA 621 PRINCIPLES OF DRUG ACTION. (3)

The objective of this course is to familiarize graduate students with the principles and mechanisms of drug action in biochemical and physiological systems. Students will discuss the quantitative approaches to assessing drug responses, metabolism and toxicity. Prereq: Consent of instructor.

PHA 622 MOLECULAR DRUG TARGETS AND THERAPEUTICS. (1-4)

PHA 622 is an advanced course designed to provide graduate students with state of the art information regarding drugs, drug action and targets for drug action. Emphasis will be placed on drugs that interact with the cardiovascular system (section 001), the central nervous system (section 002), chemotherapeutic agents (section 003), and other important drug classes such as nonsteroidal anti-inflammatory agents, steroid hormones, antidiabetic agents and toxicology (section 004). Each section is designed to be a separate one hour course. Students may take any combination of sections from one to all four sections. For each agent, emphasis will be placed on the cellular mechanisms of action, the receptors or cellular targets at which they act, therapeutic issues and potential toxicities. This information is intended to be integrated with other disciplines, including anatomy, biochemistry, physiology, psychology and molecular biology. Prereq: IBS 601-609 and PHA 621.

PHA 623 PROFESSIONAL DEVELOPMENT FOR SCIENTISTS IN TRAINING. (3)

The purpose of this course is to introduce graduate students to useful topics in their quest to attain and retain a tenure track researcher position (or equivalent) at some point in their scientific future. These subjects are not always taught by mentors or through a traditional curriculum, but they are of utmost importance in a successful career. A breadth of issues will be presented that many principal investigators would say they wished they learned in graduate school and should give students the resources to become competitive scientific professionals. (Same as NS 623.)

PHA 630 SPECIAL TOPICS IN PHARMACOLOGY. (1-3)

Detailed examination of current, significant topics in pharmacology such as: contemporary neuroscience methodology, molecular and cellular pharmacodynamics, transmembrane signaling. Course is designed to offer flexibility to students in different tracks, different emphasis in a given year and to utilize the special research interests in resident and visiting investigators. May be repeated to a maximum of six credits. Prereq: Consent of course director.

PHA 658 ADVANCED NEUROPHARMACOLOGY. (2)

A study of the general theories of the mode of action of drugs upon nervous tissue and a review of the effects of analgesics, sedatives, hypnotics, anesthetics, tranquilizers, psychotomimetics, analeptics, antidepressants, anti-convulsants and drugs affecting motor dyskinesias upon neurones, synapses and functional components of the central nervous system. Prereq: PHA 522, IBS 601-606, or consent of instructor.

PHA 670 CHEMICAL CARCINOGENESIS. (3)

Lectures and discussion of the chemical and biochemical reactions of chemical carcinogens and their metabolites. Prereq: CHE 232; PHR 400; or BCH 501, 502. (Same as TOX 670.)

PHA 710 AGING OF THE NERVOUS SYSTEM. (3)

This course will examine the alterations in the brain that occur with aging and in neurodegenerative disorders such as Alzheimer's disease. The emphasis will be on human aging although the relevance of animal models to studies of human aging will be a recurrent theme. The course will examine aging at several levels, including molecular, cellular, organismic, and behavioral. A strong background in the basic sciences is encouraged. (Same as ANA/GRN/PGY 710.)

PHA 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

PHA 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

PHA 750 RESEARCH IN PHARMACOLOGY. (1-5)

May be repeated to a maximum of 15 credits.

PHA 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

PHA 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

PHA 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

PHA 770 SEMINAR IN PHARMACOLOGY. (1)

May be repeated indefinitely.

PHA 779 MEMBRANE SCIENCES COLLOQUIUM. (1)

Outstanding membrane scientists present their current research on biological and/or synthetic membranes. Students read a pertinent paper by the speaker prior to his/her talk and write a short paper on the talk; especially important is relevance of the main points of the talk to membrane science in general and the student's own research in particular. May be repeated to a maximum of six credits. (Same as BCH/CHE/CME/PHR 779.)

PHA 815 FIRST-YEAR ELECTIVE, PHARMACOLOGY. (1-3)

With the advice and approval of his or her faculty adviser, the first-year student may choose approved electives offered by the Department of Pharmacology. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the first-year curriculum. Pass-fail only. Prereq: Admission to first year, College of Medicine.

PHA 822 DENTAL PHARMACOLOGY AND THERAPEUTICS. (4)

This course will provide students with a fundamental understanding of the pharmacology and therapeutic uses of drugs commonly used by their patients and in their practice. Prereq: OBI 812 and OBI 814. (Same as OBI 826.)

PHA 824 MECHANISMS OF DISEASE AND TREATMENT/PHARMACOLOGY. (7)

This course introduces the principal actions of substances which are used as drugs for treatment of diseases and suffering in humans. It will cover the general principles of drug action, how drugs alter the function of normal and pathologic tissues and organisms and how they influence the disease process. Drugs used in the treatment of disease processes will be integrated with discussion of those diseases in PAT 823. Lecture, 20 hours per week. Prereq: Admission to second year of medical curriculum.

PHA 825 SECOND-YEAR ELECTIVE, PHARMACOLOGY. (1-4)

With the advice and approval of his or her faculty adviser, the second-year student may choose approved electives offered by the Department of Pharmacology. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the second-year curriculum. Pass-fail only. Prereq: Admission to second-year medical curriculum and approval of adviser.

PHA 850-899 FOURTH-YEAR ELECTIVE FOR MEDICAL STUDENTS. (1-6)

With the advice and approval of the faculty adviser and the Student Progress and Promotions Committee, the fourth-year student may choose approved electives offered by the various departments in the College of Medicine. The intent is to provide the student an opportunity to develop his fund of knowledge and clinical competence. Prereq: Admission to the fourth year, College of Medicine and/or permission of the Student Progress and Promotions Committee.

PHI**Philosophy**

Note: Prior to the priority registration period each semester, the Department of Philosophy publishes information on courses (200 level and above) to be offered for the next semester. This information includes details on course topics and materials to be used in each course. Students are encouraged to obtain the information to assist them in course selection.

PHI 100 INTRODUCTION TO PHILOSOPHY: KNOWLEDGE AND REALITY. (3)

An introduction to philosophical studies with emphasis on issues of knowing, reality, and meaning related to human existence.

***PHI 120 THE ART OF THINKING: AN INTRODUCTION TO LOGIC. (3)**

A course which treats argumentation, syllogistic, and sentential logic. The focus will be on the use of formal methods in the construction and criticism of actual arguments, the aim being to inculcate standards of good reasoning, e.g., clarity, consistency and validity. Credit is not given to students who already have credit for PHI 320.

PHI 130 INTRODUCTION TO PHILOSOPHY: MORALITY AND SOCIETY. (3)

An introduction to philosophical studies with emphasis on a critical study of principles of moral action and social and political values.

PHI 205 FOOD ETHICS. (3)

An examination of philosophical issues about food, including whether taste is subjective or objective, why different foods are acceptable to eat in some cultures but not in others, the moral permissibility of eating animals and animal products, and the impact of food production on the environment.

PHI 245 INTRODUCTION TO PHILOSOPHY OF RELIGION. (3)

An introduction to the philosophical study of religion, with attention to issues such as the nature of religious language, religious experience, concepts of God, science and religion, religious pluralism, miracles and revelation, death and the afterlife, and the problem of evil.

PHI 260 HISTORY OF PHILOSOPHY I: FROM GREEK BEGINNINGS TO THE MIDDLE AGES. (3)

Western philosophy from ancient through late medieval times including systematic work in logic, metaphysics, epistemology and ethics by such philosophers as Plato, Aristotle, Augustine and Aquinas.

PHI 270 HISTORY OF PHILOSOPHY II: FROM THE RENAISSANCE TO THE PRESENT ERA. (3)

An introductory study of the development of Western philosophy from early modern to recent times including systematic work in logic, metaphysics, epistemology and ethics by such philosophers as Occam, Descartes, Hume and Kant.

PHI 300 SPECIAL TOPICS IN PHILOSOPHY (Subtitle required). (1-3)

Topics that cross traditional systematic or historical lines in philosophy or that relate philosophy to topics or periods in other disciplines. May be repeated under a different subtitle to a maximum of seven credits. Prereq: Determined by instructor.

PHI 305 HEALTH CARE ETHICS. (3)

A consideration of the ethical issues and difficult choices generated or made acute by advances in biology, technology, and medicine. Typical issues include: informed consent, healer-patient relationships, truth telling, confidentiality, problem of birth defects, abortion, placebos and health, allocation of scarce medical resources, genetic research and experimentation, cost containment in health care, accountability of health care professionals, care of the dying, and death.

PHI 310 PHILOSOPHY OF HUMAN NATURE. (3)

An introductory philosophy course for upper division students that analyzes various ways that philosophers have attempted to define the human individual. It pursues diverse methods of inquiry into questions such as these: Do human beings have a fixed and definable human nature? What differentiates the properly human from the nonhuman? Are human actions free or determined? How are human beings essentially related to history, culture, society and the natural environment?

PHI 315 PHILOSOPHY AND SCIENCE FICTION. (3)

An examination of fundamental questions in metaphysics and epistemology through a comparison of works of philosophy and science fiction. Questions will be discussed such as: Can there be time travel? Can computers think? Can there be non-human persons, and if so how would we identify them? Can there be ways of knowing that are radically different from our own, and what might they be like? How much can a person change while remaining the same person?

Course Descriptions

PHI 317 EXISTENTIALIST THOUGHT AND LITERATURE. (3)

A survey of existentialism as a literary movement as well as a philosophical one, with emphasis upon their intersection and interaction. The course will trace the emergence of existentialist themes in modern thought and culture, and will analyze and assess the movements' continuing significance.

PHI 320 SYMBOLIC LOGIC I. (3)

A systematic study of sentential logic, elementary quantification, and the logic of identity. The student will acquire specific skills in symbolic methods of analysis which are necessary for further study in logic as well as useful for addressing complex issues in philosophy and other areas.

PHI 330 ETHICS. (3)

An examination of fundamental issues in ethics, such as duty, character, virtue and vice, evil, moral responsibility, free will, the good life, the emotions, skepticism, and rationality.

PHI 332 PROFESSIONAL ETHICS. (3)

A study of ethical issues related to professional roles, especially those of physicians and lawyers. Among the topics to be considered are the nature and justification of professional responsibilities and duties; obligations of professions to society; the professional-client relationship and its rights and obligations; enforcement of codes of ethics.

PHI 334 BUSINESS ETHICS. (3)

An introduction to moral problems that arise in contemporary business practice and the ethical frameworks proposed to resolve them. Topics will include areas such as truth-telling and integrity; social responsibility; property rights and their limitations; and justice in personnel and labor practices.

PHI 335 THE INDIVIDUAL AND SOCIETY. (3)

An examination of several incompatible views concerning the relation between the individual and society, including radical individualism and collectivism, as well as more moderate theories. Attention will be given to contemporary as well as classical spokesmen for these views and emphasis will be placed upon relating these theories to contemporary social, cultural, and political issues.

PHI 336 ENVIRONMENTAL ETHICS. (3)

An introduction to moral problems that arise in human interaction with the natural environment. Topics to be addressed include questions such as: what is man's place in nature? Do nonhuman animals or ecosystems have intrinsic moral worth, and if so, how can it be respected? What problems and ambiguities arise in attempting to live in an environmentally responsible fashion? How can we adjudicate conflicts between social and environmental values?

PHI 337 INTRODUCTION TO LEGAL PHILOSOPHY. (3)

A general introduction to basic concepts, institutions, and mechanisms of law. Understanding of the legal system and its methods is promoted through discussion of topics which include: basic legal reasoning, the function of the legal process, fundamental legal concepts and categories (such as property, crime, and contract).

PHI 340 INTRODUCTION TO FEMINISM AND PHILOSOPHY. (3)

Introduction to basic feminist thought from a philosophical perspective explored through topics such as gender roles, images of women in society, violence against women, and male socialization. Emphasis on causes of and solutions to the oppression of women. This course fulfills the UK Core Requirement: Community, Culture, and Citizenship in the USA.

PHI 343 ASIAN PHILOSOPHY. (3)

An introduction to the main concepts, assumptions, problems and texts of one or more Asian philosophical traditions, such as Hinduism, Buddhism, Taoism, and Confucianism.

PHI 350 METAPHYSICS AND EPISTEMOLOGY. (3)

An examination of fundamental issues in metaphysics and epistemology, such as causation, the nature of space and time, personal identity, free will, the existence of God, the nature and types of knowledge, the character of human existence, skepticism, and rationality. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

***PHI 361 BIOLOGY AND SOCIETY (Subtitle required). (3)**

Humans, although undeniably unique, are as much a part of the natural world as any other species. This course surveys historical and contemporary approaches to the study of humans from a biological point of view. Against this backdrop, we examine a range of issues that loom large in modern society, for example, whether race and gender have a firm basis in biological science. This course is repeatable up to a total of 6 credit hours under different subtitles.

PHI 380 DEATH, DYING AND THE QUALITY OF LIFE. (3)

A philosophical and interdisciplinary investigation of a cluster of prominent issues about the meaning of life and death, caring for dying persons, and the quality of life of the terminally ill. Among topics included are: death definitions and criteria; allowing to die vs. killing; euthanasia and suicide; life prolongation, ethics of care of the terminally ill; and rights of the dying.

PHI 393 PHILOSOPHY OF FILM. (3)

An examination of the aesthetics of film from the early 20th Century to the present, with a focus on how the experience of film as a medium changes our relation to the world of objects as well as our relation to other people, and how changes in the medium of film itself have altered aesthetic theories.

PHI 395 INDEPENDENT WORK. (3)

Open only to students who have distinguished themselves in philosophy or in allied subjects. May be repeated to a maximum of 12 credits. Prereq: Major and standing of 3.0 in department.

PHI 399 EXPERIENTIAL LEARNING. (1-6)

To provide the opportunity for students to earn credit for work-study experience. The student must work with a faculty member to describe the nature of the experience, the work to be performed, the accompanying philosophical reflection and study, appropriate course credit for the work, and criteria by which the work may be evaluated. This information must be written and filed in the Philosophy Department and the Office for Experiential Education prior to the student's registration for the course. May be repeated to a maximum of 12 credits. Pass-fail only. Prereq: Consent of instructor and department chairperson; completion of a departmental learning agreement.

PHI 500 TOPICS IN PHILOSOPHY (Subtitle required). (1-3)

Topics that cross traditional systematic or historical lines in philosophy or that relate philosophy to topics or periods in other disciplines. May be repeated to a maximum of seven credits.

PHI 520 SYMBOLIC LOGIC II. (3)

An intermediate course in symbolic logic which reviews sentential logic, develops further the logic of quantification, and introduces metalogical issues such as the construction, consistency, and completeness of deductive systems. Prereq: PHI 320 or consent of instructor.

GROUP A

PHI 503 TOPICS IN ANCIENT PHILOSOPHY. (3)

A study of representative texts and issues in Ancient Philosophy with special attention to historical continuity and the interrelations of thinkers and problems. Possible Topics: Pre-Socratic Philosophers, Plato, Aristotle, Stoicism, Epicureanism, Scepticism. May be repeated to a maximum of six credits. Prereq: PHI 260 or consent of the instructor.

PHI 504 ISLAMIC AND JEWISH PHILOSOPHY AND THE CLASSICAL TRADITION. (3)

A study of representative texts and issues in Islamic and Jewish philosophy with special attention to the historical continuity with the Greek philosophical tradition and the interrelations of thinkers and problems. Possible topics: the commensurability of philosophy and (revealed) law, the creation or eternity of the world, the nature of prophecy, the human good, the nature of God and divine language. Prereq: PHI 260 or consent of instructor.

PHI 506 TOPICS IN MEDIEVAL PHILOSOPHY. (3)

An investigation of issues in Medieval Philosophy. Topics will be chosen which illustrate continuity both with Ancient Greek Sources and with problems in Modern Philosophy. Possible Topics: Neo-Platonism, Faith and Reason, Freedom and Determinism, Universals, the Existence of God, Renaissance reactions. May be repeated to a maximum of six credits. Prereq: PHI 260 or the consent of the instructor.

PHI 509 TOPICS IN THE HISTORY OF MODERN PHILOSOPHY. (3)

A selective study of representative issues and texts in modern philosophy, with special emphasis upon historical continuity and interrelation of thinkers and problems. Possible topics: British empiricism; Leibniz and Locke; Descartes and his critics; Hobbes and Rousseau; Hume and Kant; philosophy and the rise of modern science. May be repeated to a maximum of six credits. Prereq: PHI 270 or the consent of the instructor.

PHI 513 NINETEENTH CENTURY PHILOSOPHY. (3)

An examination of the major topics and trends in 19th century philosophy. Prereq: PHI 270 or consent of instructor.

PHI 514 AMERICAN PHILOSOPHY. (3)

A study of the development of philosophy in America from colonial to recent times with attention to religious, political, literary and scientific influences on American thought. The focus will be on the pragmatic spirit that was the moving force from 19th century idealism to 20th century naturalism, with emphasis on the works of such thinkers as Royce, Peirce, James and Dewey.

PHI 515 CONTEMPORARY PHILOSOPHY: THE ANALYTIC TURN. (3)

A survey of several 20th century philosophical movements, such as logical positivism and ordinary language philosophy, whose members agree that careful attention to language is one of the keys to the resolution of philosophical problems. The works of representative thinkers such as Moore, Russell, the Vienna Circle, Wittgenstein and Austin will be studied. Prereq: PHI 320 or 350 or the consent of the instructor.

PHI 516 CONTEMPORARY PHILOSOPHY: PHENOMENOLOGICAL DIRECTIONS. (3)

A study of 20th century philosophies represented by the works of thinkers such as Husserl and Heidegger, Gadamer and Ricoeur, Habermas and Apel. Generally based in a reflection on human experience, these philosophies undertake a radical criticism of common conceptions of human nature while variously emphasizing rationality, ontology, language, or social and historical context. Prereq: PHI 270 or consent of instructor.

PHI 517 EXISTENTIALISM. (3)

A systematic study of the fundamental concepts and problems of existentialism. Readings selected from such philosophers as Kierkegaard, Nietzsche, Sartre, Marcel, Heidegger, and Jaspers. Prereq: PHI 270 or the consent of the instructor.

GROUP B**PHI 519 CRITICAL SOCIAL THOUGHT. (3)**

This course provides a pluralistic introduction to major 20th-century paradigms of critical social thought. Critical social thought in philosophy comprises those authors and schools that focus philosophical methods and questions on the analysis of social conditions and/or focus sociocultural methods and questions on the study of philosophy. These include feminist philosophy, Marxist-influenced social theory, poststructuralism, critical race theory, and post-analytic philosophy. Prereq: For undergraduates, PHI 270, 335, or 340 or consent of instructor. For graduate students outside the philosophy department, permission of the instructor.

PHI 530 ETHICAL THEORY. (3)

A study of ethical theories by detailed examination of a few selected works. Theories considered may include naturalism, intuitionism, noncognitivism, utilitarianism, universalizability, and natural law. Prereq: PHI 130, 330, or 335 or the consent of the instructor.

PHI 531 ADVANCED TOPICS IN ETHICS (Subtitle required). (3)

A topical study in ethics, emphasizing, but not restricted to, contemporary issues. Topics may include the nature of practical reason, justification of moral theories, moral luck, amorality and immorality, moral language, and weakness of will. May be repeated to a maximum of six credits under different subtitles. Prereq: One of the following: PHI 130, 305, 330, or 530; or graduate standing.

PHI 535 SOCIAL AND POLITICAL PHILOSOPHY. (3)

A critical examination of some philosophical problems concerning the nature and evaluation of social and political organizations. For example, questions concerning the nature, justification, and limits of political power may be explored in connection with a study of important classical positions. Prereq: PHI 130, 330, or 335 or the consent of the instructor.

PHI 537 PHILOSOPHY OF LAW. (3)

Concept of law; relations between law and morals; nature of legal reasoning; analysis of legal concepts; justification of punishment. Pass/fail basis only for law students. Prereq: PHI 130, 330, or 335 or the consent of the instructor.

PHI 540 FEMINIST PHILOSOPHY. (3)

An introduction to feminist philosophical theory, including feminist treatments of various questions in metaphysics, epistemology, logic, and value theory, such as: the nature (if any) of the self; the role of perspectives in knowledge; the nature of reason and the criteria for justification in argumentation; feminist theories of morality and feminist theories of social justice.

PHI 545 PHILOSOPHY OF RELIGION. (3)

An analysis of the philosophical issues raised by religion, such as the problem of religious knowledge, the nature of religious language, science and religion, concepts of God, death, and evil. Prereq: PHI 100, 260, or 270 or the consent of the instructor.

PHI 592 AESTHETICS. (3)

Problems of method in aesthetics; major types of aesthetic theory. Aesthetic materials of the arts in literature, music, and the space arts. Form and types of form. Meaning in the arts. Interrelations of the arts. Lectures, discussions, reports. (Same as A-H 592.)

GROUP C**PHI 550 PHILOSOPHICAL PROBLEMS IN KNOWLEDGE AND REALITY. (3)**

Critical examination of issues regarding the foundations of knowledge, the nature of reality and the relation between the two. Evidence, belief, certainty, perception and justification will be among problems considered. Understandings of truth, existence, causality, freedom, time, space and matter will also be attended to. Prereq: PHI 100, 260, 270, or 350 or the consent of the instructor.

PHI 560 PHILOSOPHY OF SCIENTIFIC METHOD. (3)

An examination of the logical and epistemological foundations of empirical science, including fundamentals of concept formation, criteria of cognitive significance, issues of explanation, interpretation, and prediction, and testing and confirmation of theories and laws. Prereq: PHI 100, 120, or 350 or the consent of the instructor.

PHI 561 PHILOSOPHICAL PROBLEMS IN THE NATURAL SCIENCES (Subtitle required). (3)

A systematic examination of selected conceptual and/or metaphysical problems in the natural sciences. Possible topics include: reductionism, teleology, causality and determinism, the structure of space-time, and the "anthropic principle" in cosmology. Prereq: PHI 100, 120, or 350 or the consent of the instructor.

PHI 562 PHILOSOPHICAL PROBLEMS IN THE SOCIAL AND BEHAVIORAL SCIENCES. (3)

An examination of various methodological issues and broader philosophical questions of special concern in the social sciences. Among the topics to be studied: the structure of theories and the roles of mathematics and experimentation in the social sciences, the possibility of an objective or value free social science, and the conceptions of human nature presupposed by different schools of social science. Prereq: PHI 100, 120, or 350 or the consent of the instructor.

PHI 565 PHILOSOPHY OF LANGUAGE. (3)

An investigation of problems current in the philosophy of language such as meaning and

reference, the nature of analysis, linguistic relativity and the relation of linguistics to philosophy. Prereq: PHI 320 or 350 or the consent of the instructor.

PHI 570 PHILOSOPHY OF HISTORY. (3)

An examination of the theories and methods utilized by historians with special attention to the problems of laws and explanations in history, the nature of historical knowledge and narrative, and the roles of causal judgments and historical understanding. Attention will also be given to theoretical interpretations of history as offered by Marx, Hegel, Toynbee and others. Prereq: PHI 100, 260, or 270 or the consent of the instructor.

PHI 575 PHILOSOPHY OF MIND. (3)

An examination of problems current in the philosophy of mind, such as the concept of person, the relation of mind and body, the relation of minds and machines, knowledge of other minds, and the roles of dispositions and volitions in human action. Attention will be given to the philosophical analysis of such psychological categories as consciousness, feeling, emotion, perception, imagination, thinking and will. Prereq: PHI 100 or 350 or the consent of the instructor.

GRADUATE SEMINARS***PHI 630 SEMINAR IN VALUE THEORY. (3)**

A specialized graduate course in value theory that treats the history of value theoretic issues and doctrines, or emphasizes contemporary methodological discussions, or examines the concrete societal implications of major theories, or combines these approaches. May be repeated to a maximum of fifteen credits under different subtitles. Prereq: Consent of instructor.

***PHI 650 SEMINAR IN METAPHYSICS AND EPISTEMOLOGY (Subtitle required). (3)**

A specialized advanced study of topics in traditional areas of metaphysics and epistemology or of more contemporary topics, some of which may cut across or even challenge the framework of those traditional domains. Topics may include such issues as the nature of human action, problems of reference and modality, conceptions of time and space, and the sociology of knowledge. May be repeated to a maximum of fifteen credits under different subtitles. Prereq: Graduate standing in PHI or consent of instructor.

***PHI 680 SPECIAL TOPICS IN PHILOSOPHY (Subtitle required). (3)**

Studies in philosophical problems which either cut across or lie outside the standard areas of philosophical inquiry. May be repeated to a maximum of fifteen credits under different subtitles. Prereq: Graduate standing in PHI or consent of instructor.

***PHI 700 SEMINAR IN ANCIENT PHILOSOPHY (Subtitle required). (3)**

Intensive study of original works of such major classical philosophers as Plato and Aristotle. May be repeated to a maximum of fifteen credits under different subtitles. Prereq: Graduate standing in PHI or consent of instructor.

PHI 705 SEMINAR IN MEDIEVAL PHILOSOPHY. (3)

An intensive study of the issues treated by one or more medieval philosophers, e.g., Augustine, Aquinas, Scotus or Ockham. May be repeated to a maximum of six credits. Prereq: PHI 506.

***PHI 710 SEMINAR IN MODERN PHILOSOPHY (Subtitle required). (3)**

Intensive study in the major works of such prominent philosophers of modern times as Descartes, Locke, Hume, Kant, and Hegel. May be repeated to a maximum of fifteen credits under different subtitles. Prereq: Graduate standing in PHI or consent of instructor.

***PHI 715 SEMINAR IN RECENT PHILOSOPHY (Subtitle required). (3)**

Intensive study of major philosophers or philosophical topics of the 20th-21st centuries. May be repeated to a maximum of fifteen credits under different subtitles. Prereq: Graduate standing in PHI or consent of instructor.

PHI 740 PROSEMINAR ON TEACHING METHODS. (1)

An introduction to teaching methods for graduate students.

PHI 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

PHI 755 TUTORIAL IN INTERDISCIPLINARY ISSUES. (1-6)

As a tutorial, this course is structured individually to a student's research and study projects. Topics and issues are to be chosen and pursued in work that integrates philosophical methods and ideas within other disciplinary areas. May be repeated to a maximum of nine credits. Prereq: Approval of the Student's Advisory Committee.

PHI 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

PHI 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

PHI 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

***PHI 790 RESEARCH IN PHILOSOPHY. (3)**

This course is primarily intended for advanced students who desire and are prepared to do research in philosophy. May be repeated to a maximum of 15 credits.

PHR Pharmacy

PHR 776 SEMINAR IN PHARMACEUTICAL SCIENCES I. (1)

Reports and discussion of pertinent research and literature in the pharmaceutical sciences. Required of all graduate students. Prereq: Graduate standing.

PHR 910 PATIENT-CENTERED CARE EXPERIENCE 1. (3)

This is the first course in the six-semester Patient-Centered Care Experience (PaCE) course sequence that is part of the pre-APPE curriculum. The PaCE course structure integrates PY 1, PY 2, and PY 3 students into concurrent weekly laboratory sessions and intermittent complementary experiential fieldwork experiences. The course is designed to assist in developing the knowledge, skills, and attitudes needed to fulfill the professional and technical responsibilities necessary to provide patient-centered care and manage the medication use system. Prereq: Acceptance into the UK College of Pharmacy Professional Doctor of Pharmacy degree program. The experiential component requires the student to be registered with the Kentucky Board of Pharmacy as a Pharmacy Intern.

PHR 911 CELLS AND MOLECULES. (3)

This course covers the various tasks performed by cell components and the mechanisms used to integrate their actions. The course also covers the chemistry of biomolecules that are essential for structure and function of prokaryotic and eukaryotic cells including discussions of drug metabolism, energy generation, and information storage and transmission. The course will be taught in a blended or hybrid format that requires that students accept accountability for learning. Prereq: Admission to the first year, College of Pharmacy.

PHR 912 FOUNDATIONS IN PHARMACEUTICAL SCIENCES I. (3)

The goal of this course is to introduce students to the principles that underlie drug design and delivery. The course is divided into three components; 1) introduction to the principles of pharmacokinetics and drug delivery; 2) introduction to the principles of medicinal chemistry (drug design); and 3) introduction to the principles of pharmacology (drug action). Prereq: Admission into the College of Pharmacy.

PHR 913 WELLNESS AND HEALTH PROMOTION I. (3)

A course designed to integrate and apply concepts of patient-centered care that focuses on general health, wellness, and disease prevention and appropriate self-care therapy for commonly encountered conditions and symptoms. Patient assessment and decision-making skills for ambulatory patient triage; appropriate health and wellness interventions for the purpose of general wellbeing and prevention of disease; and the recommendation and appropriation of appropriate non-pharmacologic and pharmacologic non-prescription therapies for common conditions are emphasized. The description of various health promotion concepts and theorem as they relate to the understanding and influence of patient behaviors will also be underscored. Prereq: Enrollment in UK College of Pharmacy PharmD program.

PHR 914 CLINICAL REASONING. (2)

Clinical Reasoning introduces students to: 1) general concepts of thought processes used in problem-solving from novice to expert thinking; 2) the Pharmacists' Patient Care Process as an anchor that students can apply to any drug-related problem throughout the curriculum; 3) develops consistent habits framing the essential questions of a case; 4) concise, professional-level writing and speaking communication skills providing logic-driven solution(s) to a patient's drug related problem; and 5) critical self-assessment and reflection on how one can improve reasoning and communication performance. (Note: course is 12 weeks long.) Prereq: Admission into the College of Pharmacy first year.

PHR 915 PHARMACY AS A PROFESSION. (5)

This course provides an introduction to the profession of pharmacy and its societal context. Legal and ethical standards are introduced along with the historical evolution of the field. Contemporary issues are introduced and selected methods for communicating with patients and other professionals are emphasized. Prereq: Admission to College of Pharmacy year one.

PHR 920 PATIENT-CENTERED CARE EXPERIENCE 2. (3)

This is the second course in the six-semester Patient-Centered Care Experience (PaCE) course sequence that is part of the pre-APPE curriculum. The PaCE course structure integrates PY 1, PY 2, and PY 3 students into concurrent weekly laboratory sessions and intermittent complementary experiential fieldwork experiences. The course is designed to assist in developing the knowledge, skills, and attitudes needed to fulfill the professional and technical responsibilities necessary to provide patient-centered care and manage the medication use system. Prereq: PaCE1 (PHR 910). Coreq: PHR 923, PHR 926, PHR 927. The experiential component requires the student to be registered with the Kentucky Board of Pharmacy as a Pharmacy Intern.

PHR 921 KINETICS AND DYNAMICS. (4)

Pharmacokinetics is the study of drug movement from its site of administration, to its distribution in the body and its elimination (via excretion and metabolism) from the body. Pharmacodynamics is the study of timecourse of drug response and those factors associated with the clinical outcome. This course provides the mathematical foundation for describing physiological processes in the body that allow the prediction of how individual variations,

concurrent therapy, disease states, non-linear handling and other factors can and do affect steady state drug and metabolite levels, drug dosing, dosing intervals and dosing rates in patients. Prereq: Completion of fall semester of first year Pharmacy. Functional knowledge of physiology and algebra/calculus.

PHR 922 FOUNDATIONS IN PHARMACEUTICAL SCIENCE II: PHARMACEUTICS AND BIOPHARMACEUTICS. (3)

The goal of this course is to introduce students to the principles that underlie drug delivery. The course is divided into three components: 1) basics of drug preformulation, including solubility and stability; 2) dosage form design and properties; and 3) formulation and manufacturing of dosage forms.

PHR 923 WELLNESS AND HEALTH PROMOTION II. (3)

To develop pharmacists who can develop patient-centered care that focuses on general health, wellness, and disease prevention and who can recommend appropriate self-care therapy for commonly encountered conditions and symptoms. Prereq: Completion of PY 1 fall semester.

PHR 926 INTEGRATED DRUGS AND DISEASE 1: INFECTIOUS DISEASES. (4)

This course will describe the pharmacology, medicinal chemistry, pathophysiology, and therapeutics associated with of commonly encountered infectious diseases so that students can design and manage drug-related care plans for patients with these disease states. Prereq: Completion of the first semester of coursework at the College of Pharmacy.

PHR 927 INTEGRATED DRUGS AND DISEASE 1: GI AND NUTRITION. (2)

Course will describe the pharmacology, medicinal chemistry, pathophysiology, and therapeutics associated with of commonly encountered gastrointestinal and nutritional disorders so that students can design and manage drug-related care plans for patients with these disease states. Prereq: Successful completion of fall semester PY 1 courses in the PharmD program.

PHR 928 INTRODUCTORY PHARMACY PRACTICE EXPERIENCE I (AMBULATORY CARE). (2)

This is the first concentrated course in the Experiential Education program designed to provide students a structured, supervised program of participation in the practice of pharmacy and the clinical use of drugs in an ambulatory care setting. The primary goal is to provide early exposure to the philosophy and practice of ambulatory pharmacy and clinical use of drugs within a community pharmacy. During this rotation, each student will participate in all aspects of pharmacy practice within the community pharmacy, including medication use systems and direct patient care. They will gain experience in problem solving and application of didactic information learned in the classroom and patient care laboratory. Prereq: Successful completion of PY 1 year.

PHR 929 INTRODUCTORY PHARMACY PRACTICE EXPERIENCE I (INSTITUTIONAL). (2)

This is the first concentrated course in the Experiential Education program designed to provide students a structured, supervised program of participation in the practice of pharmacy and the clinical use of drugs in an institutional setting. The primary goal is to provide early exposure to the philosophy and practice of institutional pharmacy and clinical use of drugs within a hospital pharmacy. During this rotation, each student will participate in all aspects of pharmacy practice within the hospital pharmacy, including medication use systems and direct patient care. They will gain experience in problem solving and application of didactic information learned in the classroom and patient care laboratory. Prereq: Successful completion of PY 1 year.

PHR 930 PATIENT-CENTERED CARE EXPERIENCE 3. (3)

This is the third course in the six-semester Patient-Centered Care Experience (PaCE) course sequence that is part of the pre-APPE curriculum. The PaCE course structure integrates PY 1, PY 2, and PY 3 students into concurrent weekly laboratory sessions and intermittent complementary experiential fieldwork experiences. The course is designed to assist in developing the knowledge, skills, and attitudes needed to fulfill the professional and technical responsibilities necessary to provide patient-centered care and manage the medication use system. Prereq: PaCE 2 (PHR 920). Coreq: PHR 936, PHR 937, PHR 938. The experiential component requires the student to be registered with the Kentucky Board of Pharmacy as a Pharmacy Intern.

PHR 933 PHARMACEUTICAL OUTCOMES, POLICY AND PUBLIC HEALTH. (3)

This course provides an overview of the interaction between pharmaceuticals/pharmacists and two disciplines: public health and public policy. The course will begin with an introduction to public health, including an overview of public health metrics and research methods. The rest of the course is devoted to public policy formulation, implementation and analysis. The impact of various health-related policies will be explored from local, state, national and global perspectives. The course is designed to develop knowledge and skills related to population health and health policy, with specific emphasis on policies associated with pharmaceuticals. A variety of educational methods will be employed, including "live" and electronic didactic lectures, care-based projects, and simulated health policy development/analysis activities. Prereq: PHR 913 Wellness and Health I, PHR 914 Clinical Reasoning, PHR 915 Pharmacy as a Profession.

PHR 936 INTEGRATED DRUGS AND DISEASES 2: NEUROLOGY. (4)

This course integrates knowledge from distinct scientific disciplines (pharmacology, medicinal chemistry, pathophysiology and therapeutics) to progressively lead students toward understanding, mastering and designing patient care plans for patients with commonly encountered

neurological diseases. The method of teaching and learning employed in this course will challenge the student to develop independent thought processes and self-directed learning skills. Prereq: Successful completion of PY1 and Fall PY2 courses in the PharmD program.

PHR 937 INTEGRATED DRUGS AND DISEASES 2: RHEUMATOLOGY. (2)

[This course meets for 4 weeks – 1/4 semester.] This course will describe the pathophysiology, pharmacology, medicinal chemistry, therapeutics and non-drug therapies associated with rheumatic diseases so that students can assess the specific disease, design and manage both lab assays and other indicative tests and drug- as well as non-drug related care plans for patients with these disease states. Prereq: Completion of the PY1 year.

PHR 938 INTEGRATED DRUGS AND DISEASES 2: ENDOCRINE DISEASES. (4)

[This course meets for 8 weeks – 1/2 semester.] This course will describe the pharmacology, medicinal chemistry, pathophysiology, and therapeutics associated with commonly encountered endocrine diseases so that students can design and manage drug-related care plans for patients with these disease states. Prereq: Successful completion of the PY1 curriculum.

PHR 940 PATIENT-CENTERED CARE EXPERIENCE 4. (3)

This is the fourth course in the six-semester Patient-Centered Care Experience (PaCE) course sequence that is part of the pre-APPE curriculum. The PaCE course structure integrates PY1, PY2, and PY3 students into concurrent weekly laboratory sessions and intermittent complementary experiential fieldwork experiences. The course is designed to assist in developing the knowledge, skills, and attitudes needed to fulfill the professional and technical responsibilities necessary to provided patient-centered care and manage the medication use system. Prereq: PaCE3 (PHR930). Coreq: PHR 946, PHR 947, PHR 948. The experiential component requires the student to be registered with the Kentucky Board of Pharmacy as a Pharmacy Intern.

PHR 945 LEADERSHIP IN PHARMACY. (3)

This course will include multiple modes of instruction (didactic lecture, group assignment, student presentations, and in-class discussion) to introduce the key concepts of effective leadership. Student participation will be paramount to the success of the course and to the students' experience. This 3 credit course provides an introduction to leadership in pharmacy practice. It includes an introduction to leadership, leadership fundamentals, leadership skills in various settings and discussions with professional leaders as well as assignments requiring interaction with pharmacy leaders. Prereq: Successful entry into the spring semester of the second professional year (PY2).

PHR 946 INTEGRATED DRUGS AND DISEASES 3: CARDIOLOGY. (6)

This course will describe the physiology, pharmacology, medicinal chemistry, pathophysiology, and therapeutics associated with commonly encountered disease states in cardiology so that students can design and manage drug-related care plans for patients with these disease states. Prereq: Successful completion of ALL required courses in the Doctor of Pharmacy degree program sequence leading up to IDD 3: Cardiology.

PHR 947 INTEGRATED DRUGS AND DISEASES 3: GENITOURINARY. (2)

[This course meets for 8 weeks – 1/2 semester.] This course will describe the pharmacology, medicinal chemistry, pathophysiology, and therapeutics associated with commonly encountered genitourinary (GU) disorders so that students can design and manage drug-related care plans for patients with these disease states. Prereq: Successful completion of PY1 courses in the PharmD program.

PHR 948 INTEGRATED DRUGS AND DISEASES 3: PULMONARY. (3)

[This course will meet twice per week for 12 weeks.] A cornerstone of good pharmaceutical care is advanced pharmacotherapy competency. The successful practitioner must critically analyze knowledge from the areas of epidemiology, pathology, pathophysiology, pharmacology, drug therapy, and monitoring to assure optimal drug efficacy and safety in conjunction with cost-effectiveness. Integration of pathology, pharmacology, and pharmacokinetic/dynamic principles is necessary in order to design a rational treatment approach to pulmonary disease states. This course enables Doctor of Pharmacy candidates to obtain a comprehensive and intensive overview of these core areas for commonly encountered pulmonary diseases. Students will be able to use the acquired knowledge to develop and implement patient-specific therapeutic plans. Prereq: Successful completion of all previous IDD courses; in overall good standing.

PHR 950 PATIENT-CENTERED CARE EXPERIENCE 5. (4)

This is the fifth course in the six-semester Patient-Centered Care Experience (PaCE) course sequence that is part of the pre-APPE curriculum. The PaCE course structure integrates PY1, PY2, and PY3 students into concurrent weekly laboratory sessions and intermittent complementary experiential fieldwork experiences. The course is designed to assist in developing the knowledge, skills, and attitudes needed to fulfill the professional and technical responsibilities necessary to provided patient-centered care and manage the medication use system. Prereq: PaCE4 (PHR 940). Coreq: PHR 956, PHR 957, PHR 954. The experiential component requires the student to be registered with the Kentucky Board of Pharmacy as a Pharmacy Intern.

PHR 960 PATIENT-CENTERED CARE EXPERIENCE 6. (4)

This is the sixth course in the six-semester Patient-Centered Care Experience (PaCE) course sequence that is part of the pre-APPE curriculum. The PaCE course structure integrates PY1, PY2, and PY3 students into concurrent weekly laboratory sessions and intermittent complementary experiential fieldwork experiences. The course is designed to assist in developing the

knowledge, skills, and attitudes needed to fulfill the professional and technical responsibilities necessary to provided patient-centered care and manage the medication use system. Prereq: PaCE5 (PHR 950). Coreq: PHR 966, PHR 967. The experiential component requires the student to be registered with the Kentucky Board of Pharmacy as a Pharmacy Intern.

PHS Pharmaceutical Science

PHS 510 MODERN METHODS IN PHARMACEUTICAL ANALYSIS. (5)

A course which deals with the application of modern analytical methods, primarily instrumental methods, in the determination of the strength, purity, and quality of drugs and pharmaceuticals. Laboratory exercises include analysis of raw materials and finished dosage forms. Lecture, three hours; laboratory, four hours. Prereq: CHE 226.

PHS 530 RADIOPHARMACEUTICS. (3)

Basics of radioactive decay and detection. Labelling of molecules and cells with radionuclides. Imaging systems and clinical aspects of radiopharmaceuticals. Radioanalytical applications in pharmaceutical sciences, including positron tomography and gamma scintigraphy. Development of new radiopharmaceuticals and absorbed dose calculations. The principles of radiation safety and radiobiology. Prereq: Consent of instructor.

PHS 545 STERILE PARENTERALS AND DEVICES. (2-3)

The course will describe the fundamental concepts, principles and techniques involved in the characterization, development, evaluation and preparation of sterile products. Lecture, two credits; lecture with laboratory, three credits. Prereq: Consent of instructor.

PHS 556 PRINCIPLES OF DRUG DESIGN. (3)

Introduction to medicinal chemistry will be explored through rational biochemical and physical organic chemical approaches to drug design, action and development. Structural features, physical properties, mechanism of action and metabolism of drug like molecules, forces that govern interaction of drug-like molecules with their targets, enzyme mechanisms and inhibition and xenobiotic metabolism will be illustrated with specific examples showing how drugs function at the molecular level. Prereq: CHE 230, CHE 232, BIO 148, BIO 152. (Same as BCH 556.)

PHS 612 QUANTITATIVE PHARMACODYNAMICS: PHARMACOKINETICS. (3)

Quantitative treatment of dynamics of drug absorption, distribution, metabolism and excretion, including development of both mathematical models and model-independent approaches for describing these processes. Prereq: MA 114 and consent of instructor. (Same as PHA 612.)

PHS 630 PHARMACEUTICAL RATE PROCESSES. (3)

Kinetics of reactions of pharmaceutical interest; mechanisms of drug decomposition and theoretical approaches to stabilization and preservation; accelerated stability analysis. Prereq: MA 213, CHE 538, CHE 548 and PHR 631.

PHS 631 EQUILIBRIUM PHENOMENA IN PHARMACEUTICAL SYSTEMS. (3)

An advanced study in special topics of a physical chemical nature which are applicable to pharmacy, with special emphasis on physical properties and molecular structure, solubility, complexation and equilibria in solution. Prereq: Physical chemistry.

PHS 632 THE PRACTICE OF DRUG METABOLISM. (3)

The purpose of this course is to teach students about practical aspects of drug metabolism research. This includes addressing the function and purpose of drug metabolism studies, how those studies are carried out, why and how they are done, how metabolites are characterized, and some discussion of the limits and utility of the various approaches used in drug metabolism research.

PHS 649 ADVANCED MOLECULAR PHARMACOLOGY. (2)

This course will provide in-depth coverage of the molecular pharmacology of growth factors, transcription factors, receptors, and ion channels. Emphasis will be placed on both the normal functions of these cell-signaling molecules and perturbations that result in several prevalent human diseases, including cancer, Alzheimer's, diabetes, osteoporosis, and inherited human illnesses. Students will be introduced to experimental approaches to diagnosing and treating these illnesses in the light of our evolving knowledge of molecular pharmacology. Prereq: IBS 601-606 or consent of instructor. (Same as PHA/TOX 649.)

PHS 660 BIOSYNTHESIS OF NATURAL PRODUCTS. (3)

An overview of the biochemical pathways leading to compounds called natural products/secondary metabolites. Prereq: Two semesters of organic chemistry. (Same as BCH 620/PLS 642.)

PHS 662 BIOORGANIC MECHANISMS. (3)

An in-depth discussion on the bioorganic chemistry aspects of the active sites of enzymes and drug receptors, the molecular basis of drug design, and principles of drug metabolism. Within these topics, the mode of action of some of the major coenzymes and drugs will be discussed from a mechanistic chemistry point of view. Prereq: CHE 538, CHE 633, BCH 501 or consent of instructor.

PHS 663 MOLECULAR NEUROBIOLOGY OF ABUSED DRUGS. (3)

This course is designed to review major topics, concepts and issues pertinent to the molecular neurobiology of drug abuse and dependence. The proposed course of study will provide a strong

background in neuroscience and students will be informed about current trends in our understanding of the molecular neurobiology of drug abuse research. Prereq: IBS 601 or consent of instructor.

***PHS 711 RESPONSIBLE CONDUCT OF RESEARCH. (2)**

Research scientists require an understanding of the fundamental principles guiding the ethical and responsible conduct and reporting of their research. Through case studies and reviews of the current literature, students will gain a greater understanding of the ethical and regulatory considerations in research design, conduct, and publication as well as the regulatory landscape governing fiscal compliance, scientific misconduct, research involving vulnerable populations, tissue banking, genetics/genomics, intellectual property, privacy, and data security. The importance of inclusion and diversity of individuals from underrepresented groups, those with disabilities, and individuals from economically disadvantaged backgrounds as investigators is also discussed. Students engage in didactic lectures, small-group breakout discussion sessions, and out of class learning activities to facilitate in-depth training and greater understanding of the relevant issues. Prereq: Consent of instructor.

PHS 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

PHS 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

PHS 750 PHARMACEUTICAL SCIENCES JOURNAL CLUBS. (1)

Discussion and presentations of foundation or current literature and emerging topics in pharmaceutical sciences. Topics vary by section. May be repeated to a maximum of 5 credit hours. Prereq: Consent of instructor.

PHS 760 TOPICS IN PHARMACEUTICAL SCIENCES. (1-4)

Pharmaceutical sciences which are not being covered in other courses. May be repeated to a maximum of 24 hours. Prereq: Consent of instructor.

PHS 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

PHS 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

PHS 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

PHS 778 SEMINAR IN PHARMACEUTICAL SCIENCES II. (1)

Reports and discussion of pertinent research and literature in a disciplinary area of the pharmaceutical sciences. May be repeated to a maximum of eight credits. Prereq: Graduate standing.

PHS 780 SPECIAL PROBLEMS IN PHARMACEUTICAL SCIENCES. (1-6)

Selected problems of laboratory or literature nature in which a student pursues a topic of interest to him under the supervision of a faculty member particularly qualified in that area. May be repeated once. Prereq: Consent of instructor.

PHS 790 RESEARCH IN PHARMACEUTICAL SCIENCES. (1-12)

Research work to be conducted in selected areas of pharmaceutical sciences. May be repeated indefinitely. Prereq: Approval of student's special committee and consent of instructor.

PHS 911 PHYSIOLOGICAL BASIS FOR THERAPEUTICS I. (4)

Integrated concepts of human organ system functions with particular emphasis on the physiology of the central and autonomic nervous system, the cellular and molecular mechanisms of neurotransmission and transduction and the response of target tissues. The course includes an introduction to the pathophysiology of each system and the pharmacodynamics of therapeutic agents as a framework for discussion. Variable mixtures of lecture, group discussion and independent study. Prereq: Admission to the first year, College of Pharmacy.

PHS 912 PHYSIOLOGICAL CHEMISTRY AND MOLECULAR BIOLOGY I. (3)

The first of a two course sequence covering integrated concepts of human biochemistry from a physiological viewpoint, functional group chemistry essential to biology, key structural and functional relationships of the biomolecules in living systems, energy metabolism emphasizing inter organ relationships and an in depth discussion of information storage and transfer. The course includes an introduction to common metabolic diseases and the therapeutic agents used in those diseases as a framework for discussion. Variable mixture of lecture, group discussion and independent study. Prereq: Admission to the first year, College of Pharmacy.

PHS 914 BASIC PRINCIPLES OF PHARMACEUTICAL SCIENCE: PHARMACEUTICS AND BIOPHARMACEUTICS I. (3)

The first of a two course sequence in basic principles of Pharmaceutical Science concentrating on absorption, distribution, metabolism, excretion and bioavailability of drugs; and an introduction to dosage forms, oral drug delivery systems, drug solutions and drug solids, bioequivalence determinations and ratings, and official compendia. Variable mixtures of lectures, discussions and independent study. Prereq: Admission to the first year, College of Pharmacy.

PHS 921 PHYSIOLOGICAL BASIS FOR THERAPEUTICS II. (4)

A continuation of PHS 911 covering integrated concepts of human organ system functions with particular emphasis on the physiology of the cardiovascular, renal, pulmonary and endocrine systems. The course includes an introduction to the pathophysiology of each system and the pharmacodynamics of prototype therapeutic agents as a framework for discussion. Variable mixture of lecture, group discussions and independent study. Prereq: PHS 911 and admission to the first year, College of Pharmacy.

PHS 922 PHYSIOLOGICAL CHEMISTRY AND MOLECULAR BIOLOGY II. (3)

A continuation of PHS 912. Variable mixture of lectures, group discussion and independent study. Prereq: Admission to the first year, College of Pharmacy and PHS 912.

PHS 924 BASIC PRINCIPLES OF PHARMACEUTICAL SCIENCE: PHARMACEUTICS AND BIOPHARMACEUTICS II. (3)

The second of a two course sequence in the basic principles of Pharmaceutical Science concentrating on modified release oral dosage forms; modified release parenteral dosage forms; nasal, buccal, rectal, vaginal and ophthalmic delivery systems; aerosols and pulmonary delivery systems, and the drug development process. Variable mixture of lecture, group discussion and independent study. Prereq: Admission to the first year, College of Pharmacy.

PHS 931 PHARMACOLOGICAL BASIS FOR THERAPEUTICS: NERVOUS SYSTEM. (5)

A study of human disease processes and rational pharmacotherapeutics relating to the autonomic, central and peripheral nervous system including a discussion of the factors influencing the development of substance dependence and the strategies for risk reduction. Emphasis is placed on the principles of pathophysiology, pharmacology, toxicology and therapeutics, the incorporation of these principles in the clinical application of modern drug therapy, and how these principles can be utilized in pharmacy practice. Variable mixture of lecture, group discussion and independent study. Prereq: Admission to the second year, College of Pharmacy.

PHS 932 PHARMACOLOGICAL BASIS FOR THERAPEUTICS: IMMUNOLOGY AND BIOTECHNOLOGY. (3)

A study of the immune system, immunopathologies and select autoimmune diseases and their treatment. Includes a discussion of immunizations, immunology of cancer, neoplasias and an introduction to antineoplastic therapy. The course concludes with a discussion of biotechnology and its application to the production and use of pharmaceuticals, diagnostic agents and advanced therapies. Variable mixture of lecture, group discussion and independent study. Prereq: Admission to the second year, College of Pharmacy.

PHS 933 PHARMACOLOGICAL BASIS FOR THERAPEUTICS: ENDOCRINE SYSTEMS. (3)

A study of the pathophysiology of the major disorders affecting the endocrine system concentrating on the pharmacology of the therapeutic agents used to treat those disorders, including discussions of the rational use of endocrine agents and their congeners in the treatment of non-endocrine diseases. Variable mixture of lecture, group discussion and independent study. Prereq: Admission to the second year, College of Pharmacy.

PHS 944 BASIC PRINCIPLES OF MEDICINAL CHEMISTRY. (3)

The rational design of molecules to produce safe and effective therapeutic responses in humans; molecular changes in drug molecules that affect affinity and activity at drug receptors and influence the absorption, distribution, metabolism, excretion and stability of drugs; and the properties of drug molecules which are important in their formulation into drug products. Variable mixture of lecture, group discussion and independent study. Prereq: Admission to the second year, College of Pharmacy.

PHS 947 APPLIED BIOPHARMACEUTICS AND PHARMACOKINETICS. (4)

The theoretical and practical considerations of the processes of drug absorption (including dosage formulation), distribution, metabolism and excretion and the mathematical models that describe these events including the calculation of dosage regimens for patients with problems ranging from simple to complex. A variable mixture of computer-assisted learning, formal lecture, interactive lecture and problem-based learning laboratory experiences. Prereq: Admission to the second year, College of Pharmacy.

PHS 951 PHARMACOLOGICAL BASIS FOR THERAPEUTICS: CARDIOPULMONARY AND RENAL SYSTEMS. (5)

A study of the pathophysiology of the major disorders affecting the cardiovascular, renal and respiratory system concentrating on the pharmacology of the therapeutic agents used to treat those disorders. Variable mixture of lecture, group discussion and independent study. Prereq: Admission to the third year, College of Pharmacy.

PHY Physics

Note: It is assumed that all prerequisites include, in addition to any specific course listed, the phrase “or equivalent,” or “consent of instructor.”

PHY 120 HOW THINGS WORK. (3)

The close relationship between physical science, technology and our everyday lives will be illuminated by examination of the technology we purchase and use and by observations of natural phenomena we can make using only the informed mind and eye.

PHY 130 SCIENCE AND TECHNOLOGY FOR THE FUTURE. (3)

This course will explore the energy issues of today and tomorrow, including where the energy of the future will come from, energy independence, global warming, nuclear power, the potential of renewable energy sources, and the future of coal, showing how these are affected by history, geography, politics, technology, and the laws of physics and economics.

PHY 140 QUANTUM THEORY FOR EVERYONE. (3)

A lecture course to explore the surprising nature of the nano-world. Wave properties of matter, probabilistic interpretation, duality, causality, uncertainty principle and quantum entanglement. Technologies and discoveries which exploit quantum effects will be selectively covered.

PHY 151 INTRODUCTION TO PHYSICS. (3)

A lecture demonstration course covering the mechanics of solids, liquids, gases, heat, and sound. Credit is not given to students who already have credit for PHY 201, 211 or 231. Prereq: Two years of high school algebra, and an ACT math score of 19 or above, or a SAT math score of 515 or above, or MA 108R or higher.

PHY 152 INTRODUCTION TO PHYSICS. (3)

A lecture demonstration course covering electricity, magnetism, optics, atomic and nuclear physics. Credit is not given to students who already have credit for PHY 203, 213 or 232. Prereq: Two years of high school algebra or MA 108R.

PHY 160 PHYSICS AND ASTRONOMY FOR TEACHERS. (3)

The basics of electric circuits, magnetism, object motion, naked-eye astronomy and light behavior. The course is designed in conjunction with GLY 160 to provide basic concepts of earth science, astronomy and physics appropriate for elementary and middle school teachers. Both courses are taught with an emphasis on inquiry-based, laboratory activities. Lecture, one hour; laboratory, five hours per week.

PHY 170 BLACK HOLES AND TIME TRAVEL. (3)

The course will discuss basic concepts in physics prior to the 20th century and the backdrop to the emergence of the Special Theory of Relativity. Elements of Special and General Relativity will be discussed at a non-technical level. These concepts will be used to explain how very massive stars inevitably collapse to form black holes. Their observational signatures will be discussed. The work of Hawking leading to the prediction that black holes emit faint radiation will be explained. Finally, the possibility of existence of wormholes leading to time travel will be explored.

PHY 210 SPECIAL LABORATORY FOR GENERAL PHYSICS PHY 201. (1)

Special laboratory for students who have completed PHY 201 and later determine that they need an accompanying laboratory. Laboratory, two hours per week. Prereq: PHY 201.

PHY 211 GENERAL PHYSICS. (5)

First part of a two-semester survey of classical and modern physics, focusing on the motion of solids and fluids as governed by Newton's Laws and by the conservation laws of energy, momentum, and angular momentum. Lecture, two hours; recitation, two hours; laboratory, two hours. Credit is not given to students who already have credit for PHY 231 and 241. Prereq: A working knowledge of algebra as obtainable in MA 109 or MA 110 or MA 112, or an ACT math score of 25 or above, or a SAT math score of 590 or above.

PHY 212 SPECIAL LABORATORY FOR GENERAL PHYSICS PHY 203. (1)

Special laboratory for students who have completed PHY 203 and later determine that they need an accompanying laboratory. Laboratory, two hours per week. Prereq: PHY 203.

PHY 213 GENERAL PHYSICS. (5)

Continuation of PHY 211, covering electrostatics, de circuits, magnetism, Maxwell's Equations, electromagnetic radiation, light and some modern physics. Lecture, two hours; recitation, two hours; laboratory, two hours. Credit is not given to students who already have credit for PHY 232 and 242. Prereq: PHY 211 or equivalent.

PHY 228 OPTICS, RELATIVITY AND THERMAL PHYSICS. (3)

A lecture and problems course covering the principles of geometrical optics, special relativity, and thermal physics. Prereq or concur: MA 114.

PHY 231 GENERAL UNIVERSITY PHYSICS. (4)

First part of a two-semester survey of classical physics. Consequences of the principles of mechanics are developed conceptually, analytically and quantitatively. Lecture, three hours; recitation, one hour per week. Prereq or concur: MA 113.

PHY 232 GENERAL UNIVERSITY PHYSICS. (4)

A general course covering electricity, magnetism, electromagnetic waves and physical optics. Lecture, three hours; recitation, one hour per week. Prereq: PHY 231; concur: MA 213.

PHY 241 GENERAL UNIVERSITY PHYSICS LABORATORY. (1)

A laboratory course offering experiments in mechanics and heat, framed in a small group environment that requires coordination and team work in the development of a well-written lab report. Prereq or concur: PHY 231.

PHY 242 GENERAL UNIVERSITY PHYSICS LABORATORY. (1)

A laboratory course offering experiments in electricity, magnetism, and light, framed in a small group environment that requires coordination and team work in the development of a well written lab report. Prereq: PHY 241; concur: PHY 232.

PHY 306 THEORETICAL METHODS OF PHYSICS. (3)

A lecture and problems course on the applications in physics of vector calculus, Fourier series and transforms, special functions and asymptotic forms. Prereq or concur: MA 214.

*PHY 335 DATA ANALYSIS FOR PHYSICISTS. (2)

A computational methods course in the theory and techniques of data analysis and error propagation, with emphasis on applications common to the physical sciences: the treatment of statistical errors, the maximum-likelihood method, the chi-square distribution, and curve fitting. Students will learn computer programming, and they will prepare a set of analysis programs for use in subsequent lab courses. Concur: MA 213, PHY 242. (Same as STA 335.)

PHY 361 PRINCIPLES OF MODERN PHYSICS. (3)

An introduction to the foundations of quantum mechanics and selected topics in atomic, nuclear, particle, solid state, and statistical physics. Prereq: MA 213; PHY 232 or, with consent of instructor, PHY 213.

PHY 395 INDEPENDENT WORK IN PHYSICS. (1-3)

Students may select an approved topic for study under the direction of a faculty member. May be repeated to a maximum of 12 credits. Prereq: Major and a standing of 3.0 in the department.

PHY 401 G SPECIAL TOPICS IN PHYSICS AND ASTRONOMY FOR ELEMENTARY, MIDDLE SCHOOL AND HIGH SCHOOL TEACHERS. (1-4)

Selected topics in physics and astronomy of special interest to teachers will be discussed. When the course is offered, a specific title with specific credits, the number of hours in lecture-discussion and laboratory will be announced. Lecture/discussion, two-four hours; laboratory, zero-four hours. May be repeated to a maximum of eight credits. Prereq: Open only to elementary, middle school and high school teachers.

PHY 402G ELECTRONIC INSTRUMENTATION AND MEASUREMENTS. (3)

Elementary treatment of electronic circuits emphasizing laboratory work. Topics include AC circuits, filters, theory and operation of transistors and other semiconductor devices and a simple treatment of operational amplifiers. Lecture, two hours per week; laboratory, three hours per week. Prereq: PHY 242 or EE 305 or consent of instructor. (Same as EE 402G.)

PHY 404G MECHANICS. (3)

A lecture and problem course covering the fundamental laws of mechanics. Topics include Newton's Laws, Kepler's Laws, oscillatory motion and an introduction to Lagrangian methods. Prereq: PHY 232, or with permission of Director of Undergraduate Studies, PHY 213; concur: MA 214.

PHY 416G ELECTRICITY AND MAGNETISM. (3)

First of two lecture and problem courses covering: the theory of electrostatic fields in the presence of conductors and dielectric materials, magnetic fields due to steady currents in the presence of magnetic materials, electromagnetic induction, and electromagnetic fields due to time-varying currents. Prereq: PHY 306; MA 214 with a grade of C or better.

PHY 417G ELECTRICITY AND MAGNETISM. (3)

Second of two lecture and problem courses covering: the theory of electrostatic fields in the presence of conductors and dielectric materials, magnetic fields due to steady currents in the presence of magnetic materials, electromagnetic induction, and electromagnetic fields due to time-varying currents. Prereq: PHY 416G.

PHY 422 COMPUTATIONAL PHYSICS LABORATORY (3)

An introductory laboratory and lecture course covering the application of numerical methods to the solution of problems encountered in classical mechanics and electrostatics. Students will be expected to write computer programs, but no previous programming experience is required. Lecture, one hour; laboratory, four hours per week. Prereq: MA 214, PHY 404G.

PHY 435 INTERMEDIATE PHYSICS LABORATORY. (3)

An intermediate-level laboratory course emphasizing quantum phenomena in atomic, solid state and nuclear systems. Laboratory techniques include optical spectroscopy, gamma-ray and particle detection, atomic and nuclear collisions, and interferometry. This course satisfies the Graduation Writing Requirement. Prereq: PHY 335, PHY 361. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

PHY 460G HANDS-ON PHYSICS FOR MIDDLE SCHOOL AND HIGH SCHOOL TEACHERS. (2)

An exploration of classical and modern physics, in a laboratory setting. This course may be taken twice for credit. Prereq: PHY 228 and PHY 361.

PHY 472G INTERACTION OF RADIATION WITH MATTER. (3)

Basic aspects of the interaction of ionizing radiation with matter. Bohr atom, atomic spectra, radioactivity, energetics of decay. Sources of radiation, penetration of charged particles, electromagnetic radiation, and neutrons through matter; excitation and ionization processes; selected nuclear reactions; basic radiation detection and dosimetry. Prereq: PHY 213 or 232; MA 114 (may be taken concurrently); or equivalent. (Same as RAS/RM 472G.)

PHY 495 SENIOR THESIS. (3)

With mentoring from faculty member(s), advanced undergraduate students propose and execute an independent research project. A final report will be written and a presentation will be made in a forum such as a professional meeting, a student group such as a regional or national Society of Physics Students meeting, or a small group of faculty. May be repeated to a maximum of six credits. Prereq: Advanced standing.

PHY 504 ADVANCED MECHANICS. (3)

A continuation and extension of PHY 404G. Includes dynamics of a particle, rigid bodies, Lagrange's equations, constrained motions, and oscillations. Prereq: PHY 404G, MA 214.

PHY 506 METHODS OF THEORETICAL PHYSICS I. (3)

The course and its sequel (MA/PHY 507) are designed to develop, for first-year graduate students, familiarity with the mathematical tools useful in physics. Topics include curvilinear coordinates, infinite series, integrating and solving differential equations of physics, and methods of complex variables. Work with Green's functions, eigenvalues, matrices and the calculus of variations are included as a part of MA/PHY 506 and 507. Prereq: PHY 404G or equivalent. (Same as MA 506.)

PHY 507 METHODS OF THEORETICAL PHYSICS II. (3)

Continuation of MA/PHY 506. Fourier and Laplace Transforms, the special functions (Bessel, Elliptic, Gamma, etc.) are described. Work with Green's functions, eigenvalues, matrices and the calculus of variations are included as a part of MA/PHY 506 and 507. Prereq: MA/PHY 506. (Same as MA 507.)

PHY 508 COMPUTATIONAL PHYSICS. (3)

A laboratory and lecture course using computational and numerical methods to investigate different phenomena in selected topics of physics. Lecture 2 hours; laboratory, 2 hours per week. Prereq: PHY 361.

PHY 520 INTRODUCTION TO QUANTUM MECHANICS I. (3)

A lecture and problem course providing an introduction to the concepts and formalism of quantum mechanics. Primary emphasis is on the time-independent Schrodinger equation and its applications to simple systems such as the harmonic oscillator, the square-well potential, and the hydrogen atom without spin. Prereq: PHY 361, MA 214.

PHY 521 INTRODUCTION TO QUANTUM MECHANICS II. (3)

A continuation of PHY 520, introducing the quantum description of systems with spin, and approximation methods. Principles of quantum mechanics will be illustrated by their application to model systems selected from the fields of atomic, solid state, nuclear and particle physics. Prereq: PHY 520.

PHY 522 THERMODYNAMICS AND STATISTICAL PHYSICS. (3)

Temperature, heat, and entropy, and the Laws of Thermodynamics, as applied to simple systems. Introduction to statistical mechanics and the description of thermodynamic quantities in terms of ensemble averages. Prereq: PHY 361 and MA 214.

PHY 524 SOLID STATE PHYSICS. (3)

Introductory solid state physics with emphasis on the properties of electrons in crystals; crystal structure, crystal diffraction, reciprocal lattice, lattice vibrations and phonons, free electron theory, energy bands in solids, semiconductors. Prereq: PHY 520, or consent of instructor. Engineering standing required for EE 524. (Same as EE 524.)

PHY 525 CONDENSED MATTER PHYSICS. (3)

Optical, magnetic, and transport properties of metals, semiconductors, superconductors, and dielectrics; cooperative phenomena and phase transitions. Prereq: PHY 524 or consent of instructor.

PHY 535 ADVANCED PHYSICS LABORATORY. (3)

An advanced laboratory course emphasizing quantum phenomena in atomic, solid state and nuclear systems. Laboratory techniques include optical spectroscopy, gamma-ray and particle detection, optical pumping, atomic and nuclear collisions, and interferometer. Prereq: PHY 335, PHY 361. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

PHY 545 RADIATION HAZARDS AND PROTECTION. (3)

An analysis of common radiation hazards encountered in medicine, research, industry, and the environment. Regulations and procedures for the safe use of ionizing and nonionizing radiations. Lecture, two hours; laboratory, two and one-half hours. Prereq: PHY/RM 472G or consent of instructor. (Same as RM/RAS 545.)

PHY 546 GENERAL MEDICAL RADIOLOGICAL PHYSICS. (3)

The uses and dosimetric aspects of radiation in medicine will be analyzed, including many basic applications in the fields of diagnostic radiology physics, therapy physics, and nuclear medical physics. Prereq or concur: RM/PHY 472G or consent of instructor. (Same as RM/RAS 546.)

PHY 554 FUNDAMENTALS OF ATOMIC PHYSICS. (3)

A continuation of introductory quantum mechanics with application to atomic systems.

Topics include angular momentum, perturbation theory, variational principles, interaction of radiation with matter, atomic spectra and the Zeeman and Stark effects. Prereq: PHY 520.

PHY 555 FUNDAMENTAL NUCLEAR PHYSICS. (3)

Topics covered include nuclear systematics, the nucleon-nucleon-interaction, nuclear models, radioactivity, nuclear reactions, fission and fusion. Prereq: PHY 520.

PHY 556 FUNDAMENTAL PARTICLE PHYSICS. (3)

Introduction to elementary particle physics. Topics include: particle interactions and families, the quark model, symmetries and conservation laws, particle reactions and decays, quark dynamics, and elements of quantum chromodynamics and electroweak interactions. Prereq: PHY 520.

PHY 567 INTRODUCTION TO LASERS AND MASERS. (3)

Basic principles of laser action, atomic transitions; population inversion; two- and three-level systems; optical resonators; pumping methods; applications. Prereq: EE 360, EE 468G, or PHY 417G, or consent of instructor. (Same as EE 567.)

PHY 570 SEMINAR ON TEACHING PHYSICS. (1)

A seminar course for teaching assistants focused on developing the art and science of teaching physics. Journal articles, books and other texts will be studied to serve as sources of discussion about the teaching and learning activities in the Department of Physics and Astronomy. Prereq: Consent of instructor.

PHY 571 SEMINAR ON TEACHING PHYSICS LABORATORIES. (1)

A seminar course for teaching assistants focused on developing the art and science of teaching physics laboratories. Journal articles, books and other texts will be studied to serve as sources of discussion about the teaching and learning activities in the laboratory classes in the Department of Physics and Astronomy. Prereq: Consent of instructor.

PHY 591 ASTROPHYSICS I – STARS. (3)

The physics of stars from star formation to stellar death. Topics include stellar structure and evolution, energy generation and transport, the later stages of stellar evolution and stellar remnants. Prereq: PHY 361, PHY 416G, PHY 417G or consent of instructor. (Same as AST 591.)

PHY 592 ASTROPHYSICS II – GALAXIES AND INTERSTELLAR MATERIAL. (3)

The physics of galaxies and of the interstellar medium. Topics include galaxy formation, evolution and interaction, phases of the interstellar medium, and physical processes in the interstellar medium. Prereq: PHY 361, PHY 416G, PHY 417G or consent of instructor. (Same as AST 592.)

PHY 600 SELECTED TOPICS IN ADVANCED PHYSICS. (2-3)

An advanced seminar course on topics related to departmental research programs. Topics may include astrophysics, atomic physics, condensed matter physics, nuclear physics and particle physics. May be repeated to a maximum of nine hours. Prereq: Consent of instructor.

PHY 605 GRAVITY. (3)

An introduction to the general theory of relativity, covering tensor analysis, Einstein's equations, experimental tests, black holes, and cosmology. Prereq: PHY 504 and PHY 417G, or permission of instructor.

PHY 611 ELECTROMAGNETIC THEORY I. (3)

A lecture and problem course treating electrostatics, boundary conditions, potential problems, energy in electric and magnetic fields, magnetic materials and Maxwell's equations. Prereq: PHY 416G; MA 214.

PHY 613 ELECTROMAGNETIC THEORY II. (3)

Continuation and extension of PHY 611. Includes theory of electromagnetic waves and applications to optical phenomena and radiation. Special theory of relativity and the covariant treatment of Maxwell's equations will be discussed. Prereq: PHY 611.

PHY 614 QUANTUM MECHANICS I. (3)

A lecture and problem course dealing with the description of quantum systems in the forms of wave mechanics, matrix mechanics and state vectors. Also includes angular momentum and its addition, and approximation methods for bound states. Prereq: PHY 520.

PHY 615 QUANTUM MECHANICS II. (3)

Continuation of PHY 614 covering time dependent perturbation theory, symmetry and invariance principles, and elementary scattering theory including the method of partial waves. Prereq: PHY 614.

PHY 616 QUANTUM FIELD THEORY I. (3)

An introduction to field theory and many-body theory. Topics include path integral quantization, second quantization, relativistic field theory of bosons and fermions, Green's function and perturbation theory, field theories on the lattice, renormalization of scalar fields and applications to critical phenomena. Prereq: PHY 615, PHY 632.

PHY 624 CONDENSED MATTER THEORY. (3)

Electron band theory, lattice dynamics, electron-phonon and electron-electron interactions, superconductivity and superfluidity, Fermi liquid theory. Prereq: PHY 524, 614, 632.

PHY 630 TOPICS IN NUCLEAR AND INTERMEDIATE ENERGY PHYSICS (Subtitle required). (3)

A course in nuclear physics, hadron physics and particle physics. Emphasis is placed on topics

related to departmental research activities at Jefferson laboratory and elsewhere. Such topics include study of the structure and interactions of hadrons in terms of quarks and gluons. They also include low energy tests of Standard Model predictions. (PHY 630 may be repeated to a maximum of six hours when taken under different subtitles.) Prereq: PHY 629.

PHY 632 STATISTICAL MECHANICS. (3)
A lecture and problem course dealing with the thermal properties of matter from the standpoint of statistical mechanics. Topics include thermodynamic properties, perfect gases, and Fermi-Dirac statistics. Prereq: PHY 504, 520, 522.

PHY 639 PHYSICAL PROCESSES IN ASTROPHYSICS. (3)
A lecture and problem course covering the physical processes encountered in astrophysics. The topics covered will include micro-physical processes in stellar atmospheres and the interstellar medium, high-energy astrophysics, and basic hydrodynamics and shock waves. Prereq: PHY/AST 592 or consent of instructor. (Same as AST 639.)

PHY 716 QUANTUM FIELD THEORY II. (3)
A continuation of PHY 616. Topics include approximation methods in many body theory and applications to condensed matter and nuclear systems, quantum electrodynamics, radiative corrections, Higgs mechanism and applications to particle physics and superconductivity, introduction to non-Abelian gauge fields and the standard model. Prereq: PHY 616.

PHY 748 MASTER'S THESIS RESEARCH. (0)
Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

PHY 749 DISSERTATION RESEARCH. (0)
Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

PHY 767 DISSERTATION RESIDENCY CREDIT. (2)
Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

PHY 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)
May be repeated to a maximum of 12 hours.

PHY 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)
May be repeated indefinitely.

PHY 770 COLLOQUIUM. (1)
A weekly meeting of the staff and advanced students for the discussion of recent developments in physics and of work in progress in the department. Credit is given to those who satisfactorily present papers. May be repeated to a maximum of eight credits.

PHY 781 INDEPENDENT WORK IN PHYSICS. (1-9)
May be repeated to a maximum of 18 credits. Prereq: Graduate standing in Physics.

PHY 790 RESEARCH IN PHYSICS. (3)
May be repeated to a maximum of six credits.

PHY 791 RESEARCH IN PHYSICS. (5)
May be repeated to a maximum of 10 credits.

PLS Plant and Soil Science

PLS 100 AN INTRODUCTION TO HORTICULTURE PROFESSIONS. (1)
A survey of horticulture as a profession; to inform students of opportunities and to develop an appreciation of horticultural science as it relates to the human environment. Offered on a pass/fail basis only.

PLS 103 PLANTS, SOILS, AND PEOPLE: A GLOBAL PERSPECTIVE. (3)
Only a few things are essential to life, and food is one of them. What people eat is about what they need to be healthy, what they want to eat (personal preference and culture), and what they have available or can afford to eat. Agriculture plays a vital role in human food security. Many experts feel the world is facing a food supply crisis. Knowledge and application of the principles of plant and soil sciences will have a dramatic effect on human food security, now and into the future, both locally and globally. However, these issues will also be impacted by future human population growth, urbanization, consumer preferences, human decisions regarding civic duties, and climate change. Students successfully completing this course will leave with an understanding of the need to sustainably expand the world's food supply, the basic principles of plant and soil science and their application to this problem, and their own potential role in determining our ability to meet this challenge. Students may not receive credit for both this course and PLS 104.

PLS 104 PLANTS, SOILS, AND PEOPLE: A SCIENCE PERSPECTIVE. (3)
An introduction to the looming world food crisis and the scientific basis governing our ability to sustainably meet it. The course explores the biological and environmental constraints on food production, the ways that agricultural science has dealt with these in the past and possible ways

for the future, as well as societal and cultural issues, such as population growth, human health, education, and food definitions, that also impact food security. Intended for any student interested in these topics. Students may not receive credit for both this course and PLS 103.

PLS 210 THE LIFE PROCESSES OF PLANTS. (3)
This course is intended to provide a basic understanding of the natural products and processes that shape the nature of modern plants, and govern their interactions with the environment and characteristics unique to plants, and develop a basic understanding of how these plant attributes relate to organismic function. Emphasis will be placed on exploring the nature of the major plant biomes of the Earth, their community dynamics, and how member plants compete for space and other resources. Development of optimal plant strategies for reproductive success, plant interaction with other living systems as well as abiotic factors and their defense from predation and attack will also be considered.

PLS 220 INTRODUCTION TO PLANT IDENTIFICATION. (3)
An introduction to the techniques used for plant identification based on over one hundred plants encountered in everyday life. Lecture, one hour; laboratory, four hours per week.

PLS 240 INTRODUCTION TO FLORAL DESIGN. (3)
The students in this class will be introduced to design theory and basic techniques of floral design. The basic mechanics necessary to follow the principles of floral design will be stressed. Students will also be exposed to the business basics that are necessary to execute a floral design, as well as the global nature of the floral design industry.

PLS 320 WOODY HORTICULTURAL PLANTS. (4)
A detailed study of evergreen and deciduous trees, shrubs, vines, and ground covers occurring in the landscape; their systematic identification, hardiness, form, growth habit, size, culture, adaptation to environmental conditions, uses, and outstanding horticultural characteristics. Lecture, three hours; laboratory, three hours. Prereq: PLS 220.

PLS 330 HERBACEOUS HORTICULTURAL PLANTS I. (2)
The identification and cultural requirements of herbaceous plants. A designated number of annuals, perennials, commercial cut flowers, flowering pot plants, bulbs, and foliage plants readily available in the fall will be covered. Lecture, three hours; laboratory, two hours per week for one half semester. Prereq: PLS 220.

PLS 332 HERBACEOUS HORTICULTURAL PLANTS II. (2)
The identification and cultural requirements of herbaceous plants. A designated number of annuals, perennials, commercial cut flowers, flowering pot plants, bulbs, and foliage plants readily available in the spring will be covered. Lecture, three hours; laboratory, two hours per week for one half semester. Prereq: PLS 220.

PLS 335 DISTILLATION, WINE AND BREWING SCIENCE. (3)
Broad introduction into wine, brewing, and distillation science. Information includes viticulture (growing grapes for wine), wine making (production), wine flavor chemistry, commodities for fermentation, brewing science (beer making to distribution) and distilling. This class is not based on consumption, but rather the combination of science and management strategies needed to produce quality products. A structured vocabulary is associated with production, marketing and distribution of wine, brewing and distilled products. An overarching outcome of this course is that students can describe the chemistry, biology and technology involved in fermented beverages and apply these skills in a problem solving setting. The course will focus on introductory concepts, career paths available and problem solving skills required in each element of the production chain.

PLS 336 INTRODUCTION TO VITICULTURE – GRAPE PRODUCTION. (3)
This class is designed for students interested in pursuing a career in the commercial grape and wine industry. Topics to be discussed include: history of grape production in Kentucky, basic grapevine physiology and anatomy, vineyard design and establishment, important pathogens of grapevines, and economics of grape production. Lecture, three hours per week.

PLS 337 INTRODUCTION TO ENOLOGY: WINE PRODUCTION. (3)
This course is designed to provide students with an understanding of procedures used to produce commercial wines in Kentucky. Topics to be discussed include: the impact of vineyard management practices on wine quality, chemical constituents of wine grapes, production procedures specific to various wine styles using both small and large scale equipment, and economics of wine production. Lecture, three hours per week. Prereq: Must be 21 years of age prior to first day of class.

PLS 340 FLORAL DESIGN FOR LIFE'S EVENTS. (2)
Students will explore the use of flowers in life's events such as weddings, funerals, birthdays and various celebrations. Advanced floral techniques and styles will be taught and executed. The significance of flowers used in events of different cultures will be examined. Prereq: PLS 240 Introduction to Floral Design.

PLS 352 NURSERY PRODUCTION. (3)
An introduction to the production practice of container and field grown nursery stock as they relate to management and operation of a nursery business. A two to three-day field trip is required. Lecture, two hours; laboratory, three hours per week. Prereq or concur: HOR 327 and PLS 465 or consent of instructor.

PLS 366 FUNDAMENTALS OF SOIL SCIENCE. (4)
Study of the physical, chemical and biological properties of soils and how these properties relate to plant nutrient availability and plant growth, land-use planning and management issues,

Course Descriptions

and soil and water quality issues. Lecture, three hours; laboratory, three hours. Prereq: CHE 105.

PLS 386 PLANT PRODUCTION SYSTEMS. (4)

In-depth analysis of the underlying principles of plant production systems. Successful strategies, based on application of the principles developed by lecture and laboratory activities, will be discussed in either agronomic or horticultural contexts. Special attention will be given to minimizing the environmental impact of the plant production techniques employed. Prereq: PLS 210 and PLS 366 or concurrently or consent of instructor. (Same as SAG 386.)

PLS 389 WINE APPRECIATION. (3)

Wine has been produced and enjoyed for thousands of years. It can play an important role in culture, business and social events. While appreciation of wine can be as simple as whether you like a wine, knowledge of the history of wine, aspects of wine aromas and tastes, wine grapes, and winemaking processes opens up a world of deeper enjoyment for experiencing wine. This course will introduce students to these topics plus the major wine producing areas of the world and their wines. The overall goal of the course is to serve as a first step in a life-long journey of learning about and appreciating wines. Prereq: Students must be 21 years of age to enroll.

PLS 390 AGROECOLOGY. (3)

A general introduction to ecological principles and processes applied to agricultural ecosystems, including interactions between plants, soils, and animals on population, community and ecosystems scales. Course concepts will be applied to agricultural ecosystems that are of economic importance and ecological significance to the state of Kentucky. Emphasis will be placed on understanding how an ecological perspective can inform sustainable land management, the ecological basis for best management practices, and the interdisciplinary nature of agroecosystem management. (Same as SAG 390.)

PLS 395 SPECIAL PROBLEMS IN PLANT AND SOIL SCIENCE. (1-4)

May be repeated for a maximum of nine credits. Prereq: Consent of appropriate instructor before registration.

PLS 396 SOIL JUDGING. (1-2)

This course involves basic soil resource evaluation designed to provide the students with essential field training needed to pursue careers as soil scientists, conservationists, planners, agricultural chemical representatives and environmental assessors. It is also used to prepare the UK soil judging team for regional college competition. May be repeated to a maximum of five credit hours. Prereq: Consent of instructor.

PLS 399 EXPERIENTIAL LEARNING IN PLANT AND SOIL SCIENCE. (1-6)

A field-based learning experience in plant and soil science under the supervision of a faculty member. May be repeated for a maximum of six credits. Pass/fail only. Prereq: Complete learning contract before registration.

PLS 404 INTEGRATED WEED MANAGEMENT. (4)

A study of weed management concepts based on the integration of weed biology and ecology data with cultural, biological, and herbicidal control. Lecture, three hours; laboratory, two hours. Prereq: PLS 386.

PLS 406 ADVANCED SOIL JUDGING. (1)

A more advanced treatment of soil site evaluations under diverse climatic and physiographic environments. Students will obtain expertise in assessing properties of contrasting soil types and rating them for soil use and management suitability. The course is also used for preparing the UK soil judging team for national college competition. May be repeated to a maximum of four credit hours. Prereq: PLS 396 and qualifying for national competition.

PLS 408 TOBACCO. (3)

History, botany, pathology, entomology, breeding, and culture of tobacco with special emphasis on burley. Prereq: PLS 386 or consent of instructor.

PLS 440 PLANT PROPAGATION. (3)

A study of the principles and practices involved in producing plants by sexual and asexual methods and to provide the basic skills necessary for using these methods. The interrelationship of plant growth, structure and the environment as they affect the ability to propagate plants by a specific method. Lecture, two hours; laboratory, three hours per week. Prereq: PLS 210.

PLS 450G BIOGEOCHEMISTRY. (3)

A lecture and lab course emphasizing the role of microbial processes on elemental and pollutant cycling in terrestrial soils and aquatic sediments. Soils and sediments from different ecosystems are evaluated for microbial community composition and biogeochemical cycling of organic and inorganic nutrients and pollutants using advanced molecular and laboratory techniques. Several all day field trips and laboratory exercises required. Limited to eight students at the senior or higher level standing. Prereq: CHE 105, 107, 111, 113. (Same as NRE 450G.)

PLS 451 LANDSCAPE MANAGEMENT AND ARBORICULTURE. (3)

Discussion of the protection, pruning, repair, and culture of plant material in landscape plantings as well as the diagnosis of plant-related problems and the management principles of landscape maintenance. Lecture, two hours; laboratory, three hours per week. Prereq: PLS 210, PLS 386.

PLS 455G WETLAND DELINEATION. (3)

Basic concepts of natural wetland ecosystems, their importance, functions, and major features used for their identification and classification. Application of basic hydrology, hydrophytic vegetation and hydric soil indicators for identification of jurisdictional wetlands utilizing

documentation and analysis of field collected data. Three laboratory exercises and four short field trips required. Prereq: PLS 366 or consent of instructor. (Same as NRE 455G.)

PLS 465 GREENHOUSES AND CONTROLLED ENVIRONMENTS. (3)

A study of greenhouse structures, coverings, equipment, and the monitoring and regulation of the environment including temperature, light, carbon dioxide, and relative humidity as these factors relate to the commercial production of greenhouse crops. Other types of controlled environments are also included. Lecture, two hours; laboratory, two hours per week. Prereq: PLS 386.

PLS 468G SOIL USE AND MANAGEMENT. (3)

The application of principles related to soils and their management in planning the utilization of land and associated resources. Lecture and discussion. Prereq: PLS 366 or consent of instructor.

PLS 470G SOIL NUTRIENT MANAGEMENT. (3)

Soil reaction/cycling of elements essential for plant growth; rates, timing and placement of nutrient sources in modern crop/soil management systems; plant and soil sampling and analysis to diagnose plant nutrient stress. Prereq: CHE 105, PLS 366 and PLS 386 or consent of instructor. (Same as NRE 470G.)

PLS 490 TOPICS IN PLANT AND SOIL SCIENCE. (3)

A capstone course for majors in Plant and Soil Science to be taken near the conclusion of the student's academic career. The course provides the student the opportunity to integrate knowledge acquired in previous courses in the plant and soil science and support areas. Emphasis will be placed on problem solving, synthesizing and integrating information, critical thinking, group activities, and written and oral communication. Instructional methods may include formal lectures, laboratories or supervised individual research. The specific nature of the course depends upon the student's Area of Emphasis within the Plant and Soil Science major. All topics offered will be approved by the Undergraduate Education Committee in the Area of Emphasis. Prereq: Senior in Plant and Soil Science. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

PLS 502 ECOLOGY OF ECONOMIC PLANTS. (3)

Study of the physical environment (radiation, temperature, precipitation, and evapotranspiration) in which crops are grown and the effect of the environment on crop growth and yield. Both micro- and macro-climatic relationships are considered.

PLS 510 FORAGE MANAGEMENT AND UTILIZATION. (3)

Critical study of grassland plants and the biological and physical factors operative in utilization of natural and cultivated grasslands by domestic animals. Lecture, three hours. Prereq: PLS 386, or consent of instructor.

PLS 512 GRAINS AND OILSEEDS. (3)

Management and production of major grains and oilseeds in Kentucky. Prereq: PLS 366, PLS 386, or similar courses; senior or graduate student.

PLS 514 GRASS TAXONOMY AND IDENTIFICATION. (3)

Overview of the grass family, concentrating on taxonomic issues and identification skills for ~200 species (turf, forages, weeds, etc.). Lecture: two hours; laboratory: two hours per week. Prereq: PLS 220 or permission from instructor.

PLS 515 TURF MANAGEMENT. (3)

A study of the selection, culture, and management of certain turf species used for home lawns, golf courses, athletic fields, and highway slopes. Lecture, two hours; laboratory, two hours. Prereq: PLS 210 and PLS 366.

PLS 520 FRUIT AND VEGETABLE PRODUCTION. (4)

Commercial production practices for major fruits and vegetables. Prereq: PLS 386.

PLS 525 NURSERY AND FLORICULTURE CROP PRODUCTION. (4)

This course presents advanced methods and concepts for the commercial production of selected nursery and floriculture crops under field, greenhouse and controlled environments. Field trips for this course may end up to one hour later than the scheduled time due to distances traveled to commercial greenhouse and nursery firms. Prereq: PLS 386 and PLS 440.

PLS 531 FIELD SCHOOLS IN CROP PEST MANAGEMENT. (2)

A course for the Plant Pest Management option in Plant and Soil science to reinforce the concepts of pest management learned in previous courses. Emphasis will be placed on integrating information to develop pest management strategies. Instructional methods will include formal lectures and laboratories in the field. Prereq: ENT 300 or ENT 310 or ENT 320; PLS 404 and PPA 400G; or consent of instructor.

PLS 556 SEED PRODUCTION AND TECHNOLOGY. (3)

A study of seeds of improved cultivars as a delivery system for plant genetics. Principles of seed production, harvesting and conditioning for agronomic and horticultural crops within and outside of the region of adaptation. Seed multiplication systems, seed testing and the laws and regulations related to marketing high quality seed. Lecture, two hours; laboratory, four hours for 12 weeks. Prereq: PLS 386 or consent of instructor.

PLS 557 SEED VIGOR. (2)

Study of the concept of seed vigor, methods for seed vigor testing, and the relationship of seed vigor to seedling emergence and crop performance. Prereq: An introductory crop production or basic botany course.

***PLS 560 ECOTOXICOLOGY. (4)**

Emphasis will be placed on the physiological and toxicological effects of chemicals on natural biota, including considerations at cellular, organismal, population, and community levels. This will include assimilation and metabolism of pollutants by animal species, with emphasis upon biochemical and physiological mechanisms involved in stress-induced responses and stress reduction. Additional areas of concern will include the transport, fate, and effects of chemical stressors on structure and function of biotic communities and will include introductions to ecotoxicology and environmental regulatory strategies. Prereq: CHE 105, CHE 107, BIO 150, BIO 153 and BIO 315 or BIO 350 or PGY 502 or equivalents or consent of instructor. (Same as TOX 560.)

PLS 566 SOIL MICROBIOLOGY. (3)

The nature and biochemical activities of soil microflora; their significance in soil genesis and structure and their role in soil fertility. Prereq: PLS 366 or an introductory microbiology course or consent of instructor.

PLS 567 METHODS IN SOIL MICROBIOLOGY. (1)

Methods in Soil Microbiology will be a laboratory course dedicated to introducing upper division students to the methods and techniques used by microbiologists and other soil scientists to examine organisms, interactions, and processes in soil systems. Laboratory, three hours per week. Prereq: PLS 366 or introductory microbiology course.

PLS 573 SOIL MORPHOLOGY AND CLASSIFICATION. (3)

Study of concepts of soil horizons, soil profiles and soilscapes; morphological, physical, chemical and mineralogical parameters useful in their characterization. Soil forming factors and processes. Basic principles of soil classification. Characterization of selected Kentucky soils and their placement in the modern system; practical field problems in soil identification, characterization and classification. Lecture, two hours; laboratory, three hours per week. Prereq: PLS 366 and PLS 367 or consent of instructor.

PLS 575 SOIL PHYSICS. (3)

This course deals with the state and movement of matter, and with the fluxes and transformations of energy, in soil systems. Its objectives are to develop a basic theoretical understanding of soil physical properties and processes (with emphasis on the statics and dynamics of soil water), and to demonstrate how this understanding can be applied under field conditions to make sound management decisions concerning both agricultural and non-agricultural uses of soils. Prereq: MA 113 or MA 123, PHY 201 or PHY 211, PLS 366 or consent of instructor.

PLS 576 LABORATORY IN SOIL PHYSICS. (1)

This course consists of laboratory and field exercises designed to increase understanding of important soil physical properties and processes. Its objectives are to develop familiarity with standard methods of measuring soil physical parameters, and to instill scientific methods of data collection, analysis and interpretation. Prereq: PLS 367, concurrent enrollment in PLS 575, or consent of instructor.

PLS 597 SPECIAL TOPICS IN PLANT AND SOIL SCIENCE (Subtitle required). (1-3)

Special topical or experimental courses in crop science, soil science or related areas of horticulture, or plant physiology for graduate and advanced undergraduate students. Special subtitle required and must be approved by the chair of Agronomy or Horticulture. A particular subtitle may be offered twice under PLS 597. Students may not repeat under the same subtitle. Prereq: Permission of instructor.

PLS 599 SPECIAL PROBLEMS IN PLANT AND SOIL SCIENCE. (1-4)

May be repeated for a maximum of nine credits. Prereq: Consent of instructor.

PLS 601 SPECIAL TOPICS IN MOLECULAR AND CELLULAR GENETICS. (1)

Each semester five distinguished scientists visit the UK campus to deliver a series of three formal lectures each and participate in numerous informal contacts with graduate students. The emphasis is on the presentation of the most current advances (often unpublished) in selected topics in molecular and cellular genetics. May be repeated to a maximum of six credits. (Same as BCH/BIO/MI/PPA 601.)

PLS 602 PRINCIPLES OF YIELD PHYSIOLOGY. (3)

Critical study of the physiological factors and processes involved in determining economic yield in grain crops. The focus will be on factors operating at the whole plant and plant community level as opposed to physiological processes at the cellular or subcellular level. A logical, analytical description of the process of economic yield production by grain crops will be developed and related to historical changes in crop yields and the potential for increasing yields in the future. Prereq: PLS 386 and BIO 430G or consent of instructor.

PLS 609 PLANT BIOCHEMISTRY. (3)

The course will consider the chemical constituents of plants (with emphasis on biologically or nutritionally significant compounds unique to plants), their biosynthesis, contribution to key metabolic and defense processes and the regulation of their synthesis. Included will be discussions of photosynthesis, carbohydrates, lipids, isoprenoids and phenylpropanoids, nitrogen fixation, nitrogen and sulfur reduction and assimilation, alkaloids and additional secondary compounds, frontiers in plant biochemistry. Prereq: BCH 607 or equivalent or consent of instructor. (Same as BCH/PPA 609.)

PLS 615 ADVANCED PLANT GENETICS AND GENOMICS. (3)

Genomics is reshaping the life sciences, providing high-throughput tools to decipher function of individual genes and to characterize their regulation and interactions. This course will introduce graduate students to most recent advances in the area of plant genetics and genomics.

The topics will include structural and functional analysis of plant genomes, genome evolution, application of genomics tools to crop improvement, and basic concepts of bioinformatics. Prereq: Introductory courses in genetics and biochemistry.

PLS 620 PLANT MOLECULAR BIOLOGY. (3)

This course is intended to be a treatment of current concepts of plant molecular biology. It will be a literature-based course, supplemented by handouts and reading lists. The course will deal as much as is possible with topics that are unique to plants. Current aspects of molecular biology that are relevant to the course content will be covered in the first part of the course; however, these lectures will not be a review of topics that should have been retained from introductory genetics and biochemistry courses. Also, they will not be a substitute for a molecular biology course. Prereq: One semester of undergraduate genetics and biochemistry or consent of instructor. (Same as BIO 620.)

PLS 622 PHYSIOLOGY OF PLANTS I. (3)

A physiological/biochemical treatment of central topics in modern plant physiology. Topics will include: plant-cell biology, ion transport, water and translocation, respiration and photosynthesis. Prereq: BIO 430G or equivalent or consent of coordinator. Prereq or concur: BCH 607. (Same as BIO/FOR 622.)

PLS 623 PHYSIOLOGY OF PLANTS II. (3)

A physiological/biochemical treatment of central topics in modern plant physiology. Topics will include: plant hormones, an introduction to plant biotechnology, senescence and abscission, stress physiology, phytochrome-photomorphogenesis-phototropism nitrogen and sulfur metabolism. Prereq: BIO 430G or equivalent or consent of coordinator. Prereq or concur: BCH 607. (Same as BIO/FOR 623.)

PLS 640 IDENTIFICATION OF PLANT DISEASES. (3)

Recognition and identification of plant diseases and their causes and development. The course is designed to give students practical experience in dealing with a wide array of plant diseases, symptom expressions, causal agents and interactions with environmental factors encountered in the difficult task of identifying plant diseases. May be repeated to a maximum of nine credits. Lecture, one hour; laboratory, six hours. Prereq: PPA 400G or equivalent or consent of instructor. (Same as PPA 640.)

PLS 642 BIOSYNTHESIS OF NATURAL PRODUCTS. (3)

An overview of the biochemical pathways leading to compounds called natural products/secondary metabolites. Prereq: Two semesters of organic chemistry. (Same as BCH/PHR 620.)

PLS 650 SOIL-PLANT RELATIONSHIPS. (3)

An advanced course on the relationships between media and the root systems of plants growing therein. Prereq: PLS 366, BIO 430G (or equivalent), or consent of instructor.

PLS 655 SPATIAL AND TEMPORAL STATISTICS. (3)

Opportunities for spatial and temporal monitoring strategies, the diagnosis and analysis of spatial and temporal agricultural and ecosystem processes are taught. Methodology is based on Statistical Time Series Analysis and Geostatistics. Prereq: STA 570 or other prerequisite in agreement with the instructor.

PLS 657 SEED BIOLOGY. (3)

Structure, development and function during plant reproductive development and seed ontogeny, including fertilization, embryogeny and endosperm development, seed formation, maturation, germination, dormancy and deterioration. Prereq: ABT 360, BIO 430G or consent of instructor.

PLS 660 ADVANCED SOIL BIOLOGY. (2)

A critical evaluation of the current research status in selected aspects of soil biology. Prereq: PLS 566 or consent of instructor.

PLS 664 PLANT BREEDING I. (3)

The application of advanced genetic principles to plant improvement. An in-depth study of existing plant breeding procedures and their applications and consideration of new techniques that can be applied to plant breeding and crop improvement. Prereq: STA 570 or consent of instructor.

PLS 671 SOIL CHEMISTRY. (4)

A study of the chemical characteristics of the soil and of the more important chemical processes in the soil. Lecture and discussion, three hours; laboratory, two hours. Prereq: PLS 470G, 581; CHE 442G, or consent of instructor.

PLS 676 QUANTITATIVE INHERITANCE IN PLANT POPULATIONS. (3)

After a brief review of population genetics theory, the course is divided into two sections which cover methods of estimating genetic variances and selection methods in population improvement. The course will focus on handling and interpretation of actual data sets through data analysis and discussion of current literature. Prereq: STA 570, STA 671, and STA 672. (Same as STA 676.)

PLS 697 SPECIAL TOPICS IN PLANT AND SOIL SCIENCE (Subtitle required). (1-3)

Special topic or experimental course in cross science, horticulture, plant physiology or soil science for advanced graduate students. Special title required and must be approved by the chairpersons of the Departments of Agronomy and Horticulture. A particular title may be offered twice, at most, under PLS 697. Students may not repeat under the same title. May be repeated to a maximum of six hours. Prereq: Consent of appropriate instructor before registering.

Course Descriptions

PLS 712 ADVANCED SOIL FERTILITY. (4)

An integration of the effects of soil, climate, species and management on the nutrition and dry matter accumulation of plants. Lecture, three hours; laboratory, two hours per week. Prereq: PLS 470G or PLS 650 or consent of instructor.

PLS 741 ENVIRONMENTAL CLAY MINERALOGY. (3)

A comprehensive study of the crystal structures of clay minerals commonly found in soils and sediments. Lecture and discussion, two hours; laboratory, three hours. Prereq: GLY 360 or consent of instructor. (Same as EES 741.)

PLS 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

PLS 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of qualifying exams.

PLS 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

PLS 768 RESIDENCE CREDIT FOR MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

PLS 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

PLS 772 SEMINAR IN PLANT AND SOIL SCIENCE (Subtitle required). (1)

Reports and discussion of problems and research in crops, soils, horticultural science and plant physiology. May be repeated three times for a maximum of four credits.

PLS 799 RESEARCH IN PLANT AND SOIL SCIENCE. (1-4)

May be repeated for a maximum of 12 credits. Prereq: Consent of instructor.

PM Preventive Medicine and Environmental Health

PM 602 OCCUPATIONAL AND ENVIRONMENTAL HEALTH. (4)

A continuation of topics in PM 601. Lecture, three hours; laboratory, two hours per week. Prereq: PM 601 or consent of instructor.

PM 661 INDUSTRIAL HYGIENE SAMPLING. (3)

This course, using lectures and laboratory exercises, will cover sampling and analysis techniques for industrial hygiene assessment and monitoring. The laboratory experiments are intended to simulate typical industrial hygiene measurement situations and to provide a basis for selection of sampling techniques and critical evaluation of laboratory results. Lecture, two hours; laboratory, two hours per week. Prereq: Consent of the instructor.

PM 770 SEMINAR IN PREVENTIVE MEDICINE AND PUBLIC HEALTH. (1-3)

A special seminar focusing each semester on an important topic, such as health problems of special working groups, cancer control, and health policy issues. May be repeated to a maximum of six credits. Prereq: Consent of instructor.

PM 780 SPECIAL PROBLEMS IN PREVENTIVE MEDICINE AND PUBLIC HEALTH. (1-3)

Organized study or tutorial focused on special problems or issues. May be repeated to a maximum of six credits. Prereq: Consent of instructor.

PM 815 FIRST-YEAR ELECTIVE, PREVENTIVE MEDICINE AND ENVIRONMENTAL HEALTH. (1-3)

With the advice and approval of his or her faculty adviser, the first-year student may choose approved electives offered by the Department of Preventive Medicine and Environmental Health. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the first-year curriculum. Pass-fail only. Prereq: Admission to first year, College of Medicine.

PM 825 SECOND-YEAR ELECTIVE, PREVENTIVE MEDICINE AND ENVIRONMENTAL HEALTH. (1-4)

With the advice and approval of his or her faculty adviser, the second-year student may choose approved electives offered by the Department of Preventive Medicine and Environmental Health. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the second-year curriculum. Pass-fail only. Prereq: Admission to second-year medical curriculum and approval of adviser.

PM 841 PREVENTIVE MEDICINE CLERKSHIP SELECTIVE. (1-6)

The medical student working singly or in small groups will, with Preventive Medicine faculty assistance, identify a question in the broadest sense in "medicine" which can best be answered

by a population-based study. This could include comparison of therapeutic techniques, status of knowledge by health provider or consumer about certain conditions or costs of care, problems of organizing health services, ethical problems, or any other population-based question amenable to study. Building on the second year experience, the project will involve identification of a question, design and conduct of the study, appropriate analysis of data, and a written and oral presentation. Prereq: Admission to College of Medicine.

PM 850-899 FOURTH-YEAR ELECTIVE FOR MEDICAL STUDENTS. (1-6)

With the advice and approval of the faculty adviser and the Student Progress and Promotions Committee, the fourth-year student may choose approved electives offered by the various departments in the College of Medicine. The intent is to provide the student an opportunity to develop his fund of knowledge and clinical competence. Prereq: Admission to the fourth year, College of Medicine and/or permission of the Student Progress and Promotions Committee.

Approved electives:

PM 850 PREVENTIVE MEDICINE OFF-SITE ELECTIVE

PM 852 RESEARCH IN PREVENTIVE MEDICINE AND ENVIRONMENTAL HEALTH

PPA Plant Pathology

PPA 395 INDEPENDENT STUDY IN PLANT PATHOLOGY. (1-4)

Independent study in Plant Pathology under the supervision of a faculty member. Prereq: Consent of appropriate instructor.

PPA 400G PRINCIPLES OF PLANT PATHOLOGY. (3)

To present students with the principles of plant pathology. The causes, effects, control and nature of plant diseases will be studied; the laboratory will expose students to common diseases and pathogens discussed in lecture. Emphasis will be given to diseases important in Kentucky. Lecture, two hours; laboratory, two hours. Prereq: BIO 148 and BIO 152, or BIO 210/PLS 210, or consent of instructor.

PPA 500 PHYSIOLOGY OF PLANT HEALTH AND DISEASE. (3)

First-semester graduate students and upper class undergraduates will gain a basic understanding of physiology, structure and development of plants and their associated fungi, viruses, bacteria and nematodes, and to appreciate how interactions with symbionts and pathogens influence plant health and disease. Prereq: PPA 400G (can be concurrent).

PPA 600 CRITICAL METHODS IN PLANT-MICROBE INTERACTIONS. (2)

The course will provide instruction on experimental methods commonly used in Plant-Microbe Interaction and will train students in critical thinking, grant writing, scientific ethics and seminar presentation. Prereq: PPA 500.

PPA 601 SPECIAL TOPICS IN MOLECULAR AND CELLULAR GENETICS. (1)

Each semester five distinguished scientists visit the UK campus to deliver a series of three formal lectures each and participate in numerous informal contacts with graduate students. The emphasis is on the presentation of the most current advances (often unpublished) in selected topics in molecular and cellular genetics. May be repeated to a maximum of six credits. (Same as BIO/BCH/MI/PLS 601.)

PPA 609 PLANT BIOCHEMISTRY. (3)

The course will consider the chemical constituents of plants (with emphasis on biologically or nutritionally significant compounds unique to plants), their biosynthesis, contribution to key metabolic and defense processes and the regulation of their synthesis. Included will be discussions of photosynthesis, carbohydrates, lipids, isoprenoids and phenylpropanoids, nitrogen fixation, nitrogen and sulfur reduction and assimilation, alkaloids and additional secondary compounds, frontiers in plant biochemistry. Prereq: BCH 607 or equivalent or consent of instructor. (Same as BCH/PLS 609.)

PPA 620 FUNGICIDES, ADVANCED CONCEPTS. (3)

An in-depth exploration of diverse factors that affect field performance of fungicides, as well as environmental and toxicological dimensions of these disease-control chemicals. Prereq: Principles of Plant Pathology (PPA 400G) or the equivalent, or permission of the instructor.

PPA 630 INTRODUCTION TO GENETICALLY ENGINEERED CROPS, RISKS AND BENEFITS I. (1)

This is Part I of a two-part series of one-credit, graduate-level courses exploring GMO (genetically engineered) crops. In Part I (PPA 630), students will be introduced to what they are; and how GMO crops are similar to, and different from, other crops. In Part II (PPA 631), students will explore perceived risks and benefits to the use of these technologies. Prereq: A Bachelor's degree in any subject; a college-level course in biology or permission of the instructor.

PPA 631 INTRODUCTION TO GENETICALLY ENGINEERED CROPS, RISKS AND BENEFITS II. (1)

This is Part II of a two-part series of one-credit, graduate-level courses exploring GMO (genetically engineered) crops. In Part I (PPA 630), students will be introduced to what they are; and how GMO crops are similar to, and different from, other crops. In Part II (PPA 631), students will explore perceived risks and benefits to the use of these technologies. Prereq: A Bachelor's degree in any subject; a college-level course in biology or permission of the instructor.

PPA 640 IDENTIFICATION OF PLANT DISEASES. (3)
Recognition and identification of plant diseases and their causes and development. The course is designed to give students practical experience in dealing with a wide array of plant diseases, symptom expressions, causal agents and interactions with environmental factors encountered in the difficult task of identifying plant diseases. May be repeated to a maximum of nine credits. Lecture, one hour; laboratory, six hours. Prereq: PPA 400G or equivalent or consent of instructor. (Same as PLS 640.)

PPA 641 PLANT DISEASE, POPULATION BIOLOGY, AND BIOTECHNOLOGY. (1)
To understand implications of deployment of biotechnology and other disease management practices at the level of host and pathogen populations. Prereq: PPA 400G.

PPA 650 FUNGAL BIOLOGY. (3)
The Fungal Biology course introduces basic mycological concepts, including systematics, anatomy, cell biology, metabolism, developmental biology, ecology, population genetics, and reproduction. There is a focus on modern molecular approaches to these concepts. Students will also learn about the use of fungi in research and biotechnology. Prereq: Undergraduate courses in biology, genetics, and chemistry.

PPA 670 PLANT BACTERIOLOGY. (1)
Bacterial mechanisms underlying pathogenesis and virulence in interactions causing plant disease, and symbiotic compatibility in mutualisms. Prereq: PPA 400G, PPA 500, PPA 600, PPA 640 can be concurrent.

PPA 671 ADVANCED PLANT VIROLOGY. (2)
Molecular basis of plant virus infection of plants. Virus replication and spread. Virus control strategies. Prereq: PPA 400G, PPA 500, PPA 600.

PPA 673 ADVANCED PLANT DISEASE RESISTANCE. (1)
Bacterial mechanisms underlying pathogenesis and virulence in interactions causing plant disease, and symbiotic compatibility in mutualisms. Prereq: PPA 400G, PPA 500, PPA 600.

PPA 700 PLANT PATHOLOGY LABORATORY VISITS. (1-3)
Semester-long rotations in Plant Pathology laboratories other than the students' "home lab". An opportunity will be provided to apply new approaches that are utilized in those labs to the students' research problems. May be repeated to a maximum of six credit hours.

PPA 748 MASTER'S THESIS RESEARCH. (0)
Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

PPA 749 DISSERTATION RESEARCH. (0)
Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

PPA 767 DISSERTATION RESIDENCY CREDIT. (2)
Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

PPA 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)
May be repeated to a maximum of 12 hours.

PPA 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)
May be repeated indefinitely.

PPA 770 PLANT PATHOLOGY SEMINAR. (1)
Reports and discussion of problems and investigations of problems in plant pathology. May be repeated to a maximum of four credits.

PPA 784 SPECIAL PROBLEMS IN PLANT PATHOLOGY. (1-3)
May be repeated to a maximum of nine credits. Prereq: PPA 400G or equivalent or consent of instructor.

PPA 794 RESEARCH IN PLANT PATHOLOGY. (1-9)
May be repeated to a maximum of 30 credits. Prereq: PPA 400G or equivalent or consent of instructor.

PPA 799 TEACHING IN PLANT PATHOLOGY. (1-2)
Discussion of, and experience with, various instructional techniques in plant pathology; effective preparation, presentation and evaluation of lectures and laboratories focusing on plant diseases; practical experience in lectures, teaching laboratories and/or mentoring undergraduate research projects. May be repeated to a maximum of four credits. Prereq: PPA 400G or equivalent.

PPH Population Health

PPH 355 SOCIOLOGY OF HEALTH AND ILLNESS. (3)
Who defines health and illness? Why is disease and premature death unequally distributed in society? What social forces cause individuals to get sick or stay healthy? How have changes in the medical profession, the health care system, and health policy affected treatment outcomes and illness experiences? This course addresses these questions through a presentation of

important concepts and substantive issues the sociology of health and illness (or medical sociology), and an introduction to major classic and contemporary research in this area. We will compare and contrast sociological perspectives on health with the perspectives offered by biomedicine, psychiatry and allied disciplines. The course has two major sections: The first covers the social origins of illness—the social construction of illness and biomedical knowledge, social epidemiology, and social influences on personal experiences of illness. The second section covers social and institutional responses to illness and the impact of these on physician-patient interactions, health outcomes, and the distribution of disease. In this section we will examine the medical profession, the health care system, health policy, and the changing nature of these. Class sessions will emphasize group discussions and exercises based on original scholarly writings. Discussions and exercises are designed to encourage the development of analytic skills, recognition of the benefits of collaborative approaches to complex problems, and independent exploration of course material. (Same as SOC 355.)

PPH 499 POPULATION HEALTH CAPSTONE (Subtitle required). (3)

This course provides an integrative experience for Population Health majors in their junior or senior year. The seminar format fosters integration of the program's interdisciplinary coursework, while providing the opportunity to focus on a particular area of interest within the topical theme of the seminar. Students will engage in a variety of activities designed to increase their understanding of the theoretical and methodological approaches that characterize the Population Health perspective. They will then use this perspective to develop, or to critically analyze, a project that addresses health change. The course will consist of seminar sessions, smaller peer group meetings, and individualized tutorial sessions. Students will learn to critically and respectfully engage with the work of their peers and effectively communicate the results of their projects. Prereq: Junior or Senior standing in Population Health; or consent of instructor.

PPS Pharmacy Practice and Science

PPS 101 PILLS, POTIONS AND POISONS: WHAT YOU NEED TO KNOW ABOUT MEDICATIONS. (3)

Students will learn basic principles of drug action, characteristics of drug dosage forms, important features of a variety of common drug classes, legal requirements of drugs, and contemporary issues with the use of prescription and over-the-counter drugs. These concepts will be discussed with an emphasis on applying this information in common, everyday life situations. Prereq: BIO 152 or equivalent CHE 105 or equivalent CHE 107 or equivalent.

PPS 102 COMPLEMENTARY AND ALTERNATIVE MEDICINE: WHAT YOU NEED TO KNOW ABOUT DIETARY SUPPLEMENTS. (3)

Students will learn basic principles of herbs and dietary supplements used for common conditions, how they are regulated by the federal government, marketing of these products, and contemporary issues that have occurred with use of dietary supplements. These concepts will be discussed with an emphasis on applying this information in common, everyday life situations. Prereq: BIO 152, BIO 142 or equivalent; CHE 105 or equivalent; CHE 107 or equivalent.

#PPS 103 DRUG USE, MISUSE AND ABUSE: A STUDY OF THE MOST COMMONLY MISUSED DRUGS. (3)

Students will learn about the most commonly misused drugs, the economic, societal and health consequences of drug misuse, signs and symptoms of drug use disorders and overdose, and select treatment modalities utilized to combat drug use disorders. These concepts will be discussed with an emphasis on applying this information in common, everyday life situations. This course will help students become more aware of the dangers and controversies surrounding certain drugs and become agents of change through educating those around them about drug misuse. Prereq: BIO 152 or equivalent; CHE 105 or equivalent; CHE 107 or equivalent.

PPS 564 INTRODUCTION TO FDA AND THE DRUG DEVELOPMENT PROCESS. (2)

A broad overview of the regulatory and scientific principles employed in pharmaceutical development including the regulatory framework and pre-clinical experimentation necessary to initiate a first time in human (Phase 1) trial through the objectives, principles, study designs, methods and reporting to evaluate a new pharmaceutical in a human. Students will develop an understanding of how certain forms of translational, or "bench to bedside" research must be organized and executed. Prereq: Enrollment in the Colleges of Pharmacy, Dentistry, Law, Medicine or Public Health, the NIH K-30 program, a junior or senior undergraduate, or consent of instructor.

PPS 605 PHARMACOECONOMICS AND DECISION ANALYSIS. (2)

Pharmacoeconomics and Decision Analysis is designed to equip students with a basic working knowledge and understanding of the application of pharmacoeconomic analysis and the results can be applied to clinical practice. Prereq: ECO 201, PPS 940 and/or permission of instructor.

#PPS 620 SUBSTANCE USE DISORDERS: HEALTH IMPLICATIONS, POLICIES AND PREVENTION STRATEGIES. (3)

This course provides an overview of the impact of alcohol, tobacco, and other drug use disorders on individuals and populations from the local, state, national and international perspectives. Topics include methods for measuring the impact of substance use disorders, risk and protective factors, prevention strategies and policies, "harm reduction", and the relationship between substance use disorders and crime. Prereq: Graduate student status.

PPS 665 ETHICAL ISSUES IN CLINICAL RESEARCH. (3)

Based on NIH guidelines for Responsible Conduct of Research, this course will present ethical and regulatory guidelines for conducting clinical research. Prereq: Participation in curriculum leading to Graduate Certificate in Clinical Research Skills, or permission of instructor. (Same as CPH 665.)

PPS 700 INTRODUCTION TO PHARMACEUTICAL OUTCOMES AND POLICY. (2-3)

This course provides an overview of approaches to the study of pharmaceutical outcomes and public policy. The course is designed to give students an introduction to the field, provide an opportunity to conduct introductory research in one of the various approaches, and experience the research environment through three half day research rotations in selected areas. Prereq: Graduate standing and permission of instructor.

PPS 701 PHARMACOEPIDEMIOLOGY. (3)

This course will provide an overview of the field of pharmacoepidemiology and its relationship to health care research. Various topics including methodology and analytical issues relevant to the conduct of pharmacoepidemiologic research will be covered. Time will also be spent reviewing existing papers in the field of pharmacoepidemiology. Prereq: CPH 605 and STA 580 or equivalent; may be concurrent. (Same as CPH 713.)

PPS 702 PHARMACEUTICAL HEALTH POLICY. (2-3)

The purpose of this course is to enable students to think systematically about the pharmaceutical health policy problems and the various strategies for their solution. This course will cover a range of theoretical and empirical literature on health care and public policy. Topics covered will include a basic understanding of the policy process and policy analysis, and a historical development of the health care system with special focus on quality, access, and cost. In addition, the course covers a range of reform initiatives focused on pharmaceutical policy and regulation. Prereq: Graduate standing and permission of instructor.

PPS 704 PHARMACY INFORMATICS. (2-3)

This course explores the theory and methods of measuring the performance and quality of pharmaceutical health outcomes emphasizing evidence-based practice and quality improvement approaches. Particularly, the course focuses on the use of data and information systems to measure quality, performance, and outcomes. Topics covered include designing and testing outcome based measures, measuring and evaluating satisfaction, measuring and evaluating treatment, risk adjustment, survey methods, patient records, encounter data, administrative data, claims data, and an assessment of the current outcome based standard National Committee on Quality Assurance, HEDIS 2009. Prereq: Graduate standing and permission of instructor.

PPS 706 INTERMEDIATE PHARMACOECONOMICS AND DECISION ANALYSIS. (3)

This course is designed to equip students with a working knowledge and understanding of the application of pharmacoeconomic analysis with an emphasis on critical review of the literature. Prereq: Graduate standing and permission of instructor.

PPS 710 TECHNIQUES IN SECONDARY DATA RESEARCH. (3)

A successful pharmaceutical outcomes and policy researcher must have the ability to independently assess the literature in order to identify a clinically relevant research question, design a study that will address the question and analyze and present the results appropriately to the scientific community. This course will provide an introduction to the conduct of pharmaceutical outcomes and policy research through in-depth didactic and practical instruction on the development, design, and presentation of relevant research study.

The course will have two components. Approximately half of the course will involve didactic instruction on specific topics related to the conduct and execution of pharmaceutical outcomes and policy research and half will be a hands-on experience in which the learner develops their own research question and hypothesis, designs a study and begins to analyze an existing healthcare dataset in order to answer a relevant pharmaceutical outcomes and policy question and present the results. Prereq: BST 580 or equivalent.

PPS 750 PHARMACEUTICAL OUTCOMES AND POLICY JOURNAL CLUB. (1)

Pharmaceutical Outcomes and Policy journal club is a weekly meeting scheduled for scholarly discussion and presentation of journal articles and relevant topics (new methodologies, current pharmaceutical policy drugs issues, etc.) pertaining to the fields of pharmaceutical policy and pharmaceutical outcomes.

PPS 760 SPECIAL TOPICS IN PHARMACY PRACTICE AND SCIENCE. (1-4)

This course deals with emerging concepts in Pharmacy Practice and Science which are not covered in other courses. May be repeated under a different subtitle to a maximum of twelve credits. Prereq: Graduate standing and permission of instructor.

PPS 764 DRUG DEVELOPMENT REGULATION AND CLINICAL RESEARCH. (3)

A study of the pharmaceutical development process and its regulation, including a detailed examination of clinical research methodologies. Students will demonstrate their competence by developing a clinical trial protocol. Prereq: Enrollment in the Pharmaceutical Sciences graduate program or consent of instructor.

PPS 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two

semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

PPS 778 SEMINARS IN PHARMACY PRACTICE AND SCIENCE. (1)

Reports and discussion of pertinent research and literature in pharmaceutical outcomes and policy. Required of all graduate students. Prereq: Graduate standing and permission of instructor.

PPS 790 RESEARCH IN PHARMACY PRACTICE AND SCIENCE – PREQUAL. (1-12)

Research work to be conducted in selected areas of pharmacy practice and science. Prereq: Graduate standing and permission of instructor.

PPS 811 COMPUTER APPLICATIONS IN PHARMACY. (2)

A guide to the selection and use of computers in pharmaceutical practice. Descriptions of functions, cost-benefit considerations, hardware and software, capabilities of various systems, language, applications to patient profiles, inventory control and accounts are considered.

PPS 813 GERIATRIC PHARMACY. (3)

A course designed to educate students in the basic knowledge of attitudes and skills required to meet the pharmaceutical needs of the elderly. Topics include discussions of the aging process, physiological and psychological changes in the elderly, how these changes influence patient compliance and the responses to drug and nondrug treatments, monitoring drug use in long-term care facilities, and special community services available to the elderly. Prereq: PHR 849, 852, 853, 854 and 856 or permission of instructor. (Same as GRN 513.)

PPS 832 ADVANCED COMMUNITY PRACTICE MANAGEMENT. (2)

A study of the principles and methods unique to the management of a community pharmacy, building on previous foundations and focusing on the entrepreneurial aspects of management. Prereq: PHR 831 and consent of instructor.

PPS 833 ADVANCED INSTITUTIONAL PRACTICE MANAGEMENT. (2)

Application of management principles to institutional and group practices. Emphasis is on the acquisition, distribution and control of drugs by pharmacists in the institutional practice settings and the justification, establishment and evaluation of clinical pharmacy services. Prereq: PHR 831, PPS 848.

PPS 848 INSTITUTIONAL PRACTICE AND STERILE PRODUCTS. (4)

An introduction to the practice of pharmacy in institutional settings and clinics. Emphasis is placed on principles of parental drug preparation, home health care and the delivery of pharmaceutical services in group practices. Lecture with some laboratory experiences and demonstrations. Prereq: PHR 805; coreq: PHR 849.

PPS 895 INDEPENDENT PROBLEMS IN CLINICAL PHARMACY. (1-3)

Selected problems in patient care, drug information, pharmacy administration, and pharmaceutical technology as related to pharmaceutical services. May be repeated to a maximum of six credits. Prereq: Consent of instructor.

PPS 896 INDEPENDENT PROBLEMS IN PHARMACY. (1-3)

Selected problems pertaining to the various aspects of pharmacy which may include such problems as pharmaceutical procedures, pharmaceutical formulations, pharmaceutical history, and pharmaceutical economics. May be repeated to a maximum of six credits. Prereq: Consent of instructor.

PPS 910 INTRODUCTION TO PHARMACY PRACTICE. (3)

An introduction to the practice of pharmacy within the major practice settings. Includes an introduction to the profession and discussions of the pharmacist within the health care system, professional pharmacy organizations, models and sites of practice, postgraduate educational and career opportunities, an introduction to product compounding and administration, professionalism, and required community service experiences. Prereq: Admission to first year, College of Pharmacy.

PPS 913 PHARMACOLOGICAL BASIS OF THERAPEUTICS: ANTIBIOTICS. (3)

A study of the pathophysiology and microbiology of infectious diseases concentrating on the pharmacology of the therapeutic agents (antibiotics) used to treat those diseases, including discussions of their rational use. Variable mixture of lectures, discussions and independent study. Prereq: Admission to the first year, College of Pharmacy.

PPS 916 NONPRESCRIPTION PHARMACEUTICALS AND SUPPLIES I. (2)

A study of various nonprescription pharmaceuticals, medical and surgical supplies and appliances commonly found in ambulatory pharmacy practice sites, their rational use and therapeutic efficacy. Decision making skills for ambulatory patient triage are emphasized. The use of home remedies and their limitations in the treatment of minor ailments is considered. Variable mixture of lecture, discussions and independent study. Prereq: Admission to the first year, College of Pharmacy.

PPS 919 PATIENT CARE LABORATORY I. (1)

An integration and application of the skills needed to fill the professional responsibilities of pharmacy practice as they relate to patient centered care and the patient care process, utilizing principles taught in the corequisite courses to provide the contextual framework for the skills considered. Prereq: Admission to the first year College of Pharmacy. Coreq: All concurrent PHR 91X series courses.

**PPS 920 COMMUNICATION AND BEHAVIOR
IN PHARMACY PRACTICE.**

(3)

An introduction to the social and behavioral issues that impact health including their influence on the pharmacist-patient relationship and the ability of the pharmacist to provide patient care. Includes discussions of stress and stress coping, communication with patients and other health care professionals, cultural and religious influences on patient compliance and disease management, and required community service experiences. Prereq: PPS 910 and PPS 919.

**PPS 923 PHARMACOLOGICAL BASIS FOR
THERAPEUTICS: NUTRITION, HEALTH PROMOTIONS.**

(3)

Consideration of the role of the pharmacist in health promotion and disease prevention including both pharmacologic and non-pharmacologic methods. Major problems of nutrition and certain metabolic/chronic disorders for which nutrition plays a pivotal role will be addressed including hypertension, cancer, and eating disorders. In addition the pharmacology of drugs affecting the gastrointestinal tract and drugs used to treat common gastrointestinal problems are discussed. Variable mixture of lecture, group discussion and independent study. Prereq: Admission to the first year, College of Pharmacy.

**PPS 926 NONPRESCRIPTION
PHARMACEUTICALS AND SUPPLIES II.**

(2)

A continuation of PPS 916. Variable mixture of lecture, group discussions and independent study. Prereq: Admission to the first year, College of Pharmacy and PPS 916.

**PPS 928 INTRODUCTORY PHARMACY
PRACTICE EXPERIENCE I.**

(4)

An introductory practice experience designed to provide students a structured, supervised program of participation in the practice of pharmacy. Experiences may involve on-call and evening/weekend responsibilities. Offered on a pass/fail basis only. Laboratory, 40 or more hours per week. Prereq: Successful completion of required courses in the 920 series and consent of instructor.

PPS 929 PATIENT CARE LABORATORY II.

(1)

A continuation of PPS 919. Prereq: PPS 919. Coreq: All concurrent PHR 92X series courses.

PPS 930 LEGAL, ETHICAL, AND ACCESS ISSUES IN PHARMACY.

(4)

The legal, ethical and access issues affecting the practice of pharmacy. Course includes community service experiences. Prereq: PPS 920.

PPS 939 PATIENT CARE LABORATORY III.

(2)

A continuation of PPS 929. Prereq: PPS 929. Coreq: All concurrent PHR 93X series courses.

PPS 940 EVIDENCE BASE FOR PHARMACY PRACTICE.

(4)

A discussion of the evidence base for pharmacy practice including sources of drug information, drug study design, applied data analysis, and biostatistics in the interpretation and critical analysis of biomedical literature with the purpose of developing evidence based care recommendations for a given patient or patient population. The course is implemented using a variety of educational methods including lectures, structured reading of biomedical literature, and practice in developing protocols to address various health-related research questions. Course includes community service experiences. Prereq: PPS 930.

PPS 946 ADVANCED PHARMACOTHERAPY I.

(5)

An advanced study of the pathology, pathophysiology and optimal treatment of common diseases. Through a series of case studies students will acquire and/or reinforce their skill at understanding diseases and developing and defending optimal treatment plans for successfully managing those diseases. The case studies utilized will integrate relevant pathophysiological, pharmacokinetic, pharmaco-economic and pharmacological concepts with appropriate patient specific parameters. Students will be expected to communicate and defend their decisions, including the process followed in making those decisions, in understandable, appropriate written and verbal formats. Variable mixture of discussion, lecture, independent study and laboratory. Prereq: PHR 93X series courses; coreq: PHS 947 and PPS 949.

PPS 948 INTRODUCTORY PHARMACY PRACTICE EXPERIENCE II.

(4)

A continuation of PPS 928 – Introductory Pharmacy Practice Experience I. Prereq: Successful completion of required PHR 940 series courses and consent of instructor.

PPS 949 PATIENT CARE LABORATORY IV.

(1)

A continuation of PPS 939. Prereq: PPS 939. Coreq: All concurrent PHR 94X series courses.

PPS 950 PHARMACEUTICAL POLICY AND PUBLIC HEALTH.

(4)

An introduction to health economics, pharmaceutical policy and public health, including issues of access to and disparities in healthcare and pharmaceuticals, health and disease indicators, health promotion, emergency preparedness, and the involvement of the pharmacist in public health and pharmaceutical policy. Course includes community service experiences. Prereq: PPS 940.

PPS 953 CURRENT TOPICS IN PHARMACY SEMINAR.

(1)

A seminar course dealing with some of the current clinical and nonclinical issues affecting health care and health care practitioners. Prereq: PPS 940.

PPS 957 ADVANCED PHARMACOTHERAPY II.

(5)

A continuation of PPS 946. Variable mixture of discussion, lecture, independent study and laboratory. Taught part of term. Prereq: Admission to third year, College of Pharmacy; co-req: PPS 959.

PPS 959 PATIENT CARE LABORATORY V.

(2)

A continuation of PPS 949. Prereq: PPS 949. Coreq: All concurrent PHR 95X series courses.

PPS 960 PHARMACY PRACTICE MANAGEMENT.

(5)

A discussion of pharmacy practice management in both community and health system practice settings including general business, human, financial, and operations management, and quality assurance/risk management issues. Course includes community service experiences. Prereq: PPS 950.

PPS 966 ADVANCED PHARMACOTHERAPY III.

(5)

A continuation of PPS 957. Variable mixture of discussion, lecture and independent study. Taught part of term. Prereq: Admission to the third year, College of Pharmacy; PPS 957, 959; co-req: PPS 969.

PPS 967 ADVANCED PHARMACOTHERAPY IV.

(5)

A continuation of PPS 966. Variable mixture of discussion, lecture and independent study. Taught part of term. Prereq: Admission to third year College of Pharmacy; PPS 957, 959; co-req: PPS 969.

PPS 969 PATIENT CARE LABORATORY VI.

(2)

A continuation of PPS 959. Prereq: PPS 959. Coreq: All concurrent PHR 96X series courses.

#PPS 970 INTRODUCTION TO TRANSPLANT PHARMACY PRACTICE.

(2)

This course will build upon principles of immunology covered in pre-pharmacy and PharmD coursework and introduce students to the principles of solid organ transplantation (SOT) and the role of a pharmacist in the care of transplant recipients. Prereq: Participants should be students in good standing in the third professional year of the UK College of Pharmacy Curriculum.

#PPS 971 PHARMACY PRACTICE AND HEALTHCARE IN JAPAN.

(2)

This course will allow pharmacy students to explore the pharmacy and healthcare systems of Japan. Students will learn how Japanese history and culture influence healthcare today through lectures and visits to cultural sites and museums. Discussions about current healthcare systems will be amplified by visits to practice sites, such as hospitals and community pharmacies. Current healthcare systems of Japan and the USA will be compared and contrasted. Students will have the opportunity to develop their thoughts about the future of American healthcare through discussion and debate. Prereq: Admission to College of Pharmacy.

**PPS 972 INTRODUCTION TO THE ADVANCED PHARMACOTHERAPY
GATEWAY AND PHARMACY RESIDENCY TRAINING.**

(2)

This course introduces students to the concepts of the pharmacist's involvement in research, education, post-graduate training, and to local sites of scholarly clinical pharmacy practice. The course will provide information and tools for pursuing post-graduate training, including a curriculum vitae and foundational education on human subject protection and residency training. Prereq: Student in good standing in the second professional year of the College of Pharmacy curriculum.

PPS 973 INTRODUCTION TO CRITICAL CARE PHARMACY.

(2)

Advanced, clinically-focused course building on critical care foundation provided in PHR 956/ PPS 957. Prereq: Successful completion of PHR 956/PPS 957.

PPS 974 CLINICAL ASPECTS OF PRESCRIPTION MEDICATIONS.

(2)

A discussion of the clinical aspects of prescription medications designed to supplement, integrate and enhance the material covered in the Patient Care Laboratory course series (PHR 919-969) and the Advanced Pharmacotherapy course sequence (PPS 946, PHR 956, PPS 957, PPS 966 and PPS 967). Emphasis is placed on 1) a critical analysis of the important difference between various drugs and drug classes, and 2) refining drug information and clinical communication skills through simulated written drug consults and oral exams involving other health care practitioners. Prereq: PHR 956 and PPS 957. Coreq: PPS 960, 966, 967 and 969.

PPS 975 EMERGENCY MEDICINE.

(2)

Emergency Medicine is an evolving and increasingly recognized practice area for clinical pharmacists. As interest and professional opportunities continue to expand in this therapeutic arena, it is imperative for students to become cognizant of the various aspects of this unique specialty. In addition, the practice of Emergency Medicine is a collection of various therapeutic areas, so this course will not only serve to expose the learner to many new and exciting topics but also serve as a refresher of many topics that are briefly covered in the regular curriculum with an added emphasis on the rapid treatment of the undifferentiated patient. Prereq: PY 3.

†PPS 976 COMPUTER AND INFORMATION TECHNOLOGIES IN PHARMACY.**PPS 977 HERBS AND DIETARY SUPPLEMENTS.**

(2)

This Blackboard-based elective course focuses on herbs and dietary supplements used for common conditions. The evidence-based course includes readings with weekly quizzes and sets of discussion questions. The course prepares pharmacy students to assist patients in the appropriate use of these products. Prereq: Admission to IPPE I, College of Pharmacy.

PPS 978 PEDIATRIC PHARMACOTHERAPY.

(2)

This course explores additional information relating to pediatric drug therapy and factors that build on the existing knowledge base of the student, to prepare students to address drug related problems in the pediatric patients and to demonstrate competency in evaluating patient drug therapy in at least two patients as well as numerous case scenarios. Since the class size is kept at about 15 students, a seminar and hands on approach to simulations will be done along with didactic teaching and group discussion. Materials will be provided to supplement classroom interaction; at least one laboratory experience is planned. Discussions will be provided to allow the interchange necessary to explain individual judgments. Active learning processes will be employed in order to facilitate inter-professional communication skills and to allow student's exposure to a variety of pediatric pharmacy practitioners. The course is presented in a series of therapeutic modules facilitated with the use of Blackboard® technology. Prereq: Permission of instructor.

PPS 979 TOXICOLOGY IN CLINICAL PRACTICE. (2)

Potentially any substance can be considered a poison if enough of it is ingested, and patients who ingest chemicals, drugs and dietary supplements are commonly seen in clinical practice. This elective course will help develop the pharmacy student's knowledge of the toxic effects of chemicals and drugs when humans are exposed to these agents in acute/toxic overdoses. In addition, the course will emphasize how to prevent exposures, and drug therapy associated with each type of ingestion. This elective is highly recommended for students interested in critical care and/or emergency medicine as clinical toxicology consultations are an element of practice in these areas. Coreq: PY3 core courses.

PPS 980 BEHAVIOR MODIFICATION COACHING. (2)

This elective course is a companion course to the Behavior Modification Project that is part of the PPS 923 Nutrition, Health Promotion, Disease Prevention course. Each student will serve as the coach for a group of 5-6 PY1 students as they complete their semester long project. Coaches will conduct weekly meetings, review student record keeping, provide motivation and accountability to PY1 students, and serve as role models in behavior modification. Coaches also develop skills in human resource management. Prereq: Admission to PY2, College of Pharmacy.

PPS 981 THINKING CREATIVELY FOR INNOVATION. (2)

This 2 credit course revolves around developing the creative and critical thinking skills necessary for innovation and change. This involves exercises and activities to help students develop original and creative solutions to problems. The objective of this course is to equip students with skills to think through, develop and present original, creative ideas that have the potential to contribute to improvement and/or innovation in the healthcare professions. Prereq: Advancement to PY2 or PY3 year in the College of Pharmacy.

#PPS 982 PHARMACY WITHOUT BORDERS: AUS-CHINA GLOBAL CLASSROOM. (2)

This globally instructed and interactive course will be taught collaboratively and non-traditionally by the University of Kentucky and Peking University (Beijing, China). The course will compare pharmacy practice, health care systems, and various treatment modalities in China and the United States. Students will be challenged to understand and apply healthcare concepts within the context of different cultures and health-belief systems. Obstacles and barriers to care will be presented from the viewpoints of differing cultures, and students will work in cross-cultural teams using varied media to explore a range of course-related topics. Prereq: Admission to the College of Pharmacy.

#PPS 983 INTERPROFESSIONAL TEAMWORK IN GLOBAL HEALTH. (variable)

This course in interprofessional education and practice is designed as a companion to the Shoulder-to-Shoulder Global Ecuador health brigade or other similar immersion experiences to provide students with an opportunity to work effectively as an interprofessional team in an international or other community setting to promote positive, holistic health outcomes for individuals and communities. For most short-term, international medical experiences, provision of pharmaceutical agents is a central role. While these functions closely mirror pharmacy functions in other settings, the additional challenge of a short-term, international, resource-limited environment calls for additional considerations. This course will help prepare students for future participation in such encounters. Prereq: Admission to the College of Pharmacy.

#PPS 984 HEALTHCARE YESTERDAY, TODAY & TOMORROW: A COMPARISON OF AMERICAN AND UNITED KINGDOM HEALTH SYSTEMS. (3)

This course will allow the student to explore the shared past of American and United Kingdom healthcare systems through visits to historical sites and collections including the Royal College of Physicians, the Florence Nightingale Museum, and the Royal Pharmaceutical Society. Discussions about current healthcare systems will be amplified by visits to practice sites, such as hospitals, pharmacies, and general practices. Students will have the opportunity to develop their thoughts about the future of American healthcare through discussion and debate. Prereq: Professional student status.

†PPS 985 CONTROVERSIES IN EMERGENCY MEDICINE.

PPS 986 INTRODUCTION TO ACADEMIC PHARMACY. (2)

Students will learn about basic elements of a career in academia, including faculty appointments and professional program accreditation. Students will also learn the fundamentals of teaching in higher education, including distance learning, lesson planning, and student engagement. This course will culminate with a final presentation, including a lesson plan, on a pharmacy topic of the student's choice. Prereq: Admission to UK College of Pharmacy third academic year (PY3) and/or permission of instructor.

†PPS 988 ADVANCED PHARMACY PRACTICE EXPERIENCE.

PPS 990 SUBSTANCE USE DISORDERS: HEALTH IMPLICATIONS, POLICIES AND PREVENTION STRATEGIES. (3)

This course provides an overview of the impact of alcohol, tobacco, and other drug use disorders on individuals and populations from the local, state, national and international perspectives. Topics include methods for measuring the impact of substance use disorders, risk and protective factors, prevention strategies and policies, "harm reduction", and the relationship between substance use disorders and crime. Prereq: Professional student status.

PPS 991 ADVANCED COMMUNITY PRACTICE. (6)

This course is an advanced pharmacy practice experience (APPE) focused on the prevention, diagnosis, treatment and management of diseases in patients receiving care in the community setting. Emphasis is placed on choosing rational drug therapy, providing contemporary patient care services and functioning as a member of an interdisciplinary health care team. Experiences

may include on call and evening/weekend responsibilities. Prereq: Admission to the fourth year, College of Pharmacy; and permission of instructor.

PPS 992 ADVANCED COMMUNITY HOSPITAL. (6)

This course is an advanced pharmacy practice experience (APPE) focused on the prevention, diagnosis, treatment and management of diseases in patients receiving care in the community hospital setting. Emphasis is placed on choosing rational drug therapy, providing contemporary patient care services and functioning as a member of an interdisciplinary health care team. Experiences may include on call and evening/weekend responsibilities. Prereq: Admission to the fourth year, College of Pharmacy; and permission of instructor.

PPS 993 AMBULATORY CARE PRACTICE. (6)

This course is an advanced pharmacy practice experience (APPE) focused on the prevention, diagnosis, treatment and management of diseases in patients receiving care in an ambulatory setting. Emphasis is placed on choosing rational drug therapy, providing contemporary patient care services and functioning as a member of an interdisciplinary health care team. Experiences may include on call and evening/weekend responsibilities. Prereq: Admission to the fourth year, College of Pharmacy; and permission of instructor.

PPS 994 ACUTE CARE/INPATIENT PRACTICE. (6)

This course is an advanced pharmacy practice experience (APPE) focused on the prevention, diagnosis, treatment and management of diseases in patients receiving care in an acute care/inpatient setting. Emphasis is placed on choosing rational drug therapy, providing contemporary patient care services and functioning as a member of an interdisciplinary health care team. Experiences may include on call and evening/weekend responsibilities. Prereq: Admission to the fourth year, College of Pharmacy; and permission of instructor.

PPS 995 PATIENT CARE PRACTICE ELECTIVE. (6)

This course is an advanced pharmacy practice experience (APPE) elective focused on the prevention, diagnosis, treatment and management of disease in patients receiving care in a variety of settings, including community, hospital, long-term care, and specialized clinics. Emphasis is placed on integrating knowledge of therapeutics and pathophysiology in the provision of care to patients, providing drug therapy management, delivering contemporary patient care services, and functioning as a member of an interdisciplinary health care team. Prereq: Admission to the fourth year, College of Pharmacy; and permission of the instructor.

PPS 996 NON-PATIENT CARE PRACTICE ELECTIVE. (6)

This course is an advanced pharmacy practice experience (APPE) that allows the student to sample pharmacy practice opportunities outside of the required experiences. An elective experience may be selected (but not limited to) in the following areas: Practice management administration, pharmacy education, pharmacoconomics, pharmacoepidemiology, research, pharmaceutical industry, association management, governmental, and international experiences. Prereq: Admission to the fourth year, College of Pharmacy; and permission of the instructor.

PRO Prosthodontics

***PRO 820 PRECLINICAL COMPLETE DENTURE PROSTHODONTICS (LECTURE). (2)**

This didactic course provides an introduction to basic concepts of diagnosis and treatment planning, placement and maintenance of complete dentures, as well as the related biological and mechanical factors that must be incorporated for living tissue to be compatible with complete dentures. Prereq: Advancement to second year standing or consent of course director; coreq: PRO 822.

***PRO 821 CLINICAL COMPLETE DENTURE PROSTHODONTICS. (1)**

The treatment of a patient with complete maxillary and mandibular denture needs is performed in the clinic by the student. The student will assist an upper level student in the examination of a complete denture and a removable partial denture recall patient. Coreq: PRO 820.

PRO 822 PRECLINICAL COMPLETE DENTURE PROSTHODONTICS (LAB). (2)

This preclinical laboratory course provides an introduction to basic concepts of fabrication of complete dentures as well as the related biological and mechanical factors that must be incorporated for living tissue to be compatible with complete dentures. Prereq: Advancement to Second Year standing or consent of course director. Coreq: PRO 820.

***PRO 824 REMOVABLE PARTIAL DENTURES. (2)**

This course is designed to teach the student the basic principles and the practical procedures in providing a therapeutic and functional removable restoration. The course also presents the laws and effects of leverages as related to removable partial dentures as well as the considerations for support, occlusion, and health of all oral structures. Prereq: PRO 820.

***PRO 830 ADVANCED REMOVABLE PROSTHODONTICS. (1)**

This course is a continuation of PRO 820. It presents more advanced technique and treatment planning for complex prosthodontic needs. Subjects included are immediate dentures, overdentures and dental implants. Prereq: PRO 820 and PRO 824.

***PRO 831 CLINICAL REMOVABLE PROSTHODONTICS. (2)**

A patient with complete denture needs is treated by the student clinically in the course. The student may opt to treat a patient with immediate, intermediate or overdenture needs. He may initiate and/or complete the treatment of two patients with removable partial denture needs. The student may also treat an optional, additional patient in need of a complete or removable partial denture. The student will recall a minimum of two removable prosthodontic patients and perform any treatment necessary for these patients. Prereq: PRO 821 ; coreq: PRO 830.

***PRO 834 PRECLINICAL RESTORATIVE DENTISTRY III. (4)**

This is a preclinical course with emphasis on dental hard tissue surgery and restorative procedures for anterior and posterior fixed prosthodontics. Contemporary principles of fixed prosthodontics, including the long term maintenance of dental health, are presented in lectures and applied in practice using manikins. Knowledge gained in previous restorative dentistry courses are applied to more extensive restorations. Prereq: RSD 822, 823, 824, 825 and 826.

***PRO 836 ADVANCED FIXED PROSTHODONTICS AND TREATMENT PLANNING. (2)**

This course is a lecture series concerning diagnosis and treatment planning for fixed prosthodontics care and the principles of providing that care. The relationship of tooth restoration and replacements to occlusion, periodontics, orthodontics and removable prosthodontics in both treatment planning and treatment is emphasized. Prereq: PRO 824, PRO 834, and CDS 835; and/or consent of course director.

***PRO 841 ADVANCED CLINICAL REMOVABLE PROSTHODONTICS. (2)**

This course covers basically the same area as PRO 831 with the exception that the student is to treat the patient with complete denture needs with less supervision from the instructors. If not done previously, the student must initiate and complete the treatment of two patients with removable partial denture needs. The student will recall three removable prosthodontic patients and will perform any treatment necessary for these patients. Prereq: PRO 831.

PS Political Science

Note: It is assumed that all prerequisites include, in addition to any specific course listed, the phrase "or equivalent," or "consent of instructor."

PS 101 AMERICAN GOVERNMENT. (3)

A survey of national government and the political process in the United States, with emphasis on the Constitution, the President, Congress, and the judicial system.

PS 210 INTRODUCTION TO COMPARATIVE POLITICS. (3)

A general introduction to the domestic politics of countries in the various regions of the world, with an emphasis on the concepts used to understand why political issues and processes differ across developed and developing nations. Students also learn how domestic politics are shaped by super-national institutions and by national integration into a global economy.

PS 230 INTRODUCTION TO INTERNATIONAL RELATIONS. (3)

An introduction to world politics, with an emphasis on conflict and compromise at the international level but also considering domestic political interactions with global consequences. Students learn how social scientists analyze international relations in a variety of policy areas, including both military/defense and economic.

PS 240 INTRODUCTION TO POLITICAL THEORY. (3)

An introduction to modern political thought as it relates to debates over the meaning of democracy, citizenship, justice, authority, and identity. Readings and discussions center on the themes and ideologies dominant in Western political theory, but also will explore contemporary challenges to that tradition, such as feminist political theory and the work of theorists concerned with what is popularly called globalization.

PS 360 POLITICS OF LAW AND COURTS. (3)

A survey of the actors in American government and society who shape the meaning of the law, focusing especially on the judiciary. The course will outline the structure of the judicial system including both state and federal courts as well as the judicial process followed within that system. Prepares students for advanced study in public law and judicial politics. Prereq: UN2 status.

PS 363 CRIMINAL COURTS AND PROCESS IN THE U.S. (3)

The course is an introduction to the criminal-court process in the United States. The course covers how the criminal process is organized, outlines the steps and actors in the criminal process, and explores the impact of criminal justice on society. Prereq: UN2 status.

PS 372 INTRODUCTION TO POLITICAL ANALYSIS. (3)

Introduction to the basic knowledge of research methodology in political science; a review of methods of data collection; historical, quantitative and comparative techniques of analysis. Prereq: UN2 status; PS majors only.

PS 391 SPECIAL TOPICS IN POLITICAL SCIENCE (Subtitle required). (3)

Course will focus on selected topics drawn from various areas of political science taught by faculty members with special interests and competence. May be repeated in courses of differing topics to a maximum of 12 credits. Prereq: UN2 status.

PS 395 INDEPENDENT WORK. (1-6)

Consent of instructor. May be repeated to a maximum of 12 credits. Prereq: A standing of 3.0 in political science courses.

PS 399 INTERNSHIP IN GOVERNMENT. (1-6)

This course is designed for students who are participating in a state, local or federal internship program with which the political science department is associated. The student must have

approval of the department chairperson upon the recommendation of the Committee on Internship and Experiential Education to take the course, negotiate a learning contract with a departmental academic supervisor, and provide the department with a report or a paper on his internship. Pass/Fail only. May be repeated to a maximum of 12 credits.

PS 410 TOPICS IN REGIONAL POLITICS (Subtitle required). (3)

A survey of politics and government in one region of the world. The course will consider the region's unique political character, but also explain how and why nations within the region differ from each other politically. Some sections will compare and contrast a region's political systems in general, whereas others may be more specialized topically. May be repeated to a maximum of 12 credits under differing subtitles. Prereq: PS 210 or PS 212.

PS 415G COMPARATIVE JUDICIAL POLITICS. (3)

A comparison of the judicial institutions operating across a wide variety of political systems. Emphasis will be on topics such as why different nations or regions evolve different types of courts, how those courts gain legitimacy with the public, and what forces shape the behavior of judges serving in these various court systems. Prereq: PS 210, PS 212, or PS 360.

PS 417G SURVEY OF SUB-SAHARAN POLITICS. (3)

A survey of sub-Saharan government and politics intended to give the student broad knowledge about the setting of African politics, precolonial African political systems, the political legacies of major European colonial powers, and problems of political development. Prereq: PS 210 or 212. (Same as AAS 417G.)

PS 419G THE GOVERNMENTS AND POLITICS OF EASTERN ASIA. (3)

A comparative analysis of the modern political experiences of China and Japan, exploring their responses to the West, the development of differing political elites in each country, and contemporary problems of the Chinese Communist and Japanese politics. Prereq: PS 210 or 212.

PS 420G GOVERNMENTS AND POLITICS OF SOUTH ASIA. (3)

A comparative analysis of contemporary political development in India, Pakistan, Bangladesh and Sri Lanka, with emphasis on political cultures, participation, institutions and the capabilities of these political systems. Prereq: PS 210 or 212.

PS 427G EAST EUROPEAN POLITICS. (3)

This course is meant to provide an opportunity for advanced undergraduates and graduate students to (1) understand the historical, socioeconomic and philosophical context of the communist party states in Eastern Europe, (2) to learn who governs in Eastern Europe and the structures through which they rule, (3) to assess the "dynamics" of communist politics, i.e., factors contributing to political change vis-a-vis political continuity. Prereq: Junior or senior standing and instructor's written permission.

PS 428G LATIN AMERICAN GOVERNMENT AND POLITICS. (3)

A study of contemporary Latin American political institutions and of the dynamics of the Latin American political process. Prereq: PS 210 or 212.

PS 429G GOVERNMENT AND POLITICS IN RUSSIA AND THE POST-SOVIET STATES. (3)

Analysis of political development in the Soviet Union with emphasis on party-government relations, Communist ideology, and major approaches to the study of Soviet politics. Prereq: PS 210 or 212.

PS 430G THE CONDUCT OF AMERICAN FOREIGN RELATIONS. (3)

The formulation of American foreign policy from several analytic perspectives, with somewhat more emphasis on inputs and process than on substantive outputs. Prereq: PS 101 or consent of instructor.

PS 431G NATIONAL SECURITY POLICY. (3)

The organization and formulation of military policy; the theory and practice of deterrence; and the problems of disarmament and arms control. Prereq: PS 235 or consent of instructor.

PS 433G POLITICS OF INTERNATIONAL ECONOMIC RELATIONS. (3)

The course examines contending theoretical approaches to global political economy. These approaches are used to analyze various issues of global political economy, such as the international monetary system, multinational corporations, foreign aid, and trade. Prereq: PS 235.

PS 436G INTERNATIONAL ORGANIZATION. (3)

A study of the evolution of international organizations in the 20th Century. Examination of the increasing size, complexity, and diversity of contemporary global and regional international organizations. The role of international organizations in future world order.

PS 437G DYNAMICS OF INTERNATIONAL LAW. (3)

An examination of the politics of the development of international law and its operation in a multicultural world. Legal principles and international political processes are discussed through illustrative issue areas: management of conflict; distribution of territorial resources; environmental problems; and human rights. Prereq: PS 235 or PS 360.

PS 439G SPECIAL TOPICS IN INTERNATIONAL RELATIONS

(Subtitle required) (3)
 Course will focus on selected advanced topics in international relations drawn from various areas of that field of political science, taught by faculty members with special interests and competence. May be repeated in courses of differing topics for a maximum of 9 credits. Prereq: PS 235.

PS 441G EARLY POLITICAL THEORY.

(3)
 A survey of political theorists in the Western political tradition from classical Greece to the Renaissance. The formative influences upon our conceptions of politics, citizenship, justice, and natural rights will be highlighted and key issues in controversies over rhetoric and philosophy, time and political order, education and the body politic, and political action and human artifice will be illuminated.

PS 442G MODERN POLITICAL THEORY.

(3)
 Western political theory from Machiavelli to Marx and Weber with emphasis on the impact of early modern culture and liberalism upon contemporary views of power, individualism, community, and political consciousness. Key contributions of modern political theorists to perennial debates on power and the intellectual, institutional bases of modern constitutionalism, human nature and aggression, the sources of alienation, and the relation of modern science and technology to contemporary forms of domination will be explored.

PS 456G APPALACHIAN POLITICS.

(3)
 A study of the interrelationships of the Southern Appalachian region and its people with the larger American political system, culture, and economy. Selective examination of public policies and major issues and their development in the politics of the region.

PS 458 AMERICAN STATE AND LOCAL GOVERNMENT.

(3)
 A comparative examination of subnational governments, especially state governments but also smaller units such as cities, counties, and school districts. Readings and discussions will explore the variety of institutions and policies found across the United States, seeking an understanding of why places differ from each other politically. The course also will examine the relationship between the national government and the states. Prereq: PS 101; UN2 status.

PS 461G CIVIL LIBERTIES.

(3)
 A study of the philosophy and development of civil liberties in the U.S. Major concentration on the interpretation of constitutional guarantees by the Supreme Court. Prereq: PS 360.

PS 463G JUDICIAL POLITICS.

(3)
 A survey of how politics influences, and in turn is influenced by, the behavior of judicial institutions and the judges who staff them. Draws heavily on the social science literature studying judicial behavior, the structure of the court system, and the implementation of legal rulings. Prereq: PS 101 and UN2 status.

PS 465G CONSTITUTIONAL LAW.

(3)
 A non-chronological study of major Supreme Court decisions and recent issues relating to separation of powers, federalism, the commerce clause, taxes, criminal justice and other non-civil liberties areas. Prereq: PS 360.

PS 470G AMERICAN POLITICAL PARTIES.

(3)
 An analysis of American national and state party systems, organization, and functions; nominations and elections; and voting patterns. Prereq: PS 101; UN2 status.

PS 471 RACE, ETHNICITY AND POLITICS.

(3)
 An examination of the role that race and ethnicity play in the political arena. Students will explore the nature of race, racism, and ethnocentrism, as well as their impact on political institutions and public policy. Particular attention will be given to elections, public opinion, mass media and social movements in the United States. (Same as AAS 471.)

PS 472G POLITICAL CAMPAIGNS AND ELECTIONS.

(3)
 An analysis of individual voting behavior and candidate strategies during presidential and congressional elections. The effect of the mass media, political action committees, and political advertising on the vote decision is examined. Attention is also devoted to candidates' campaign organizations and communication strategies. Prereq: PS 101; UN2 status.

PS 473G PUBLIC OPINION.

(3)
 An introduction to the nature and content of public opinion, how polls are conducted, the political effects of polling, and the role of public opinion in the policymaking process. Prereq: PS 101; UN2 status.

PS 474G POLITICAL PSYCHOLOGY.

(3)
 An exploration of different models of political behavior, based on concepts of psychoanalysis, behaviorism, humanism, and social psychology. Prereq: PS 101 and PSY 100 or equivalent, or consent of instructor.

PS 475G POLITICS AND THE MASS MEDIA.

(3)
 The ways the modern mass media affect the dynamics of politics in the United States are examined in this course. Specific topics include the impact of television on political discourse; the structure and ownership of mass media; how news is made and how it influences our political attitudes and behaviors; the role of the media in campaigns, elections and policy making. Prereq: PS 101.

PS 476G LEGISLATIVE PROCESS.

(3)
 A study of Congress and the state legislatures, covering the legislative power structure, legislative committees, the selection of legislators and the roles they play, decision making, and the relations of the legislative and executive branches. Prereq: PS 101; UN2 status.

PS 479 WOMEN AND POLITICS.

(3)
 A study of the role of women as political actors in the United States including the status of women in American society and the contribution of government policy to maintaining or changing that status. The political behavior of women at the mass and elite level will be examined.

PS 480G GOVERNMENT AND THE ECONOMY.

(3)
 This course analyzes the relationship between political and economic systems in the modern, democratic, capitalist state. While the focus is primarily upon the United States, other political/economic systems as well as more general theoretical statements will be considered. Prereq: PS 101 and ECO 101 or equivalent.

PS 484G THE AMERICAN PRESIDENCY.

(3)
 A course in the American presidency, emphasizing institutional developments and the impact of recent presidents on the office, on other governmental institutions, on domestic and foreign policies, and including an examination of the broader context of the executive branch of government. Prereq: PS 101; UN2 status.

PS 489G THE ANALYSIS OF PUBLIC POLICY.

(3)
 A study of the development, implementation and impacts of government policies; and the sources of variation in policies adopted by differing governmental units. Prereq: PS 101; UN2 status.

PS 490 HONORS IN POLITICAL SCIENCE.

(3)
 This course will provide, in a seminar setting, the opportunity for students to concentrate on developing and implementing research projects on topics of their own choice. The course will allow discussion of various perspectives in political science as well as on problems encountered in the research process. Prereq: Senior standing with 3.25 overall GPA and 3.50 GPA in major.

PS 492 SEMINAR IN POLITICAL SCIENCE

(Subtitle required) (1-3)
 A topical seminar primarily for majors in political science and in related fields. May be repeated to a maximum of 12 credits in seminars of differing topics. Prereq: UN2, previous PS course.

PS 538 CONFLICT AND COOPERATION IN LATIN AMERICAN RELATIONS.

(3)
 An examination of (1) national development strategies as determinants of Latin American foreign policies, (2) the origins and political consequences of economic nationalism, (3) historical patterns of U.S. response to reformist and/or revolutionary change, (4) the role of extra-continental contenders for influence in the Americas, and (5) at least one contemporary foreign policy issue in inter-American relations. Prereq: PS 428G or permission of instructor.

PS 545 AMERICAN POLITICAL THOUGHT.

(3)
 This course explores the American tradition of political thought, its formation, and the ways it is involved in major problems of culture, political economy, ideology, and identity. Alternative ideas of work, power, political obligation, science and technology, and related issues are examined. Relationships of theory and practice, public and private, and government and society are analyzed. Prereq: UN3 status.

PS 557 KENTUCKY GOVERNMENT AND POLITICS.

(3)
 A study of current political issues and institutions in Kentucky.

PS 566 CONSTITUTIONAL INTERPRETATION.

(3)
 A study of the political and the philosophical origins of the U.S. Constitution and of the competing and overlapping philosophies about how it should be interpreted in modern times. Prereq: One of the following: PS 461G, PS 465G, or HIS 573.

PS 572 INTRODUCTION TO QUANTITATIVE POLITICAL METHODOLOGY.

(3)
 Introduction to quantitative research methods used by political scientists. The course introduces students to data sets and statistical software commonly used in political science, and basic analysis techniques used to analyze political data. Prereq: For undergraduates, completion of PS 372.

PS 580 THE BUDGETARY PROCESS.

(3)
 A study of the development of budgetary techniques in the United States, the uses to which budgets are put, the roles of the budgetary process in budgetary politics and in the functioning of government, and the distribution of government resources through the budget.

PS 620 COMPARATIVE POLITICS: THEORY AND METHOD.

(3)
 A study of the evolution and development of comparative government and politics within the discipline with particular emphasis upon the formulation, application, and limitations of the theories, taxonomies and conceptual frameworks employed in comparative research.

PS 671 STRATEGIES OF INQUIRY IN POLITICAL SCIENCE.

(3)
 Analysis of research paradigms for political science, and investigation into the foundations of scientific inquiry. Emphasis on topics such as explanation, concept formation, the construction and function of theory, data, and verification.

PS 672 INTRODUCTION TO TECHNIQUES OF POLITICAL RESEARCH.

(3)
 Basic techniques of data collection, coding, and processing applicable to political research are introduced. Various statistical techniques of data analysis are discussed and applied to political data. Prereq: PS 671, familiarity with appropriate statistical methods and consent of instructor.

PS 674 PROSEMINAR IN THEORIES OF INTERNATIONAL POLITICS. (3)

A survey of the major theoretical approaches to the study of international systems and processes.

PS 680 PROSEMINAR IN POLITICAL INSTITUTIONS AND PROCESS. (3)

A thorough survey of recent literature on political institutions and the political process, including political parties and the legislative and executive processes, at the national and sub-national levels.

PS 681 AMERICAN POLITICAL BEHAVIOR. (3)

A proseminar providing a survey of major theoretical approaches and empirical research in the field of American political behavior. Intended to explore various individual-level models of behavior and then apply them to specific forms of political behavior.

PS 684 PROSEMINAR IN POLICY STUDIES. (3)

A survey of the various approaches to the study and analysis of public policy impacts. Special emphasis will be given to the normative and ethical implications of alternative conceptualizations of the policy process and the role of the policy analyst.

PS 690 PROSEMINAR IN CONTEMPORARY POLITICAL THEORY. (3)

An examination of contemporary political theories, especially their relationships to theoretical issues in policy analysis. Major problems such as inquiry and change, ideology and power, and knowledge and authority will be studied, particularly in the context of public policy.

PS 711 TOPICAL SEMINAR IN POLITICAL SCIENCE (Subtitle required). (3)

Topic and instructor will vary from semester to semester. Faculty member presents seminar on topic in which he has particular research competence or special expertise. May be repeated under different subtitle to a maximum of nine hours. Prereq: Two semesters of graduate work and consent of instructor.

PS 731 INTERNATIONAL SECURITY/CONFLICT ANALYSIS. (3)

The seminar examines international security affairs, with an emphasis on the sources and nature of conflict, and methods of conflict, the patterns of conflict, and methods of conflict resolution and regulation, both within states and among them. Prereq: Consent of instructor.

PS 732 COMPARATIVE FOREIGN POLICY (Subtitle required). (3)

This seminar will emphasize comparative analysis of foreign policy. It will compare the foreign policies of a number of countries in order to develop propositions and arrive at generalizations regarding foreign policy process and behavior. The comparative focus will vary. May be repeated to a maximum of six credits under different subtitles.

PS 733 INTERNATIONAL POLITICAL ECONOMY. (3)

The course examines the contending theoretical perspectives and substantive functional issues underlying the politics of international economic relations. Special attention is paid to international trade and money, the politics of North-South relations, and comparative foreign economic policies. Prereq: Consent of instructor.

PS 734 GREAT BOOKS OF WORLD POLITICS. (3)

Overview of classic texts on war and statecraft. Prereq: Consent of instructor. (Same as DIS 710.)

PS 735 DEMOCRACY AND INTERNATIONAL AFFAIRS. (3)

Discussion of the impact of the global spread of democracy on foreign policy and war. Prereq: Graduate status and consent of instructor. (Same as DIP 715.)

PS 737 TRANSNATIONAL ORGANIZATIONS AND PROCESSES. (3)

An analysis of approaches to the study of international, transnational and regional political and economic organizations and processes within the context of world politics. An examination of the impact of these activities and processes on contemporary problems of world order. Prereq: Graduate student status.

PS 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

PS 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

PS 750 POLITICAL PARTIES AND ELECTIONS IN AMERICA. (3)

A study of the organization and functions of political parties, nominations and elections, and voting alignments. Prereq: An undergraduate political parties course or consent of instructor.

PS 756 REGIONAL POLITICS (Subtitle required). (3)

This seminar focuses on the domestic politics and international relations of countries within a specific geographic region (Latin America, the Commonwealth of Independent States, Western Europe, Africa, East Asia, etc.). Theoretical foci include political economy, policymaking, regional integration and national security, development, and political culture.

PS 760 SEMINAR IN JUDICIAL PROCESS. (3)

A thorough survey of literature in judicial process, focusing largely on judicial recruitment and decision-making, litigants' strategies, the implementation and impact of judicial policies and

relations between the courts and other power centers. May be repeated to a maximum of six credits.

PS 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

PS 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

PS 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

PS 772 ADVANCED PROBLEMS IN RESEARCH METHODS. (3)

A seminar in selected topics; the application of mathematical models and advanced statistical techniques to political science data. May be repeated to a maximum of six credits.

PS 775 SEMINAR IN PUBLIC POLICY. (3)

A political analysis of the domestic policy process including the formation, implementation, and impact of policy.

PS 778 RESEARCH PROBLEMS IN TRANSNATIONAL POLITICS. (3)

This seminar focuses on research strategies that can be utilized in dealing with problems in transnational politics. May be repeated to a maximum of six hours with consent of the instructor. Prereq: PS 620 or PS 674.

PS 780 LEGISLATIVE BEHAVIOR. (3)

A study of recent research in the legislative process emphasizing both the substantive and methodological aspects. Prereq: An upper division course in the legislative process or consent of instructor.

PS 795 SPECIAL PROBLEMS IN POLITICAL SCIENCE. (1-3)

Specific programs of readings are developed to meet the needs of individual students. May be repeated to a maximum of six credits for master's students and 12 credits for Ph.D. students. Prereq: Any 600 level course in political science or consent of the Director of Graduate Study.

PS 796 DIRECTED RESEARCH IN POLITICAL SCIENCE. (1-3)

Individual research in a particular field of political science under the supervision of selected faculty. Open to advanced graduate students who are prepared for intensive study and research beyond that offered in regular classes in each field. May be repeated to a maximum of six hours. Prereq: Consent of the instructor and the director of graduate studies.

PSC**Psychiatry****PSC 815 FIRST-YEAR ELECTIVE, PSYCHIATRY. (1-3)**

With the advice and approval of his or her faculty adviser, the first-year student may choose approved electives offered by the Department of Psychiatry. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the first-year curriculum. Pass-fail only. Prereq: Admission to first year, College of Medicine.

PSC 825 SECOND-YEAR ELECTIVE, PSYCHIATRY. (1-4)

With the advice and approval of his or her faculty adviser, the second-year student may choose approved electives offered by the Department of Psychiatry. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the second-year curriculum. Pass-fail only. Prereq: Admission to second-year medical curriculum and approval of adviser.

PSC 826 MECHANISMS OF DISEASE AND TREATMENT/PSYCHIATRY. (2)

This is an introduction to psychopathology and the psychiatric nomenclature for second year medical students. It occurs during the spring and fits within the context of the larger pathology segment of MD 826. Integration with the pharmacology sequence that runs before and after is in place. Prereq: Promotion to the second year of medical school.

PSC 841 ADULT PSYCHIATRY. (4)

Adult psychiatry elective in Inpatient Psychiatry, Consultation-Liaison/Emergency Psychiatry or Outpatient Psychiatry. Prereq: Third-year Psychiatry Clerkship, MD 833.

PSC 842 CHILD AND ADOLESCENT PSYCHIATRY ELECTIVE. (4)

Psychiatry elective for fourth-year medical students offering a combined experience in inpatient, outpatient, consult/liason child and adolescent psychiatry. Prereq: MD 833 or equivalent.

PSC 850-899 FOURTH-YEAR ELECTIVE FOR MEDICAL STUDENTS. (1-6)

With the advice and approval of the faculty adviser and the Student Progress and Promotions Committee, the fourth-year student may choose approved electives offered by the various departments in the College of Medicine. The intent is to provide the student an opportunity to develop his fund of knowledge and clinical competence. Prereq: Admission to the fourth year, College of Medicine and/or permission of the Student Progress and Promotions Committee.

Approved electives:

PSC 869 RESEARCH IN PSYCHIATRY
PSC 876 TRIPLE BOARD (PEDIATRICS, PSYCHIATRY, CHILD AND ADOLESCENT PSYCHIATRY) ELECTIVE
PSC 890 OFF-SITE CLERKSHIP IN PSYCHIATRY

PSY Psychology

PSY 100 INTRODUCTION TO PSYCHOLOGY. (4)

An introduction to the study of behavior covering theories, methods and findings of research in major areas of psychology. Topics covered will include the biological foundations of behavior; learning, perception, motivation, personality; developmental, abnormal, and social behavior; and methods of assessment. This course is a prerequisite to a significant number of courses in this and related areas of study. Lecture, three hours; laboratory/discussion, two hours.

PSY 195 ORIENTATION TO PSYCHOLOGY. (1)

An orientation to educational issues and career planning for students who have declared psychology as a major. Topics include career paths and opportunities, professional resources and issues, and educational planning. Pass/Fail only. Prereq: Declared major in Psychology, or consent of instructor.

PSY 215 EXPERIMENTAL PSYCHOLOGY. (4)

A study of the application of scientific methods to psychological research. Special emphasis is placed on the critical evaluation of contemporary research in experimental psychology. Particular attention is focused on the design, execution, and written report of laboratory research. Lecture, three hours; laboratory, two hours. Prereq: PSY 100 or equivalent and PSY major or PSY minor, or consent of instructor. Registration is open only to PSY majors during the priority registration window.

PSY 216 APPLICATIONS OF STATISTICS IN PSYCHOLOGY. (4)

An introduction to statistical procedures used in making decisions based on psychological data. May not be used to satisfy the laboratory requirement in the College of Arts and Sciences. Lecture, three hours; laboratory, two hours. Prereq: PSY 100 or equivalent and PSY major, or consent of instructor.

PSY 223 DEVELOPMENTAL PSYCHOLOGY. (3)

An introduction to the principles of developmental psychology as seen in human growth over the entire lifespan, with the primary focus on infancy through adolescence. Emphasis is placed on theory and data relating to the developmental aspects of cognition, language and personality. Prereq: PSY 100 or equivalent.

PSY 302 PSYCHOLOGY IN BUSINESS AND INDUSTRY. (3)

Survey of the many applications of psychological principles and methods to problems in business and industry. Topics include consumer research and marketing, personnel selection, performance appraisal, employee training, motivation, leadership, dynamics of work groups, job stress, and person-machine interactions. Prereq: PSY 100 or equivalent.

PSY 305 INTRODUCTION TO NEUROSCIENCE TECHNIQUES. (4)

This introductory laboratory course will provide students with practical knowledge and hands-on experience in basic behavioral, anatomical and physiological techniques used by laboratory scientists in the investigation of the nervous system. It is designed as a gateway to independent research experiences in working neuroscience laboratories. Prereq: BIO 302 Introduction to Neuroscience or equivalent. (Same as ANA 305.)

PSY 311 LEARNING AND COGNITION. (3)

Theory and experimental techniques in the study of learning and cognition. Emphasis on research in the biological basis of learning, perceptual processing, classical conditioning, instrumental conditioning, memory, and language. Prereq: PSY 100 or equivalent and PSY 215 or 216 and PSY major or minor. Registration is open only to PSY majors during the priority registration window.

PSY 312 BRAIN AND BEHAVIOR. (3)

An introduction to structural and functional characteristics of the nervous system. The emphasis is on exploring the relationship between brain and behavior. Topics range from simple structures and behaviors to more complex functions. The biological basis of normal and abnormal behavior is explored from a multidisciplinary perspective. Prereq: PSY 100 or equivalent and PSY 215 or PSY 216 or STA 296 and declared major or minor in psychology or neuroscience. Registration is open only to psychology and neuroscience majors during the priority registration window.

PSY 313 PERSONALITY AND INDIVIDUAL DIFFERENCES. (3)

An introduction to the psychology of individual differences, theories of personality and personality development. Individual differences in cognitive ability and personality will be addressed. Differing theoretical approaches to personality will be covered. Prereq: PSY 100 or equivalent and PSY 215 or 216 and PSY major or minor. Registration is open only to PSY majors during the priority registration window.

PSY 314 SOCIAL PSYCHOLOGY AND CULTURAL PROCESSES. (3)

A selective survey of classic and contemporary theories and research in social psychology from a multicultural perspective. Topics will include social perception, the self, attitudes, aggression, prejudice, and group processes. Credit is not given to students who already have credit for PSY/SOC 344. Prereq: PSY 100 or equivalent and PSY 215 or 216 and PSY major or minor. Registration is open only to PSY majors during the priority registration window.

PSY 320 INTRODUCTION TO FORENSICS: PSYCHOLOGY AND LEGAL ISSUES. (3)

This course examines the implications of psychological theory and methods for law and the criminal justice system. There is a concentration on psychological research on legal topics (e.g., confessions, eyewitness testimony, jury decision-making, sentencing), social issues (e.g., theories of crime, the death penalty, children and the legal system, race and legal issues, victims of crime), and on psychologists as an important component of the legal system (assessing insanity, competence to testify, criminal profiling).

***PSY 331 THE PSYCHOLOGY OF ADJUSTMENT. (3)**

Theoretical and empirical analysis of how people adjust to positive and negative life stressors (e.g., immigration, marriage, death/loss, and diagnosis of a chronic disease). Topics will include hope, personality, mindfulness, post-traumatic stress, substance use, and social support. Prereq: PSY 100 or equivalent.

PSY 333 ABNORMAL PSYCHOLOGY. (3)

A study of the major mental disorders, such as anxiety, mood, substance use, personality, and psychotic disorders, and the biological, psychological, and sociological factors which contribute to their causation. Prereq: PSY 100 or equivalent and one of the following: PSY 215, 216 or 223.

PSY 344 SOCIAL PSYCHOLOGY. (3)

Theoretical and empirical analysis of individual behavior in the social setting with particular emphasis on social learning, motivation, and the measurement, formation, and changing of social attitudes. (Note: Not open for graduate credit to graduate students in Psychology and Sociology.) Credit is not given to students who already have credit for PSY 314. Prereq: PSY 100 or equivalent.

PSY 350 CAREERS IN PSYCHOLOGY. (3)

This course is designed as an introduction to various career opportunities for students earning a BA or BS in Psychology. In addition, the course will cover various skills (e.g., resume development, interviewing skills, library research) that are necessary for applying for an advanced degree or a job. Cannot receive credit for both PSY 350 and A&S 350. Prereq: Psychology major or Psychology minor.

***PSY 393 RESEARCH IN NEUROSCIENCE. (1-3)**

An independent research project in an area of neuroscience under the direction of a faculty mentor. A research contract must be signed by the student and the faculty research mentor. May be repeated to a maximum of 12 credits, in combination with other independent research credit hours. Students should be capable of doing "independent research" in the sense that they can conduct the experiments with little direct supervision. Students are expected to become familiar with related research in the current literature by regularly reading scientific journals. Prereq: Psychology or Neuroscience or Biology major and permission of faculty research mentor. A signed contract between student and faculty member must be filed prior to enrollment in the course.

***PSY 394 RESEARCH IN PSYCHOLOGY. (1-3)**

An independent research project in an area of Psychology under the direction of a Faculty Research Mentor. A research contract must be signed by the student and the Faculty Research Mentor. May be repeated to a maximum of 12 credits, in combination with other independent research credit hours. Students should be capable of doing "independent research" in the sense that they can conduct the experiments with little direct supervision. They are expected to become familiar with related research in the current literature by regularly reading scientific journals. Prereq: Psychology or Neuroscience major and permission of faculty research mentor. A signed contract between student and faculty member must be filed prior to enrollment in the course.

***PSY 395 INDEPENDENT WORK IN PSYCHOLOGY. (1-3)**

Designed for advanced students who assist faculty members on research projects that are conducted in regular consultation with the faculty member. May be repeated to a maximum of 12 credits, in combination with other independent research credit hours. Pass-Fail only. Prereq: Psychology or Neuroscience major and permission of faculty research mentor. A signed contract between student and faculty member must be filed prior to enrollment in the course.

PSY 399 FIELD BASED/COMMUNITY BASED EDUCATION. (1-6)

A community-based or field-based experience in psychology, under the supervision of a faculty member. May be repeated to a maximum of 12 credits (if applicable). Pass-fail only. Prereq: Permission of faculty sponsor and department chair or director of advising; filing of a learning contract with department office; completion of 12 hours in psychology with an average GPA of 2.5 in psychology courses. PSY majors, juniors and seniors only.

PSY 424 HUMAN SENSES AND PERCEPTION. (3)

A study of the stimulus, receptor and organism variables that underlie perceptual experience and perceptually based behavior with emphasis upon theory and experimental method. Prereq: PSY 100.

PSY 427 COGNITIVE PROCESSES. (4)

A general introduction to cognitive psychology through lecture and lab. Emphasis is placed on theory and research in information processing, memory, decision-making, language and the means by which cognitive psychology is applied to our lives. The lab is designed to provide an opportunity for individualized experience with research equipment and methodology in cognitive psychology. Lecture, three hours per week; laboratory, two hours per week. Prereq: Declared major in Psychology, PSY 195, PSY 215, 216, and 311. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

PSY 430 RESEARCH IN PERSONALITY. (4)

A lecture-lab course intended to introduce students to the field of contemporary personality psychology. Includes a survey of the methods used and issues examined by current personality psychologists. Lectures will focus on selected current theories and issues, whereas labs will involve an in-depth examination of scale construction and the correlational approach to research. Lecture/discussion, three hours per week; laboratory, two hours per week. Prereq: Declared major, PSY 195, PSY 215, 216, and PSY 313. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

PSY 440 RESEARCH IN SOCIAL PSYCHOLOGY. (4)

An advanced course in research methods in social psychology. Emphasis will be placed on learning and applying experimental and nonexperimental methods to social psychological issues. In the laboratory component, students will design, conduct, and write up their own social psychological study. Lecture/discussion, three hours per week; laboratory, two hours per week. Prereq: Declared major in Psychology, PSY 195, PSY 215, 216, and 314. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

PSY 450 LEARNING. (4)

The contemporary theoretical and empirical bases of conditioning and learning in humans and nonhumans will be studied through an integration of lectures and intensive, hands-on laboratory experiences. Lecture, three hours per week; laboratory, two hours per week. Prereq: Declared major in psychology, PSY 195, PSY 215, 216, and 311. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

PSY 456 BEHAVIORAL NEUROSCIENCE. (4)

An intensive investigation of the neural basis of behavior using an integrated lecture and laboratory format. Principles of neuroanatomy, neurophysiology and neuropharmacology are applied to behavioral processes such as perception, movement, learning, motivation and emotion. Lecture, three hours per week; laboratory, two hours per week. Prereq: Declared major in Psychology, PSY 195, PSY 215, 216, 312, BIO 103, or consent of instructor. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

PSY 459 NEUROPHARMACOLOGY: DRUGS AND BEHAVIOR. (3)

Examination of the general principles of drug action, including pharmacokinetic and pharmacodynamic considerations, emphasizing the effects of recreational and psychotropic drugs (including plant-derived and synthetic drugs) on signaling in major neurotransmitter systems. Includes discussion of selected issues such as sex differences, developmental toxicity and medication development. Prereq: PSY 215 and PSY 312, or BIO 148 or equivalent.

PSY 460 PROCESSES OF PSYCHOLOGICAL DEVELOPMENT. (4)

A systematic examination of the major theoretical issues and the logic and methods of the scientific study of developmental psychology. The course is organized around theoretical perspectives that have directed the study of developmental processes. In the laboratory component, students will engage in demonstration exercises designed to illustrate selected topics and research techniques. Students will be required to design and implement a research project. Lecture/discussion, three hours per week; laboratory, two hours per week. Prereq: Declared major in Psychology, PSY 195, PSY 215, 216, and 223. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

PSY 495 SENIOR THESIS SEMINAR. (4)

This course focus will be on the development and presentation of a research question, and the design of an experimental test of the question. The course will use a seminar format. Students will be expected to give both an oral and written presentation of their research proposal and to participate in the discussion of the proposals of other students. Prereq: Major in psychology, senior status, research sponsor, approval of instructor.

PSY 496 SENIOR THESIS RESEARCH. (4)

This course focus will be on the oral and written presentation of research results. The course will use a seminar format. Students will complete their thesis research, prepare a written report, and present it to the seminar. Prereq: PSY 495.

PSY 499 SENIOR INTERNSHIP IN PSYCHOLOGY. (3)

Designed as a senior-capstone course for psychology majors to integrate classroom learning, theory, and practice in the context of a research or field-based experience in psychology under the supervision of a psychology faculty member. Students spend nine hours weekly in the placement site and meet weekly as a group with the course instructor to discuss placements, readings, and writing assignments. Prereq: Declared major in Psychology, seniors only; consent of instructor; contract with department; faculty supervision; and completion of one of the following: PSY 427, 430, 440, 450, 456, 460, or 552.

PSY 500 HISTORY AND SYSTEMS OF PSYCHOLOGY. (3)

The course reviews the historical context, influences, and individuals instrumental in the development of psychological research, theories, and systems. Readings and discussions of original sources and contemporary research are emphasized. Prereq: Completion of one of the following: PSY 427, 430, 440, 450, 456, 460, or 552.

PSY 534 CHILD PSYCHOPATHOLOGY. (3)

The course is designed to cover issues in the classification, assessment, and treatment of the major childhood behavior disorders, including attention deficit and conduct disorders, learning

disabilities, depression, and child abuse. In addition, issues relating to parent-child relations, divorce, and children's attributions will be covered. Prereq: Completion of one of the following: PSY 427, 430, 440, 450, 456, 460, or 552.

PSY 535 PSYCHOLOGICAL TESTING. (3)

A general orientation to the field of psychological testing. Introduction to the principles and methods of psychological testing, and a survey of the various kinds of psychological tests. Prereq: Completion of one of the following: PSY 427, 430, 440, 450, 456, 460, or 552.

PSY 552 EVOLUTIONARY PSYCHOLOGY. (4)

The course deals with sociobiology, the evolutionary basis of behavior. It examines a range of behavior from responses that are genetically predisposed to the highly flexible conceptual behavior shown by humans, including the origins of belief systems. A required laboratory component consists of applications of techniques used to study flexible animal behavior. Students will learn to train an animal to perform several tasks including a stimulus discrimination. Prereq: Declared major in Psychology, PSY 195, PSY 215, 216, 311, or consent of instructor. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

PSY 561 ADVANCED TOPICS IN FOUNDATIONS OF CLINICAL PSYCHOLOGY (Subtitle required). (3)

Selected topics in clinical psychology such as health psychology and introduction to clinical psychology. Course topics will vary from year to year, providing students with a diversity of material in the area of clinical psychology. May be repeated to a maximum of six credits. Prereq: Completion of one of the following: PSY 427, 430, 440, 450, 456, 460, or 552.

PSY 562 ADVANCED TOPICS IN COGNITIVE PSYCHOLOGY (Subtitle required). (3)

This course is designed to provide in-depth study of a specialized topic within cognitive psychology. Topics will vary from year to year and may include: theories of memory; theories of reading; cognition and emotion; connectionist modeling; engineering and environmental psychology. May be repeated to a maximum of six credits. Prereq: Completion of one of the following: PSY 427, 430, 440, 450, 456, 460, or 552.

PSY 563 ADVANCED TOPICS IN DEVELOPMENTAL PSYCHOLOGY (Subtitle required). (3)

This course is designed to provide in-depth study of a specialized topic in developmental psychology. Topics will vary from year to year and may include: cognitive development; development of memory and attention; development of reasoning and problem solving; and media use and children's development. May be repeated to a maximum of six credits. Prereq: Completion of one of the following: PSY 427, 430, 440, 450, 456, 460, or 552.

PSY 564 ADVANCED TOPICS IN LEARNING (Subtitle required). (3)

The course will provide in-depth study of specialized topics in the area of higher learning in animals. Topics will vary from year to year and may include concept learning, memory, imitation, language, and cooperation. The course will also examine these processes from the perspective of sociobiology. May be repeated to a maximum of six credits. Prereq: Completion of one of the following: PSY 427, 430, 440, 450, 456, 460, or 552.

PSY 565 ADVANCED TOPICS IN NEUROSCIENCE (Subtitle required). (3)

Advanced coverage of recent research within the field of behavioral neuroscience. The course will provide in-depth coverage of one topic, such as developmental psychobiology, neurobiology of learning and memory, or the biological basis of reward. May be repeated to a maximum of six credits. Prereq: Completion of one of the following: PSY 427, 430, 440, 450, 456, 460, or 552.

PSY 566 ADVANCED TOPICS IN SOCIAL PSYCHOLOGY (Subtitle required). (3)

Selected topics exploring aspects of social psychology. The content of the course will vary from year to year, focusing on topics such as social cognition, the self, cross-cultural psychology, personal relationships, consumer and organizational psychology, and nonverbal communication. Class format will be determined by the instructor, with some years having a small seminar structure and other years having a more traditional lecture format. May be repeated to a maximum of six credits. Prereq: Completion of one of the following: PSY 427, 430, 440, 450, 456, 460, or 552.

PSY 603 PSYCHOPATHOLOGY. (3)

An examination of the descriptive, theoretical, and research material relevant to the major classes of disturbed behavior. Special attention is devoted to the stylistic features of neurotic and psychotic communication and behavior. Prereq: Enrollment in the graduate program in clinical psychology.

PSY 610 PSYCHOMETRICS. (3)

Analysis and interpretation of human measurements. The course deals with the application of basic inferential procedures to the analysis and interpretation of psychological data. Required of all graduate students in psychology. Prereq: A course in statistics.

PSY 611 PSYCHOLOGICAL RESEARCH. (3)

The course deals with the design of psychological experiments. Emphasis is upon issues concerning choice of appropriate designs for psychological research. Both experimental and correlational research designs are studied. Required of all graduate students in psychology. Prereq: PSY 610 or permission of instructor.

Course Descriptions

PSY 616 RESEARCH DESIGN IN CLINICAL PSYCHOLOGY. (3)

Concentrates on current methodologies utilized in clinical research and on the application of sophisticated techniques to traditional research problems. Students are expected to master critical skills for the evaluation of research designs and are encouraged to explore creative approaches to research in important clinical areas. Prereq: Enrollment in the graduate program in clinical psychology.

PSY 620 PROSEMINAR IN HISTORY AND SYSTEMS OF PSYCHOLOGY. (3)

A study of the philosophical precursors and scientific traditions of psychology. The schools of 19th and 20th century psychology are surveyed as are the major theoretical positions and content areas of contemporary psychology. Prereq: Graduate standing in Department of Psychology or Department of Educational and Counseling Psychology. (Same as EDP 615.)

PSY 621 PROSEMINAR IN LEARNING. (3)

An intensive treatment of concepts, methodology, and current developments in the field of learning.

PSY 622 PROSEMINAR IN PERSONALITY. (3)

An intensive treatment of theories, methods of investigation and current developments in the area of personality. Prereq: Enrollment in graduate program in Psychology or consent of instructor.

PSY 623 PROSEMINAR IN SENSATION AND PERCEPTION. (3)

An intensive examination of the facts, methods and concepts involved in the study of sensory and perceptual processes. Prereq: Consent of instructor.

PSY 624 PROSEMINAR IN SOCIAL PSYCHOLOGY. (3)

An intensive examination of the methods and data of social psychology with emphasis on social attitudes. Prereq: PSY 344 or 314 or equivalent.

PSY 625 PROSEMINAR IN DEVELOPMENTAL PSYCHOLOGY. (3)

An intensive treatment of theoretical and experimental literature, both classical and contemporary, in developmental psychology. Prereq: Admission to the graduate program in psychology or consent of instructor.

PSY 626 SURVEY OF HEALTH PSYCHOLOGY. (3)

A survey of the field of health psychology. It will explore the ways in which social and psychological research contribute to an understanding of health and illness behavior. Prereq: Graduate or professional standing and consent of instructor. (Same as BSC 626.)

PSY 627 PROSEMINAR IN PHYSIOLOGICAL PSYCHOLOGY. (3)

An intensive examination of theories, methods of investigation, and current developments in the field of physiological psychology. Prereq: Graduate standing or permission of instructor. (Same as PGY 627.)

PSY 628 PROSEMINAR IN COGNITIVE PROCESSES. (3)

An intensive examination of theoretical and empirical evidence concerning mental processes in the adult human, including attention, memory, language, and problem-solving. Prereq: Graduate standing in psychology, or consent of instructor.

PSY 629 INTRODUCTION TO CLINICAL PSYCHOLOGY. (2)

Offered conjointly by the clinical faculty; covers the broad perspectives of clinical psychology, methods, history, ethics, and professional issues. Prereq: Enrollment in the graduate program in psychology.

PSY 630 CLINICAL METHODOLOGY I. (2)

An intensive survey and evaluation of tests of intelligence and objective methods of assessment of normal and abnormal personality. Special emphasis is given to major theoretical issues and relevant quantitative methods. Prereq: Enrollment in the graduate program in Clinical Psychology.

PSY 631 PRACTICUM IN CLINICAL METHODOLOGY I. (2)

Clinical interviewing and practice in writing reports on behavioral observations, content of verbalization, and case history data. Practice in administration, scoring and interpretation of intelligence tests and objective personality tests. Laboratory, four hours. Prereq: Enrollment in graduate program in Clinical Psychology and prior or concurrent enrollment in PSY 630.

PSY 632 CLINICAL METHODOLOGY II. (2)

Theoretical issues, quantitative methods and research findings on the projective methods of assessment of normal and abnormal personality. Prereq: PSY 630, and enrollment in graduate program in psychology.

PSY 633 PRACTICUM IN CLINICAL METHODOLOGY II. (2)

Practice in the administration and scoring of projective techniques and batteries of clinical tests. Laboratory, four hours. Prereq: PSY 630 and 631, and enrollment in graduate program in clinical psychology. Prereq or concur: PSY 632.

PSY 636 SYSTEMS OF PSYCHOTHERAPY. (3)

An intensive examination of the major theoretical and research approaches to therapeutic behavior change. Prereq: PSY 632 and 633, and enrollment in graduate program in clinical psychology.

PSY 637 PRACTICUM IN PSYCHOLOGICAL ASSESSMENT AND INTERVENTION. (1-3)

Supervised experience in the techniques of psychological assessment and intervention with

adults, children, families, and groups. Laboratory, two to six hours per week. May be repeated up to sixteen hours. Prereq: PSY 636 and enrollment in graduate program in clinical psychology.

PSY 638 DEVELOPMENTAL NEUROBIOLOGY. (3)

An explanation of the processes which contribute to the development of the nervous system. Neurophysiological, cell biological and molecular approaches to cell differentiation, neuronal pathfinding and synapse formation and stabilization will be explored and discussed. Examples will be drawn from both vertebrate and invertebrate preparations. Prereq: BIO 535 or consent of instructor. (Same as ANA/BIO/PGY 638.)

PSY 639 PRACTICUM IN PSYCHOLOGICAL ASSESSMENT AND INTERVENTION SUMMER WORK. (0)

Supervised experience in the techniques of psychological assessment and intervention with adults, children, families, couples and/or groups that occurs during the summer, i.e., outside of the academic year (Fall/Spring semesters). This course does not fulfill one of the program requirements for group supervision but it does meet legal and ethical requirements for supervision during practicum training. May be repeated. Prereq: PSY 636 and enrollment in graduate program in clinical psychology.

PSY 708 INTERNSHIP IN CLINICAL PSYCHOLOGY. (0)

Full time practice in an APA-accredited internship setting, with on-site supervision provided by the internship setting and with academic supervision provided by the Director of Clinical Training at the University of Kentucky. May be repeated twice. Prereq: All course work in doctoral program in clinical psychology, approved dissertation proposal, and consent of Director of Clinical Training.

PSY 710 TOPICAL SEMINAR IN CLINICAL PSYCHOLOGY. (3)

A selected topics course designed to cover content areas which are not being met by the current faculty; may be taught by persons with special qualifications from the community or by existing faculty exploring new areas. The topics, which may be offered as the need arises, may include on a semester basis mental retardation, intensive psychoanalytic theory, psychopharmacology, etc. May be repeated to a maximum of six credits. Prereq: As specified by instructor.

PSY 766 TOPICAL SEMINAR IN BEHAVIORAL NEUROSCIENCE. (3)

A study of selected topics in behavioral neuroscience with emphasis on recent research and theory. May be repeated to a maximum of nine credits. Prereq: Consent of instructor. This course may be elected to fulfill requirements in the psychology and physiology graduate programs. (Same as PGY 767.)

PSY 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

PSY 772 TOPICAL SEMINAR IN LEARNING. (3)

The study of selected topics in the learning area with emphasis on the recent experimental and theoretical literature. May be repeated to a maximum of six credits. Prereq: Consent of instructor.

PSY 776 SEMINAR IN DEPENDENCY BEHAVIOR. (3)

The course is designed to explore theories of dependency behavior by examining the concept of dependency as it can be applied to the study of various phenomena including alcohol use and abuse; dependence on other psychoactive substances; institutional dependency; dependency in work settings; and poverty and welfare. Prereq: Consent of instructor. (Same as ANT/SOC/BSC 776.)

PSY 778 TOPICAL SEMINAR IN DEVELOPMENTAL PSYCHOLOGY. (3)

An advanced seminar in selected topics in human development, including cognition, learning, language, personality, socialization, life span issues, and developmental aspects of psychopathology. Prereq: PSY 625 and enrollment in graduate psychology program, or consent of instructor. May be repeated a maximum of six credits.

PSY 779 TOPICAL SEMINAR IN SOCIAL PSYCHOLOGY. (3)

Each semester some topic in the field of social psychology, such as attitudes and beliefs, structures and function of social groups, social determinants of behavior, leadership, and morale will be studied intensively. May be repeated to a maximum of six credits. (Same as SOC 779.)

PSY 780 PROBLEMS IN PSYCHOLOGY. (1-3)

This number is used for topical seminars taught on an experimental basis or covering special material that may not be presented again. May be repeated to a maximum of 12 hours credit.

PSY 781 RESEARCH PARTICIPATION. (1)

Emphasis on the team approach to research. Designed primarily for first year graduate students. May be repeated to a maximum of four credits. Laboratory, two to four hours. Prereq: Enrollment in the graduate program in psychology.

PSY 790 RESEARCH IN PSYCHOLOGY. (1-12)

A minimum of three hours per credit a week is required on research conducted in consultation with the instructor. May be repeated as necessary with the approval of the Director of Graduate Studies.

PT Physical Therapy

#PT 120 CAREERS IN PHYSICAL THERAPY. (1)

An overview of the Physical Therapy profession(s) including aspects of professional practice, areas of specialization, professional issues and trends, and career paths and opportunities. The course will consist of assignments, lectures and interactive discussions led by faculty and visiting professionals designed to expand students' understanding of the profession(s) and to assist in educational and career planning and discernment.

PT 603 PHARMACOLOGY I. (1)

Fundamental concepts of pharmacology and their impact on the physical therapy management of patients. This course focuses on the integration of basic science, research, and clinical intervention. Prereq: Admission to the Physical Therapy Professional program and successful completion of the spring and summer semesters in the first year.

PT 604 PHARMACOLOGY II. (1)

This course will build on the material covered in PT 603, Pharmacology I in Physical Therapy, focusing on how drug classes influence rehabilitation treatment strategies. Prereq: Successful completion of PT 603.

PT 605 WELLNESS AND SPORTS NUTRITION. (3)

Emphasis is directed toward nutrition as applied to prevention of disease through lifestyle management and the application of nutrition in exercise and sport. Targeted focus areas are: body composition and energy expenditure, the metabolic basis of weight management, nutrient needs throughout the lifecycle, the metabolic changes associated with obesity, behavioral management of obesity, nutrient metabolism and exercise, water and electrolyte balance during exercise, nutritional ergogenic aids, nutrition-strength and performance enhancement. Prereq: PGY 412G, and BCH 401G or equivalent or consent of instructor. (Same as CNU/NS 605.)

PT 628 GERONTOLOGY FOR PHYSICAL THERAPY STUDENTS. (2)

PT 628 will utilize biological aspects of aging as the foundation, and integrate psycho-social-spiritual characteristics associated with aging, health and function through the use of lectures, discussions, case studies, service learning, panel discussions and clinical experience. Students will work closely with older adults in terms of PT management for those with functional limitations and in health care promotion and prevention. Prereq: Admission to the Physical Therapy Professional program and successful completion of the first year.

PT 645 RESEARCH AND MEASUREMENT IN PHYSICAL THERAPY. (3)

An analysis of various procedures and measuring instruments used in clinical practice and research in physical therapy. Emphasis is placed on the theory, application, and interpretation of the measurements in the evaluation of published materials. Basic statistical techniques and their appropriate use will be presented. Prereq: Admission to the Physical Therapy professional program and to the Graduate School.

PT 650 DYSFUNCTION OF PERIPHERAL JOINTS. (3)

This course is an advanced approach to assessment and therapeutic management of musculoskeletal problems involving peripheral joints. Lecture, two hours; laboratory, two hours per week. Prereq: Consent of instructor.

PT 651 DYSFUNCTION OF VERTEBRAL JOINTS. (3)

This course concentrates on advanced theories and techniques of assessment and therapeutic management of musculoskeletal problems of the back. Lecture, two hours; laboratory, two hours per week. Prereq: Consent of instructor.

PT 652 PATHOMECHANICS. (3)

An application and research oriented investigation into the science of abnormal human movement. The course involves the pathologic aspects of neural control, muscle contraction, assessment and motion analysis, joint mechanics, and noncontractile tissue as they relate to human movement and kinetics. Lecture, two hours; laboratory, two hours per week. Prereq: HPR 515 or consent of instructor.

PT 654 MOTOR CONTROL THEORY AND INTERVENTION. (4)

This course explores current knowledge regarding the neurophysiological mechanisms involved in motor control from birth to adulthood. The course also explore a variety of therapeutic interventions with motor control as a foundation. Prereq: Admission to the PT professional program or consent of the instructor.

PT 655 NEUROMOTOR DEVELOPMENT. (3)

This is an advanced course on normal neuromotor development and the deviations from normal with emphasis on the infant. Prereq: Consent of instructor.

PT 668 RESEARCH TOPICS IN PHYSICAL THERAPY: ANALYSIS. (1-3)

This course is intended to introduce the student to methods of analyzing data and problems of writing a scientific paper for publication. Students will analyze data they have collected as it relates to their research problems. Their written manuscripts will be due at the end of this course. May be repeated to a maximum of three credits. Prereq: Admission to the Physical Therapy professional program and successful completion of the first year or permission of the instructor.

PT 669 RESEARCH TOPICS IN PHYSICAL THERAPY: OUTCOMES. (1-3)

This course is intended to introduce students to the process of turning a finished research

manuscript into an oral research presentation. Students will be responsible for audiovisuals, handouts, and any other methods used to make their presentations. In addition to faculty advisor input and grading, students will critique their own presentations and gain experience in critique of other professional research presentations. May be repeated to a maximum of three credits. Prereq: Admission to the Physical Therapy professional program and successful completion of the second year or permission of the instructor.

PT 676 ELECTROPHYSIOLOGICAL TESTING AND THERAPEUTICS. (1-3)

The student is introduced to the principles of electricity, how it affects the muscle and nerve, its use in physical therapy for patient assessment and management, and its safety aspects. Lectures and laboratory exercises are included. Students in the professional program will enroll for at least one credit in the first year of the professional program and at least one credit in the second year of the professional program. May be repeated to a maximum of three credits. Prereq: Admission to the Physical Therapy Professional program and successful completion of the first two semesters of the program.

PT 686 SPECIALTY ELECTIVES. (1-4)

Introduction to emerging specialty areas within the physical therapy profession. Students will select multiple specialty areas under faculty direction. Course may be repeated to a maximum of 4 credit hours. Prereq: Admission to the Physical Therapy Professional program and active enrollment in the first semester of the professional curriculum or beyond or consent of the instructor.

PT 695 INDEPENDENT STUDY IN PHYSICAL THERAPY. (1-3)

Independent work devoted to specific problems or area of interest in physical therapy. Work to be supervised by a graduate faculty member proficient in the area under study. May be repeated to a maximum of six credits. Prereq: Consent of instructor.

PT 705 SKELETAL MUSCLE PHYSIOLOGY AND ADAPTABILITY. (3)

This course is designed to present a broad series of topics central to the understanding of human skeletal muscle physiology and therapeutic interventions. Course emphases will include muscle physiology rather than anatomic factors enabling the clinical implications of the dynamic alterable nature of muscle to be central. Included in these implications are aging, disease and injury processes, and therapeutic interventions/strategies. Prereq: Admission to the graduate program in Physical Therapy, or the Rehabilitation Sciences Ph.D. program or consent of instructor.

PT 770 SEMINAR IN PHYSICAL THERAPY PUBLIC HEALTH AND WELLNESS ISSUES. (2)

Each semester a contemporary topic in the field of physical therapy will be studied intensively. Lecture, two to three hours per week; laboratory, zero to two hours per week. May be repeated to a maximum of nine credits.

PT 804 BEHAVIORAL FACTORS IN HEALTH AND DISEASE ACROSS THE LIFESPAN. (3)

This course studies human behavior relating to health and disease and the organization of health care as a social system. Selected psychological and social science concepts are presented in a biobehavioral frame of reference across the lifespan and are applied to the consideration of specific problems in physical therapy. Prereq: Admission into the Professional Physical Therapy program.

PT 805 NORMAL FUNCTIONAL ANATOMY. (3)

A regional study of the normal functional aspects of the neuromusculoskeletal systems, including the basic principles of biomechanics and human locomotion. This course runs during the entire 12-week summer term. Prereq: Admission to the Physical Therapy professional program and successful completion of the spring semester (first year of the professional program).

PT 814 FOUNDATIONAL SKILLS. (2)

A course that lays the foundation for specific physical therapy procedures, basic to the delivery of care and professional development. Prereq: Admission to the Physical Therapy education program and consent of the instructor.

PT 815 BASIC CLINIC SKILLS. (3)

Theory, techniques, rationale, physiological effects, and indications of basic physical therapeutic procedures of hydrotherapy, thermal therapy, cryotherapy, muscle testing and goniometry evaluations, gait analysis, muscle function are presented in lecture. Techniques are demonstrated and practiced in laboratory. Prereq: Admission to the Physical Therapy professional program and successful completion of the spring semester (first year of the professional program).

PT 821 MANAGEMENT OF VASCULAR AND INTEGUMENTARY DISORDERS. (2)

The theoretic and clinical framework for physical therapy assessment and management of patients with disorders of the vascular and integumentary system, (i.e., open wounds, burns, etc.) are discussed. The student will utilize a problem solving approach to select, implement tests and measurements as well as therapeutic interventions. Prereq: Admission to the Physical Therapy professional program and successful completion of the first year.

PT 825 PROSTHETICS. (2)

This course will prepare the student to perform physical therapy evaluation and provide patient management as part of a prosthetic team. Lecture, 18 hours; laboratory, 34 hours. Prereq: Admission to the Physical Therapy professional program and successful completion of the first year.

PT 826 ORTHOTICS. (2)

This course will prepare the student to perform the physical therapy evaluation and provide patient management as part of a prosthetic or orthotic team. Lecture, 18 hours; laboratory, 30 hours. Prereq: Admission to the Physical Therapy professional program and successful completion of the first year.

PT 827 SPINAL CORD INJURY. (2)

This course will apply material and techniques from prior classes to the acute and chronic treatment of the spinal cord injured individual. Use of evaluation skills, body mechanics, knowledge of anatomy and physiology and program planning will play major roles in the course. In addition, you will be encouraged to view the patient as a whole. Experiences will include patient demonstrations, videotapes, and personal experiences that will help you appreciate the lifestyle change that is inevitable after a severe injury. Prereq: Admission to the Physical Therapy professional program and successful completion of the first year.

PT 830 DIAGNOSTIC IMAGING, SCREENING AND INSTRUMENTATION. (2)

This course presents diagnostic screening processes utilized in PT. Included are the applications of results from specialized imaging instrumentation. Prereq: Successful completion of the previous second year courses in physical therapy.

PT 831 CLINICAL NEUROPHYSIOLOGY. (2)

The study of the regional organization of the brain and spinal cord, the ways in which they connect and how these connectivities influence human behavior with emphasis on motor behavior. The effect of disease states on normal brain and spinal cord function will be discussed. Prereq: Admission to the Physical Therapy professional program and successful completion of the spring and summer semesters in the first year.

PT 834 INTRODUCTION TO PHYSICAL THERAPY AND BIOETHICS. (3)

An orientation to the profession of physical therapy including history, professional organization, role in health care, elementary patient care skills, use of the medical library and professional documentation. Bioethics will be introduced in relationship to moral issues in health care. Prereq: Admission to the Physical Therapy professional program.

PT 835 PHYSICAL THERAPY INTEGRATED CLINICAL I. (1)

The student receives campus based clinical and classroom preparation for clinical experience. The student then observes patient treatment by experienced staff members and is supervised in the performance of elementary procedures involved in patient care. Offered on a pass/fail basis only. Prereq: Admission to the Physical Therapy professional program and successful completion of the first two semesters of the professional program.

PT 836 PHYSICAL THERAPY INTEGRATED CLINICAL II. (3)

Through an integrated model of classroom and clinical activities, students progress from performance of basic skills under close supervision to performance of those skills with more independence and adding more opportunities for evaluation and treatment experiences. Offered on a pass/fail basis only. Prereq: Admission to the Physical Therapy professional program and successful completion of the first three semesters of the professional program.

PT 837 PHYSICAL THERAPY INTERNSHIP I. (9)

This course is the first clinical internship. Students remain under supervision of clinical instructors but have increasing independence in evaluation, examination, treatment and discharge planning in a variety of clinical settings at selected sites. Offered on a pass/fail basis only. Prereq: Admission to the Physical Therapy professional program and successful completion of the first six semesters of the professional program.

PT 838 PHYSICAL THERAPY INTERNSHIP II. (9)

This course is the second clinical internship. Structure is similar to PT 837 but students continue to increase their repertoire of clinical skills and meet higher passing standards while receiving two additional weeks of clinical experience. Students will continue to perform physical therapy evaluation, examination, treatment and discharge. Offered on a pass/fail basis only. Prereq: Admission to the Physical Therapy professional program and successful completion of the first two years of the professional program.

PT 839 PHYSICAL THERAPY INTERNSHIP III. (9)

This course is the third of four clinical internships. Structure is similar to previous internships but students continue to increase their repertoire of clinical skills. Students are expected to perform as entry level physical therapist by the end of the internship. Students are placed in appropriate sites throughout the Commonwealth and the United States. International experiences are available for selected students. Offered on a pass/fail basis only. Prereq: Admission to the Physical Therapy professional program and successful completion of the first two years of the professional program.

PT 840 PHYSICAL THERAPY INTERNSHIP IV. (12)

This course is the final course of four clinical internships. Structure is similar to previous internships. Students continue to increase their repertoire of clinical skills over 12 weeks. Students are expected to perform as entry level physical therapists by the end of the internship. Students are placed in appropriate sites throughout the Commonwealth and the United States. International experiences are available for selected students. Offered on a pass/fail basis only. Prereq: All program course work preceding this in the professional doctorate program.

PT 846 MEDICAL AND PHYSICAL THERAPY MANAGEMENT OF ORTHOPEDIC PROBLEMS. (3)

An introduction to medical procedures, including history, physical exam, laboratory data, radiographic film and medical and physical therapy management of orthopedic problems,

including fractures, soft tissue injuries, scoliosis, joint replacements, muscle transplants and tendon repairs, will be presented. Prereq: Admission to the Physical Therapy professional program and successful completion of the first year.

PT 847 MANAGEMENT OF NEUROLOGICAL SYSTEMS I. (3)

Medical and physical therapy management of neurological problems, including the neurological examination, seizures, degenerative and neurological diseases, will be presented. Lecture/laboratory, patient contact, and case study formats will be used. Lecture, two hours; laboratory, two hours. Prereq: Admission to the Physical Therapy professional program and successful completion of the first year.

PT 850 ADVANCED MANUAL INTERVENTIONS. (3)

A combined lecture and lab series focusing on advanced manual interventions, their indications, contraindication, anticipated goals and expected outcomes. Topics will include spinal mobilization and manipulation, manual lymph drainage, soft tissue, neural tissue and connective tissue mobilization along with current topics introduced through advancement of knowledge in the profession. Prereq: Admission to the PT program and successful completion of the second year or the consent of the instructor.

PT 854 PATHOLOGY AND CLINICAL APPLICATION. (4)

PT 854 is a medical pathology course where major diseases and conditions of the body's organs are presented in terms of definition, etiology, pathogenesis, clinical presentation, prognosis and intervention. Prereq: Admission to the Physical Therapy professional program.

PT 856 THERAPEUTIC EXERCISE I. (2)

This introductory course provides an overview of therapeutic exercise and its relation to patient management, and development of skill in basic therapeutic exercise approaches for improving muscle performance, relaxation and mobilization. Lecture and laboratory sessions are included. This course runs during the entire 12-week summer term. Prereq: Admission to the Physical Therapy professional program and successful completion of the spring semester in the first year.

PT 860 DIAGNOSIS AND MANAGEMENT OF COMPLEX PATIENTS. (3)

Lecture and case-based small group discussion of patients who have complex management needs in the biomedical, physical, psychosocial, and/or spiritual realms. Prereq: Successful completion of all prior course work in the PT program.

PT 867 RESEARCH TOPICS: DESIGN. (1)

This course will focus on designing a hypothesis-driven and/or goal oriented research project in the area of Physical Therapy. This will include determining the research area and question, choosing the correct research design for the research question, assessing the feasibility of the proposed project, gaining knowledge and experience in writing a research proposal, and estimating the potential outcomes of a project. This course will re-emphasize, build upon, and apply knowledge and skills acquired in PT 645 (Research Design and Measurement). This course will also enable the student to write a comprehensive research or project proposal for implementation. While students are given flexibility (based on advisor input) to design a project, all projects are expected to incorporate outcomes measurements. Prereq: Admission to the Physical Therapy program, successful completion of PT 645 or permission of the course instructor.

PT 877 CARDIOPULMONARY PHYSICAL THERAPY. (3)

A combined lecture, laboratory series about the theoretical and practical foundations necessary for entry-level physical therapists to conduct examinations and interventions for individuals with primary or secondary cardiac and/or pulmonary dysfunction. Case studies, demonstrations and laboratory experiences are used to help the student. Prereq: Students must have successfully completed the first year of program.

PT 887 INTRODUCTION TO PHYSICAL THERAPY MANAGEMENT. (1)

An introduction to basic management techniques including purpose, goals and objectives; contracts, task statement and analysis; position descriptions; medicare; quality assurance; placement services. This course runs during the entire 12-week summer term. Prereq: Admission to the Physical Therapy professional program and successful completion of the first year.

PT 888 ADVANCED PHYSICAL THERAPY MANAGEMENT. (3)

Emphasis is placed on operational aspects of physical therapy department including relationship to total facility operation, designing and equipping a department, contracts, salaries, fees, personnel policies, records, data processing, budget process, medical-legal implication, continuing education, and the consultative process. Prereq: PT 887 or consent of instructor.

PT 890 PROFESSIONAL SEMINAR. (1)

This course will provide a framework for preparation and completion of the comprehensive examination upon fulfillment of all other requirements for graduation from the physical therapy doctoral program. Students will be guided toward information that will increase their effectiveness in preparing for the exam which in turn provides an effective foundation for completion of professional certification after graduation from this program. Prereq: Admission to the Physical Therapy program, completion of all course requirements in the program or permission of the course instructor.

PT 902 INTEGRATION OF EVIDENCE BASED PRACTICE. (3)

This course is designed to provide the participant with knowledge and hands-on experience in the integration of an evidence-based approach into practice. Students will learn how to critically review the literature and will acquire skills to integrate evidence into practice. Prereq:

Admission to transitional DPT track and completion of a CAPTE accredited professional – entry level physical therapy program and successful achievement of licensure. Applicants will be required to have completed a minimum of 9 months of clinical activity as a professional physical therapist.

PT 904 HEALTH PROMOTION AND DISEASE PREVENTION. (2)

This 2 credit course is designed to increase the depth and breadth of the practitioner's knowledge regarding health promotion, wellness and disease prevention, particularly as it is appropriate within the scope of PT practice. Utilizing valid theoretical constructs for behavioral change, the course will focus on clinical application and program design for effective promotion of health, wellness, and disease prevention for the individual and for the community. Prereq: Admission to transitional DPT track and completion of a CAPTE accredited professional – entry level physical therapy program and successful achievement of licensure. Applicants will be required to have completed a minimum of 9 months of clinical activity as a professional physical therapist and PT 902.

PT 906 ADVANCED PHYSICAL THERAPY DIAGNOSIS AND SCREENING. (2)

This course is designed to provide the PT practitioner with increased expertise in analysis and interpretation of multidisciplinary tests, measures, and screens in order to enhance PT diagnosis and screening skills. Instrumentation related to imaging techniques such as radiology, magnetic resonance, PET scans, and ultrasound will be addressed. In addition, specific foci will include nerve conduction velocity examination, as well as the use of the computer enhanced equipment (e.g. Biodex, Cybex, BTE, Neurocom) for assessing strength, endurance, balance and function. Prereq: Admission to transitional DPT track and completion of a CAPTE accredited professional – entry level physical therapy program and successful achievement of licensure. Applicants will be required to have completed a minimum of 9 months of clinical activity as a professional physical therapist and PT 902.

PT 908 CLINICAL DECISION MAKING FOR PATIENTS WITH COMPLEX PROBLEMS I. (3)

This course is designed to enhance the diagnosis and management skills of PT practitioners in providing care to individuals with complex problems related to chronic illness and/or neuromuscular pathology. This includes deepening practitioners' knowledge base regarding pathology and clinical application, as well as enhancing their understanding regarding biopsychosocial-spiritual aspects of coping and adaptation as experienced by patients with multiple diagnoses and problems. Foundational material related to pharmacology, reimbursement, care environments, and cardiopulmonary pathology and management will be presented. Prereq: Admission to transitional DPT track and completion of a CAPTE accredited professional – entry level physical therapy program and successful achievement of licensure. Applicants will be required to have completed a minimum of 9 months of clinical activity as a professional physical therapist and PT 902.

PT 910 CLINICAL DECISION MAKING FOR PATIENTS WITH COMPLEX PROBLEMS II. (2)

This course is designed to enhance the diagnosis and management skills of PT practitioners in providing care to individuals with complex problems related to acute illness and/or musculoskeletal pathology. This includes deepening practitioners' knowledge base regarding pathology and clinical application, as well as enhancing their understanding regarding biopsychosocial-spiritual aspects of coping and adaptation as experienced by patients with multiple diagnoses and problems. Material foundational to this course is presented in PT 908. The two courses are linked, taught in modular format sequentially. Prereq: Admission to transitional DPT track and completion of a CAPTE accredited professional – entry level physical therapy program and successful achievement of licensure. Applicants will be required to have completed a minimum of 9 months of clinical activity as a professional physical therapist and PT 902 and 908.

PT 912 ADVANCED ELECTIVES. (2)

This course is designed to allow the student to select an area of special interest for focus and investigation. The course work is designed to allow acquisition of knowledge and skill at an advanced level. Students will choose one specialty area out of a selection of elective topics for their in-depth study. Topics for advanced electives may vary each year based on student interest and faculty expertise. Prereq: Admission to the transitional DPT track or permission of the instructor.

RAS Radiation Sciences

RAS 472G INTERACTION OF RADIATION WITH MATTER. (3)

Basic aspects of the interaction of ionizing radiation with matter. Bohr atom, atomic spectra, radioactivity, energetics of decay. Sources of radiation, penetration of charged particles, electromagnetic radiation, and neutrons through matter; excitation and ionization processes; selected nuclear reactions; basic radiation detection and dosimetry. Prereq: PHY 213 or 232; MA 114 (may be taken concurrently); or equivalent. (Same as PHY/RM 472G.)

RAS 545 RADIATION HAZARDS AND PROTECTION. (3)

An analysis of common radiation hazards encountered in medicine, research, industry, and the environment. Regulations and procedures for the safe use of ionizing and nonionizing radiations. Lecture, two hours; laboratory, two and one-half hours. Prereq: PHY/RM 472G or consent of instructor. (Same as PHY/RM 545.)

RAS 546 GENERAL MEDICAL RADIOLOGICAL PHYSICS. (3)

The uses and dosimetric aspects of radiation in medicine will be analyzed, including many basic applications in the fields of diagnostic radiology physics, therapy physics, and nuclear medical physics. Prereq or concur: RM/PHY 472G or consent of instructor. (Same as PHY/RM 546.)

RAS 601 ADVANCED RADIATION DOSIMETRY. (2)

Advanced aspects of the interaction of radiation with matter and specialized topics in the dosimetry of ionizing radiations. Modifications of Bragg-Gray theory for application to megavoltage sources. Beta dosimetry. Specialized calibration techniques. Relative response functions of various media. Nontraditional techniques. Dosimetry of radiation fields including complex spectra. Prereq: PHY 472G, RM 546, or equivalent. (Same as RM 601.)

RAS 647 PHYSICS OF DIAGNOSTIC IMAGING I. (3)

Specialized and advanced topics in diagnostic imaging, including modulation transfer function analysis, image processing algorithms, acceptance testing, CT, NMR, ultrasound, etc. Prereq: PHY/RM/RAS 546 or consent of instructor. (Same as RM 647.)

RAS 648 PHYSICS OF DIAGNOSTIC IMAGING II. (3)

A continuation of RAS/RM 647. Specialized and advanced topics in nuclear medicine imaging physics, including positron emission tomographic procedures, emerging new modalities, and quality control. Prereq: RM/RAS 647 or consent of instructor. (Same as RM 648.)

RAS 649 PHYSICS OF RADIATION THERAPY. (3)

Specialized external beam and brachytherapy treatment planning; advanced Bragg-Gray cavity applications, including N_{gas} and TG-21; calibration, acceptance testing, and quality control of therapy physics equipment. Prereq: RAS/RM/PHY 546 and RAS/RM 601, or consent of instructor. (Same as RM 649.)

RAS 650 PHYSICS OF RADIATION THERAPY II: BRACHYTHERAPY PHYSICS. (2)

A presentation of the full scope of use of implanted radiation sources for medical purposes. The course includes consideration of all aspects of brachytherapy dosimetry and treatment planning as well as modern and cutting-edge brachytherapy clinical practice. Characteristics of interstitial, intracavitary, and intraluminal implants, as well as remote afterloaders, are considered. Prereq: RAS/RM/PHY 546; RM/PHY 472G; RAS/RM 649 (may be co-requisite). (Same as RM 650.)

RAS 651 ADVANCED LABORATORY INDIAGNOSTIC IMAGING PHYSICS. (1-3)

Specialized experiments involving the use, calibration, and quality control of x-ray and other diagnostic imaging equipment, and the appropriate use of radiation detectors in diagnostic physics measurements. Laboratory, approximately 30 hours per credit. May be repeated to a maximum of three credits. Prereq: RM/PHY 472G, RAS/RM 546; and concurrent: RAS/RM 647, or equivalent, plus graduate standing in the radiation science program.

RAS 695 RESEARCH IN THE HEALTH-RELATED RADIATION SCIENCES. (1-4)

Independent directed research on theoretical and practical problems in the health-related radiation sciences. May be repeated to a maximum of eight credits. Prereq: Graduate standing in one of the radiation-related sciences, plus consent of instructor. (Same as RM 695.)

RAS 710 RADIATION SCIENCE SEMINAR (Subtitle required). (1)

Topics of current interest relating to radiation and its applications in the areas of radiological medical physics and health physics. May be repeated to a maximum of four credit hours with consent of instructor. Prereq: Graduate standing in a radiation-related science.

#RAS 711 RESEARCH METHODS IN MEDICAL PHYSICS. (1)

This course will introduce the student to, and give them practical experience in, writing research proposals, research reports and carrying out research work. The course will be jointly taught by various medical physics faculty and guest lecturers. Students will be asked to present their own work to be critiqued by the class. The goal is to give the student a hands-on experience of what is involved in doing funded clinical research on human subjects and getting it published in an academic journal. Prereq: Approval of instructor.

#RAS 767 DISSERTATION RESIDENCE CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

RAS 849 RADIATION SCIENCES PRACTICUM. (1-6)

Applied practicum experiences in the radiation sciences. Laboratory, 40 hours per week equals one credit hour. Prereq: Advanced graduate standing in the radiation sciences.

RBM Physical Medicine and Rehabilitation

RBM 815 FIRST-YEAR ELECTIVE, PHYSICAL MEDICINE AND REHABILITATION. (1-3)

With the advice and approval of his or her faculty adviser, the first-year student may choose approved electives offered by the Department of Physical Medicine and Rehabilitation. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the first-year curriculum. Pass-fail only. Prereq: Admission to first year, College of Medicine.

RBM 825 SECOND-YEAR ELECTIVE, REHABILITATION MEDICINE. (1-4)

The student will be assigned to a faculty member and will attend inpatient rounds and staff conferences on the Spinal Cord Injury, Brain Injury or Stroke units at Cardinal Hill Hospital.

Course Descriptions

Student will attend OT and PT Clinics with assigned patients; a brief discussion paper will be required on an assigned topic.

RBM 850 ACTING INTERNSHIP IN REHABILITATION MEDICINE. (1-6)

Acting internship in Rehabilitation Medicine. May be repeated to a maximum of eight credits. Prereq: Medicine and/or surgery clerkship.

RBM 851 OUTPATIENT REHABILITATION (PHYSICAL MEDICINE). (4)

An introduction to outpatient physical medicine and rehabilitation that encompasses primarily musculoskeletal disorders such as low back pain, chronic pain, sports medicine and amputee clinic. In addition, the medical student will be exposed to electrodiagnostic procedures and soft-tissue injection techniques. Students will be under direct supervision of a resident and an attending during clinic hours (8 a.m. - 5 p.m.) five days per week. Laboratory, 40 hours per week.

RBM 852 PEDIATRIC ORTHOPAEDIC REHABILITATION. (4)

An introduction to pediatric rehabilitation and pediatric orthopaedics with emphasis on the total care of children with chronic neuromuscular or orthopaedic diseases, including cerebral palsy, spina bifida, and juvenile rheumatoid arthritis. Other possibilities for clinical involvement include pediatric clinics in hip disease, foot and hand problems, spine disease and pediatric prosthetics. Students will be under the direct supervision of attendings from Rehabilitation Medicine, Pediatrics, and Orthopaedic Surgery. Laboratory, 40 hours per week.

RC Rehabilitation Counseling

#RC 510 ORIENTATION TO REHABILITATION RESOURCES. (3)

This course is intended to provide an overview of the breadth of agencies, programs, and services involved in the provision of rehabilitation services for persons with disabilities, including medical, educational, institutional, and community resources. An overview of the relationships among agencies, staffing patterns, funding sources, and professionals involved in providing services to individuals with disabilities is included.

RC 515 MEDICAL AND PSYCHOSOCIAL ASPECTS OF DISABILITIES. (3)

This course is designed to prepare rehabilitation and mental health counselors, social workers and students in related fields with a working knowledge of the medical and psychosocial aspects of disability and chronic illness, and to provide students with the knowledge and understanding necessary to function and serve effectively in rehabilitation counseling and related interdisciplinary, allied health, and mental health settings. Topic areas include: human body systems, medical terminology, medical, functional, environmental and psychosocial aspects of disabilities and chronic illness, professional ethics, assistive technology, diagnostic classification systems, psychopharmacology, functional capacity, and wellness and illness prevention concepts and strategies. Specific disabilities covered in this course include neurologic, hearing, vision, intellectual disabilities, developmental disabilities, autism and Asperger's, learning disabilities, attention deficit disorders, and substance abuse. Prereq: College level courses in biology and psychology or consent of instructor. (Same as SW 515.)

RC 516 MEDICAL AND PSYCHOSOCIAL ASPECTS OF DISABILITIES II. (3)

This course is designed to prepare rehabilitation and mental health counselors, social workers, and students in related fields with a working knowledge of the medical and psychosocial aspects of disability and chronic illness, and to provide students with the knowledge and understanding necessary to function and serve effectively in rehabilitation counseling and related interdisciplinary, allied health, and mental health settings. Topic areas include: human body systems, medical terminology, medical, functional, environmental and psychosocial aspects of disabilities and chronic illness, professional ethics, assistive technology, diagnostic classification systems, psychopharmacology, functional capacity, and wellness and illness prevention concepts and strategies. Specific disabilities covered during this semester include psychiatric and psychological impairments, endocrine, gastroenterology, cancer, burns and skin disorders, blood and the immune system, respiratory, kidney and renal function and musculoskeletal. Prereq: College level courses in biology and psychology or consent of instructor. (Same as SW 516.)

RC 520 PRINCIPLES OF CLINICAL REHABILITATION COUNSELING AND REHABILITATION COUNSELING IN MENTAL HEALTH. (3)

The course provides a comprehensive introduction to rehabilitation and clinical mental health counseling as a human service system in public and private organizations. Students will examine and analyze philosophical, historical, legislative and organizational structures; rehabilitation and related clinical mental health counseling programs; referral and service delivery systems; the rehabilitation counseling process; administration of rehabilitation clinical mental health counseling programs; and professional and ethical issues. Prereq: Twelve hours of social or behavioral science, or graduate standing, or consent of instructor.

RC 525 HUMAN GROWTH, DISABILITY, AND DEVELOPMENT ACROSS THE LIFESPAN. (3)

This course provides a comprehensive study of human growth and development in the context of rehabilitation and clinical mental health counseling. Students will review human development theories across the life span and their implications and applications with persons with disabilities. Issues to be addressed include physical, emotional, moral, and cognitive development and the interaction of development and disability; human sexuality and disability; spirituality and religious aspects; transition issues as they relate to family, school, employ-

ment, aging, and disability; social and learning needs of individuals across the life span, and ethical and legal issues impacting individuals and families related to adjustment and transition. Prereq: Admission to the Rehabilitation Counseling Program or consent of instructor.

RC 530 CULTURAL DIVERSITY IN REHABILITATION COUNSELING. (3)

This course is designed to assist students to develop an understanding of the implications of cultural and individual diversity including race/ethnicity, gender, disability, age, class, spirituality and religion, geographic region, and sexual orientation. This course will provide an overview of social justice, culturally diverse counseling techniques, and identify how cultural values, beliefs, attitudes, public policies, and "isms" influence consumers and service providers. Emphasis will be placed on debunking cultural myths and stereotypes through the use of case studies, examples, and discussion to present implications and best practices for rehabilitation and mental health counselors, other human service providers, and educators in addressing the needs of culturally diverse consumers and students through direct service and referral. In addition, this course offers students an opportunity for self-exploration, growth, and expansion and sharing of diverse viewpoints. Finally, this course is designed to promote ethical and professional behavior when working with diverse populations. Prereq: Consent of instructor.

RC 540 CHEMICAL DEPENDENCY IN REHABILITATION COUNSELING. (3)

This course is designed to provide students with information about the disease concept and etiology of addiction and co-occurring disorders, theories and models and research of substance-related and addiction disorders, behavioral, psychosocial and physiological effects of alcohol and other drugs, screening, evaluation and assessment, diagnosis, treatment intervention, counseling strategies, and mental health counseling to address issues pertaining to multiculturalism, crises, disaster and trauma, family, prenatal exposure, co-occurring disorders, sexual orientation, and adult children of addicts. In addition, ethical and legal considerations of addiction counseling and principles of self-help programs and identification community resources are discussed. Prereq: Consent of instructor.

RC 546 TRANSDISCIPLINARY SERVICES FOR YOUNG CHILDREN. (3)

This course will focus on the philosophical issues related to teaching young children with multiple disabilities. Topics related to planning for the population of children, participants in the areas of communication, physical and motor development, health, vitality and sensory input will be presented. Strategies presented for planning will include transdisciplinary assessment persons centered planning and activity based instruction. Prereq: EDS 375 or EDS 600. (Same as IEC 546.)

RC 547 COLLABORATION AND INCLUSION IN SCHOOL AND COMMUNITY SETTINGS. (3)

This course will focus on inclusion of students with moderate to severe disabilities in all aspects of school and community life, with special consideration given to the individual student planning variables that must be addressed in meeting the needs of each school-age student and for preparing students to function as fully and independently in their communities as possible. The course is designed to meet the needs of those pursuing certification in Moderate and Severe Disabilities and pursuing degrees in Elementary and Secondary Education, Vocational Rehabilitation, School Psychology, Social Work, Physical Therapy, Communication Disorders, and related disciplines. Prereq: Consent of instructor. (Same as EDS 547.)

#RC 550 ETHICS IN REHABILITATION AND MENTAL HEALTH COUNSELING. (1)

This is a one-credit hour course designed to provide students with a comprehensive overview of the professional codes of ethics for Rehabilitation Counselors (CRCC) and mental health counselors (American Counseling Association.) A goal of this course is to acquire knowledge about ethical practice in serving persons with disabilities in a changing professional landscape. Emphasis will be on helping to recognize the implications of culture, class, and gender components, as well as identifying appropriate ethical behavior in various rehabilitation and mental health counseling-related practice areas. Prereq: Consent of instructor or admittance to graduate program in Rehabilitation or Mental Health Counseling.

#RC 552 REHABILITATION TECHNOLOGY IN EDUCATION AND EMPLOYMENT. (1)

This is a one-credit hour course. The contents of the course provide the student with the following information: introduction to different models of rehabilitation technology; understanding of the roles of the members of the interdisciplinary rehabilitation technology team; understanding of the various domains of rehabilitation technology across environments; applications of rehabilitation technology at work, home, school and in the community; understanding of funding sources and legal underpinnings for the provision of rehabilitation technology. Prereq: Consent of instructor or admittance to graduate program in Rehabilitation or Mental Health Counseling.

#RC 554 RURAL REHABILITATION. (3)

This course focuses on the various issues related to counseling service provision in rural areas. The course will also present methods and techniques utilized to meet the specific and unique needs of persons with disabilities living in rural areas. Prereq: Consent of instructor or admittance to graduate program in Rehabilitation or Mental Health Counseling.

RC 558 SPECIAL TOPICS IN REHABILITATION COUNSELING. (1-3)

Study of a selected topic within the field of rehabilitation. Topic to be chosen annually in accordance with student needs and interests. May be repeated to a maximum of six credits.

RC 560 SUPPORTED EMPLOYMENT, INDEPENDENT LIVING, AND TRANSITION. (3)

This course is designed to provide a basic knowledge and understanding of the origins, development, and underpinnings of supported employment, transition, and independent living for rehabilitation and clinical mental health counselors. The contents of the course provide the student with the following information: philosophies for transition and supported employment programs; the concept of Person Centered Planning; a model for developing a transitional process in the community; vocational training and placement concepts of transition and supported employment; perspectives and roles within supported employment and transition for rehabilitation and clinical mental health counselors; and major elements of independent living rehabilitation. Prereq: Admission to the Rehabilitation Counseling Program or consent of instructor.

#RC 570 CRISIS DISASTER AND TRAUMA RESPONSE FOR PERSONS WITH DISABILITIES. (1)

This course is intended to provide students with an overview of the clinical rehabilitation counseling and clinical mental health rehabilitation counseling issues, challenges and responses due to crises, disasters, and other trauma-causing events on persons with disabilities across the lifespan. Specific attention is given to major categories of disabilities, their limitations, and psychosocial responses to life-challenging and life-altering consequences of crisis and traumatic events. Information is presented on context and philosophy of developing best practices for working with people with disabilities and their families in achieving quality of life in advent of a crisis/traumatic situation.

RC 610 CASE MANAGEMENT IN CLINICAL REHABILITATION COUNSELING AND CLINICAL REHABILITATION COUNSELING IN MENTAL HEALTH. (3)

This course emphasizes the basic principles of helping persons with disabilities within the rehabilitation and clinical mental health processes. The course fosters both an appreciation and knowledge of how various theories and research findings translate into appropriate rehabilitation and clinical mental health counseling techniques. The course explores the roles or functions that rehabilitation and clinical mental health counselors play as they work in different clinical rehabilitation and counseling programs and agencies. Prereq: RC 520 or consent of instructor.

RC 613 LEGAL AND PARENTAL ISSUES SCHOOL ADMINISTRATION. (3)

This course is designed as a required course for certification in the school administration program or elective in graduate or post baccalaureate degree. Essential course questions will emphasize the delivery of a free and appropriate public education for children with disabilities within a practical application format that is accessible and useful to educational professionals. In addition, the course will consider the implications of federal requirements in state and local policy. Particular attention will be given to leadership within an educational reform environment as well as the legal and programmatic implications for children with disabilities and their families. Finally, the course will model appropriate ways in which educational professionals working with families can maximize educational results for children with and without disabilities. Prereq: Be admitted to an Administrator preparation program, or received permission of instructor. (Same as EDS 613.)

RC 620 ASSESSMENT IN REHABILITATION AND CLINICAL MENTAL HEALTH. (3)

This course includes effective methods and techniques used in determining the academic, intellectual, educational, and aptitude potential of persons with disabilities. Content also includes exploring the ethical practice of assessment and evaluation, test development, reliability, validity, and psychometrics, report writing, use of commercial evaluation systems, and the role of assessment in rehabilitation and clinical mental health counseling programs and agencies. Prereq: A vocational theories course and RC 520 or consent of instructor.

RC 630 CAREER DEVELOPMENT AND PLACEMENT SERVICE IN REHABILITATION AND CLINICAL MENTAL HEALTH COUNSELING. (3)

This course is designed to prepare rehabilitation and clinical mental health counselors in the development of skills for placement of persons with disabilities into a variety of settings including competitive employment, supported employment, and independent living. The course covers placement and career theory and development, pre-placement analysis, job readiness assessment, job development, job analysis, job engineering (work accommodations and modifications), employer attitudes, business rehabilitation, and social security disability. Occupational information and its use in the placement process including labor market analysis and procedures for analyzing client residual and transferable work skills will be addressed. Prereq: A vocational theories course, RC 520 and 620 or consent of instructor.

RC 640 REHABILITATION IN BUSINESS AND INDUSTRY. (3)

This course is designed to provide rehabilitation and clinical mental health counseling students with a comprehensive knowledge of rehabilitation in business environments. Skills to develop a professional working relationship between the rehabilitation and clinical mental health counseling professional, employers, the insurance industry, and other professionals will be taught. A thorough overview of worker compensation, related legislation, and other insurance will be presented. The roles and functions of the rehabilitation professional in business rehabilitation will be discussed. Prereq: Twelve hours of study in rehabilitation counseling or consent of instructor.

RC 650 CLINICAL REHABILITATION AND MENTAL HEALTH COUNSELING THEORY AND PRACTICE I. (3)

This is a two-semester sequence course. This sequence is designed to provide an overview of theories and techniques of rehabilitation mental health counseling and how they can be applied

to a wide variety of circumstances within clinical mental health counseling and rehabilitation counseling context for persons with disabilities. A goal of this course is to acquire knowledge about clinical mental health theoretical orientations and to integrate theory with practice. Emphasis will be on helping students clarify concepts of mental health counseling, personal and professional ethics and values, and personal style, and connecting those concepts and values to various mental health counseling theories, as well as identifying commonalities across theories as these relate to rehabilitation counseling. Prereq: Admission to the rehabilitation counseling program or consent of instructor.

RC 660 CLINICAL REHABILITATION AND MENTAL HEALTH COUNSELING THEORY AND PRACTICE II. (3)

This course represents one course of a two-semester course sequence. Together, these courses provide an overview of the techniques and theories of counseling and how they can be applied in a Clinical Rehabilitation and Mental Health Counseling context. These courses also allow you to acquire knowledge about theoretical orientations and to develop skill in integrating theory with counseling practice. Emphasis will be on helping students clarify beliefs, values, and personal style, and connecting those to the beliefs and values of the various theories; and identifying commonalities across theories as these relate to clinical rehabilitation and mental health counseling. We will also focus on helping to recognize culture, class, and gender component. Prereq: RC 650 or consent of instructor.

RC 670 GROUP AND FAMILY MENTAL HEALTH COUNSELING. (3)

This course is designed to prepare rehabilitation and clinical mental health counselors and other human service providers to become knowledgeable of counseling theory and skilled in group and family counseling techniques, with a focus on concerns related to disability and rehabilitation and clinical mental health counseling. The course will cover the history of group and family counseling, related counseling theories, elements of leadership in group counseling, family life cycle and models of healthy and unhealthy characteristics of families, culturally diverse perspectives of counseling, and ethical, legal, and professional issues. Students will gain practical experience with group counseling leadership and participation. Prereq: Admissions to the rehabilitation counseling or other human services program, and have counseling theories and techniques course, and consent of instructor.

RC 680 MENTAL HEALTH DIAGNOSIS AND TREATMENT PLANNING FOR COUNSELORS. (3)

This course is designed to provide students with a broad spectrum of psychological disorders that are encountered by rehabilitation clinical mental health counselors, and other mental health professionals in various treatment settings. Specific attention is given to the etiology, prevalence, symptoms, and treatment of these disorders. Students will develop a better understanding of the DSM and the International Classification of Diseases. This course incorporates both national and global perspectives of psychological disorders. Prereq: A knowledge-base of theories and techniques of counseling is preferred but not required.

RC 701 SEMINAR FOR EDSRC LEADERSHIP PERSONNEL. (1)

Study of issues and topics affecting the preparation of Rehabilitation Counseling, Special Education, and Early Childhood personnel and of research issues involving persons with disabilities and educational and rehabilitation programs. May be repeated to a maximum of six credits. Lecture, two hours per week. Prereq: Admission to Ed.S., EDS, RC, or IEC Ph.D. Programs. (Same as EDS/IEC 701.)

RC 710 CLINICAL PRACTICUM IN REHABILITATION AND MENTAL HEALTH COUNSELING. (3)

The course is designed to provide the student with clinical learning experiences under faculty supervision in a community-based or state rehabilitation mental health agency. The student is expected to demonstrate knowledge and skills in the application of rehabilitation and mental health counseling methods, techniques, and vocational knowledge in working with persons with disabilities. In addition, the student is required to perform all tasks in accordance to ethical and legal standards in clinical rehabilitation mental health counseling. Prereq: A minimum of 12 graduate hours in Rehabilitation Counseling and consent of instructor.

RC 711 SEMINAR IN ADVANCED REHABILITATION PRACTICES AND PROCEDURES. (3)

Advanced study of issues related to rehabilitation counseling, theory, research and practice including problem identification and assessment, program alternatives, services delivery models, theoretical and conceptual frameworks, the translation of theory and research into practice. Prereq: Admission to the doctoral program in Special Education and Rehabilitation Counseling.

RC 712 SEMINAR IN EDSRC PROFESSIONAL SERVICES. (3)

Education and Rehabilitation professional services including consultation, technical assistance, continuing education programs, professional organization development, committee and advisory board involvement, professional writing and editing, leadership training, and funding proposal development. Prereq: Admission to Ed.S., EDS, RC, or IEC Ph.D. Programs. (Same as EDS/IEC 712.)

RC 715 ADVANCED SEMINAR IN PSYCHOSOCIAL ASPECTS OF CHRONIC ILLNESS AND DISABILITY. (3)

This course is a doctoral seminar designed to provide advanced knowledge and understanding of psychosocial aspects of chronic illness and disability (CID), including theoretical, practice, and research approaches to the processes of adaptation to CID, coping, self-management and health decision making, historical and sociological perspectives on disability and cultural and global perspectives, responses, and attitudes about disability, developmental and lifespan issues, and evidence-based practice and interventions in professional rehabilitation counseling

practice, policy, and education. Students will engage in advanced analysis and synthesis of relevant theories and their application, and develop knowledge, skill, and experience in the application and teaching of related content in rehabilitation counseling education, research, policy, and practice. Prereq: Admission to the Ph.D. program in Special Education and Rehabilitation Counseling or permission of instructor.

RC 720 SEMINAR IN EDSRC TEACHER PREPARATION. (3)
Rehabilitation Counseling and Special Education college/university professor preparation, including syllabus development, organization of class presentations, instructional alternatives, scheduling, student assessment, professor-student interactions, student advising, resource identification and utilization and program evaluation. Prereq: Admission to Ed.S., EDS, RC, or IEC Ph.D. Programs. (Same as EDS/IEC 720.)

RC 721 PRACTICUM IN EDSRC PERSONNEL PREPARATION. (1-9)
Professional preparation of Rehabilitation Counselors or Special Education Teachers, including practice in delivering lectures, conducting class discussions, leading seminars, directing independent studies, guiding student research projects, demonstrating instructional methods and materials, supervising rehabilitation counselors or special education student teachers, and advising. Laboratory, three-nine hours. May be repeated to a maximum of nine credits. Prereq: Admission to Ed.S., EDS, RC, or IEC Ph.D. Programs. (Same as EDS/IEC 721.)

RC 730 CLINICAL INTERNSHIP IN REHABILITATION AND MENTAL HEALTH COUNSELING. (3,6,9)
This course is designed to provide the student with clinical professional advanced learning experiences under faculty supervision in a community-based or state rehabilitation mental health agency. The student is expected to demonstrate knowledge and skills in the application of rehabilitation counseling and mental health methods, techniques, and vocational knowledge in working with persons with disabilities. In addition the student is required to perform all tasks in accordance to ethical and legal standards in clinical rehabilitation mental health. A minimum of successful completion of one year in the Rehabilitation Counseling Program and RC 710 and consent of instructor.

RC 735 ADVANCED METHODS FOR TEACHING AND CONDUCTING RESEARCH IN REHABILITATION COUNSELING: FROM THEORY TO PRACTICE. (3)
Advanced study of issues related to developing a theoretical framework for conducting and teaching rehabilitation counseling research. The course will incorporate rehabilitation counseling theory into researchable paradigms. The focus will be on understanding issues related to disability, developing a theoretical framework for rehabilitation research, and applying research findings to teaching, practice, policy, and program evaluation. Prereq: Admission to the Ph.D. program in special education and rehabilitation counseling.

RC 740 ADMINISTRATION, SUPERVISION AND PROGRAM EVALUATION IN REHABILITATION COUNSELING. (3)
Administrative and supervisory aspects of rehabilitation service delivery. Administration, clinical and technical supervision, staffing, and organizational structure(s) of the rehabilitation service delivery system (state, local, and federal). Research, program evaluation, political and ethical aspects of rehabilitation administration and supervision are overviewed. Prereq: Admission to Ph.D. program in Special Education or Rehabilitation Counseling or consent of instructor.

RC 750 REHABILITATION AND MENTAL HEALTH COUNSELING RESEARCH AND PROGRAM EVALUATION. (3)
The purpose of this course is to introduce students to rehabilitation and mental health counseling research, program evaluation, and research methodology and so that they can become informed, critical, and reflective consumers and producers of quality research. This course provides a comprehensive introduction to research, statistics and research design, hypothesis testing, program evaluation, and research utilization. This is not a statistics course; however, students will be introduced to basic statistical procedures, concepts, and terms. Prereq: A basic research course and RC 520 or consent of instructor.

RC 760 CONTEMPORARY PRACTICES IN REHABILITATION. (1-3)
Contemporary practices including supported employment, independent living, engineering and technology, family matters, client rights, ethical practices, cultural diversity, aging, and present and future trends in the field of rehabilitation. Analysis of legislation, value systems, political and economic fluctuations and research. Prereq: A minimum of 12 graduate hours in rehabilitation counseling or consent of instructor.

RC 767 DISSERTATION RESIDENCY CREDIT. (2)
Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended. Prereq: Admission to Ed.S., EDS, RC, or IEC Ph.D. Programs. (Same as EDS/IEC 767.)

RC 770 ADVANCED SEMINAR IN REHABILITATION COUNSELING THEORY, PRACTICE, AND EDUCATION. (3)
This course is a doctoral seminar designed to provide advanced knowledge and understanding of personality and counseling theories and techniques and their application in professional rehabilitation counseling practice and education, rehabilitation counseling process and outcome research, and the application of counseling theory across diverse populations and settings. Students will engage in advanced analysis and synthesis of counseling theories and their application, and develop knowledge, skill, and experience in the application and teaching of related content in rehabilitation counseling education, research, and practice. Prereq: Admission to the Ph.D. program in Special Education and Rehabilitation Counseling.

RC 782 DIRECTED INDEPENDENT STUDY. (3)
Study of an individually selected topic relevant to a student's academic development. May be repeated to a maximum of six credits. Prereq: Consent of instructor.

RC 789 INDEPENDENT STUDY IN EARLY CHILDHOOD/SPECIAL EDUCATION/REHABILITATION COUNSELING RESEARCH. (1-6)
An independent study supervised research course for advanced graduate students in Rehabilitation Counseling, Special Education, or Early Childhood with an interest in a specific research problem. Class hours determined with supervising instructor. Note: For Rehabilitation Counseling doctoral students this course will satisfy CACREP internship requirements in the Research core area. Additional internship in 2 additional core areas are also required. Prereq: Admission to EDSRC Doctoral Program or approval of instructor. (Same as EDS 789.)

#RC 790 RESEARCH AND PUBLICATION INTERNSHIP I. (3)
This doctoral internship course is designed to spur Ph.D. students toward effective work on scholarly research and completion of an approved prospectus by the end of the academic year. For part II of this course, students will be required to conclude their data collection, analyze data, complete methodology and discussion, and submit for publication. Prereq: Admission to Ed.S., EDS, RC, or IEC Ph.D. Programs. 6 hours minimum of graduate level statistics post admission into doctoral program.

#RC 791 RESEARCH AND PUBLICATION INTERNSHIP II. (3)
This supervised doctoral internship course is designed to develop Ph.D. students toward effective work on scholarly research and completion of an approved prospectus by the end of the academic year. For part II of this course, students will be required to conclude their data collection, analyze data, complete methodology and discussion, and submit for publication. It is, however, expected that each student will continue to make revisions to all work completed and submitted from RC 790. Prereq: RC 790.

RHB Rehabilitation Sciences

RHB 625 MUSCLE FORUM. (1)
Muscle Forum is a course that will allow students to develop critical evaluatory skills for seminars and grant writing in the field of Muscle Biology. Prereq: Students need to be enrolled in the Rehabilitation Sciences doctoral program, one of the graduate programs of the Integrative Biomedical Sciences, or with permission of the course director. (Same as PGY 625.)

RHB 701 REHABILITATION THEORIES AND APPLICATION THROUGH THE LIFE SPAN. (3)
Explores the theories common to all the rehabilitation therapies (PT, CD, OT) and that form a foundation for the rehabilitation sciences. Included are theories specific to rehabilitation, attachment, adaptation and resilience, cognition, motor learning, empowerment, loss and grief, psycho-immunology, and the societal responses to stigmatized groups. Theories are applied to rehabilitation practice and research design across the life span. Prereq: Admission to the Rehabilitation Sciences Ph.D. program or consent of the instructor.

RHB 710 NEUROPLASTICITY IN REHABILITATION. (3)
This course will examine the neurological principles utilized by each of the rehabilitation disciplines (PT, OT, SLP) in the context of current research data and determine whether these principles hold up to scientific examination. The format of this course will utilize formal lectures on current theories of neuroplasticity and class discussion on current literature in each of these areas. Case studies will be utilized to apply current theories to practical application within each of the listed disciplines. Prereq: Course in Neuroanatomy, Admission to the Rehabilitation Sciences Doctoral Program or by consent of the instructor.

RHB 712 PHARMACOLOGY IN REHABILITATION. (2-3)
This course will provide the basic science background necessary to understand the effects of medications on patients treated in the rehabilitation setting and their influence on treatment. Topics will include mechanisms of drug action, side effects, and how age and disease alter those mechanisms. The course will also address newly developing drug treatment strategies, including those in clinical trials. Students may either take the course for two credits or complete an additional advanced project for 3 credits, as outlined in the syllabus. The advanced project will enable the more interested student to pursue a topic in greater depth. Prereq: Admission to the Rehabilitation Sciences Doctoral Program or consent of instructor.

RHB 714 CRITICAL APPRAISAL OF RESEARCH IN REHABILITATION SCIENCES. (3)
This course will introduce the student to critical appraisal of all forms of research in the Rehabilitation Sciences. The purpose of this course is to further develop the student's competence in carrying out and evaluating research. The student will develop the skills necessary to find, critically evaluate, and synthesize the available research.

RHB 720 RESEARCH IN THE REHABILITATION SCIENCES. (3)
The purpose of this course is to provide a critical review of the current practices in research methodologies in rehabilitation and investigate the consequences of selecting various research methodologies and analytic strategies.

RHB 744 ADVANCED TOPICS IN MOTOR DEVELOPMENT. (3)
Investigation of motor development, control, and learning and teaching strategies in pediatrics. In depth analysis of movement for specific function tasks and motor dysfunction with identification of both primary and secondary designated problem areas in children with neurodevelopmental concerns. Prereq: Admission to the Rehabilitation Sciences Ph.D. program or consent of the instructor.

RHB 749 DISSERTATION RESEARCH**IN REHABILITATION SCIENCES. (0)**

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Admission to the Rehabilitation Sciences Ph.D. program.

RHB 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

RHB 769 RESIDENCE CREDIT FOR THE DOCTORAL DEGREE. (0-9)

May be repeated to a maximum of 18 credits. Prereq: Admission to the Rehabilitation Sciences Ph.D. program.

RHB 770 PROFESSIONAL SEMINAR IN REHABILITATION SCIENCES. (0-3)

A study of selected topics related to leadership issues in the Rehabilitation Sciences with emphasis on recent research and theory related to higher education and to the communication disorders, occupational therapy, physical therapy, and athletic training disciplines. Sample topics include research methods and current topics, interdisciplinary issues, health systems, grant writing, teaching and learning in higher education, and the culture of colleges and universities. Prereq: Admission to the Rehabilitation Sciences Ph.D. program or consent of the instructor.

RHB 787 TEACHING APPRENTICESHIP IN REHABILITATION SCIENCES. (1-4)

Study of instructional methods in higher education including development of syllabi, class presentations, and examinations. Emphasis on classroom dynamics and innovative techniques for instruction. May be repeated to a maximum of four credits. Prereq: Admission to the Rehabilitation Sciences Ph.D. program in communication disorders or physical therapy or consent of the instructor.

RHB 788 INDEPENDENT STUDY IN REHABILITATION SCIENCES. (1-3)

Independent study for graduate students interested in specific interdisciplinary topics in Rehabilitation Sciences. May be repeated to a maximum of six credits. Prereq: Admission to the Rehabilitation Sciences Ph.D. program or consent of the instructor.

RHB 789 RESEARCH APPRENTICESHIP IN REHABILITATION SCIENCES. (1-9)

In-depth study of a discipline specific topic under the direction of a member of the graduate faculty. Emphasis on scientific method including development of a research question, methodology, data collection and analysis. Students will complete a supervised research project during the course. Variable credit hours repeatable to a maximum of 21 credit hours. Prereq: Admission to the Rehabilitation Sciences Ph.D. program or consent of the instructor.

RM Radiation Medicine**RM 472G INTERACTION OF RADIATION WITH MATTER. (3)**

Basic aspects of the interaction of ionizing radiation with matter. Bohr atom, atomic spectra, radioactivity, energetics of decay. Sources of radiation, penetration of charged particles, electromagnetic radiation, and neutrons through matter; excitation and ionization processes; selected nuclear reactions; basic radiation detection and dosimetry. Prereq: PHY 213 or 232; MA 114 (may be taken concurrently); or equivalent. (Same as PHY/RAS 472G.)

RM 545 RADIATION HAZARDS AND PROTECTION. (3)

An analysis of common radiation hazards encountered in medicine, research, industry, and the environment. Regulations and procedures for the safe use of ionizing and non-ionizing radiations. Lecture, two hours; laboratory, two and one-half hours. Prereq: PHY/RM 472G or consent of instructor. (Same as PHY/RAS 545.)

RM 546 GENERAL MEDICAL RADIOLOGICAL PHYSICS. (3)

The uses and dosimetric aspects of radiation in medicine will be analyzed, including many basic applications in the fields of diagnostic radiology physics, therapy physics, and nuclear medical physics. Prereq or concur: RM/PHY 472G or consent of instructor. (Same as PHY/RAS 546.)

RM 601 ADVANCED RADIATION DOSIMETRY. (2)

Advanced aspects of the interaction of radiation with matter and specialized topics in the dosimetry of ionizing radiations. Modifications of Bragg-Gray theory for application to megavoltage sources. Beta dosimetry. Specialized calibration techniques. Relative response functions of various media. Nontraditional techniques. Dosimetry of radiation fields including complex spectra. Prereq: PHY 472G, RM 546, or equivalent. (Same as RAS 601.)

RM 647 PHYSICS OF DIAGNOSTIC IMAGING I. (3)

Specialized and advanced topics in diagnostic imaging, including modulation transfer function analysis, image processing algorithms, acceptance testing, CT, NMR, ultrasound, etc. Prereq: PHY/RM/RAS 546 or consent of instructor. (Same as RAS 647.)

RM 648 PHYSICS OF DIAGNOSTIC IMAGING II. (3)

A continuation of RAS/RM 647. Specialized and advanced topics in nuclear medicine imaging physics, including positron emission tomographic procedures, emerging new modalities, and quality control. Prereq: RM/RAS 647 or consent of instructor. (Same as RAS 648.)

RM 649 PHYSICS OF RADIATION THERAPY. (3)

Specialized external beam and brachytherapy treatment planning; advanced Bragg-Gray cavity applications, including Ngas and TG-21; calibration, acceptance testing, and quality control of therapy physics equipment. Prereq: RAS/RM/PHY 546 and RAS/RM 601, or consent of instructor. (Same as RAS 649.)

RM 650 PHYSICS OF RADIATION THERAPY II: BRACHYTHERAPY PHYSICS. (2)

A presentation of the full scope of use of implanted radiation sources for medical purposes. The course includes consideration of all aspects of brachytherapy dosimetry and treatment planning as well as modern and cutting-edge brachytherapy clinical practice. Characteristics of interstitial, intracavitary, and intraluminal implants, as well as remote afterloaders, are considered. Prereq: RAS/RM/PHY 546; RM/PHY 472G; RAS/RM 649 (may be co-requisite). (Same as RAS 650.)

RM 660 GRADUATE PRACTICUM IN RADIATION MEDICINE. (1-6)

Applied field work at the graduate level in the sciences relating to radiation medicine. May be repeated to a maximum of six credits. Prereq: Graduate standing in the bioradiation or medical sciences, plus consent of instructor.

RM 695 RESEARCH IN THE HEALTH-RELATED RADIATION SCIENCES. (1-4)

Independent directed research on theoretical and practical problems in the health-related radiation sciences. May be repeated to a maximum of eight credits. Prereq: Graduate standing in one of the radiation-related sciences, plus consent of instructor. (Same as RAS 695.)

RM 740 MAMMALIAN RADIATION BIOLOGY. (2)

The physical and biological sequelae of radiation effects will be discussed emphasizing human and mammalian responses and radiation health. Emphasis will be for health and medical workers. Prereq: Consent of instructor; BIO/RM 540 or RM 546 or equivalent background. (Same as BIO 740.)

RM 815 FIRST-YEAR ELECTIVE, RADIATION MEDICINE. (1-3)

With the advice and approval of his or her faculty adviser, the first-year student may choose approved electives offered by the Department of Radiation Medicine. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the first-year curriculum. Pass-fail only. Prereq: Admission to first year, College of Medicine.

RM 825 SECOND-YEAR ELECTIVE, RADIATION MEDICINE. (1-4)

With the advice and approval of his or her faculty adviser, the second-year student may choose approved electives offered by the Department of Radiation Medicine. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the second-year curriculum. Pass-fail only. Prereq: Admission to second-year medical curriculum and approval of adviser.

RM 842 RADIATION ONCOLOGY. (1)

Use of radiation therapy in clinical treatment of malignancy. Staging, histology, spread, treatment techniques, acute and late effects of radiation therapy. Prereq: RM 740 and an introductory anatomy course, or equivalent, and consent of instructor.

RM 848 PRACTICUM IN BRACHYTHERAPY PHYSICS. (1-3)

This course offers practicum training in the clinical use of therapy physics and health physics in brachytherapy. May be repeated to a maximum of three credits. Laboratory: 40 hours per week. Prereq: RM/HRS 649, or equivalent, and consent of instructional staff.

RM 849 PRACTICUM IN EXTERNAL BEAM THERAPY PHYSICS. (1-6)

This course offers practicum training in the professional use of therapy physics in external beam radiation therapy. May be repeated to a maximum of six credits. Laboratory: 40 hours per week. Prereq: RM/HRS 649, or equivalent, and consent of instructor.

RM 850-899 FOURTH-YEAR ELECTIVE FOR MEDICAL STUDENTS. (1-6)

With the advice and approval of the faculty adviser and the Student Progress and Promotions Committee, the fourth-year student may choose approved electives offered by the various departments in the College of Medicine. The intent is to provide the student an opportunity to develop his fund of knowledge and clinical competence. Prereq: Admission to the fourth year, College of Medicine and/or permission of the Student Progress and Promotions Committee.

Approved electives:**RM 850 RADIATION ONCOLOGY.****RM 852 RESEARCH IN RADIATION MEDICINE.****RS Religious Studies****RS 130 INTRODUCTION TO COMPARATIVE RELIGION. (3)**

Comparative study of major world and selected regional religions with emphasis on analysis of belief, ritual, artistic expression and social organization. Eastern and Western religions are considered. (Same as ANT 130.)

RSC Reproductive Sciences

RSC 700 MAMMALIAN REPRODUCTION. (3)

The course will introduce students to the mammalian reproductive system and its function. The objective is to provide students with knowledge on the anatomy, endocrine regulation and physiology of reproduction. Comparison of reproductive function will be made among species and the scientific research methods used to investigate these systems will be introduced. Prereq: BIO 150 and BIO 152 or consent of the Course Director.

RSC 701 ADVANCED REPRODUCTIVE IMMUNOLOGY. (3)

Immune mechanisms involved during pregnancy will be covered with a focus on the interactions between the placenta and the maternal immune system. The role of the immune system on defects during pregnancy will be discussed, including the role in pre-term labor, implantation, and preeclampsia. The response of the normal immune system on the developing fetus will be covered. Prereq: Admission into the Ph.D. in Reproductive Sciences program or consent of instructor.

RSC 702 MOLECULAR REPRODUCTION. (3)

The in-depth structure and function of the mammalian reproductive system will be studied as it relates to the understanding of human reproduction at the molecular level. Both male and female reproductive organs and associated hormones and behaviors will be studied. Experts in relevant fields will give lectures and students will be involved in discussions with the lecturers. Prereq: Admission into the Reproductive Sciences Ph.D. program or permission of the course director and/or IBS 601.

RSC 703 BIOLOGY AND THERAPY OF REPRODUCTIVE CANCERS. (3)

The course will introduce students to the fundamentals of biological and molecular events related to disease progression, and to current therapeutic modalities for the treatment of reproductive cancers. The course will include lectures for each topic area. In addition, there will be discussions and student presentations on related topics. Prereq: Admission to the Ph.D. program in Reproductive Sciences, or consent of the instructor. Courses in cell biology, molecular biology and cancer therapy are helpful prerequisites.

RSC 767 REPRODUCTIVE SCIENCES POST-QUALIFYING RESEARCH. (2)

Research in Reproductive Sciences following successful completion of the qualifying examination. Research initiated in RSC 790 will be expanded to answer a proposed research question or questions. Following acceptable collection of data the student will write a dissertation and defend the dissertation at an oral defense. In addition the student must submit his/her findings to a peer-reviewed scientific publication journal. Prereq: Successful completion of the qualifying examination.

RSC 790 REPRODUCTIVE SCIENCES PRE-QUALIFYING RESEARCH. (1-5)

Research in Reproductive Sciences prior to the pre-qualifying examination. Students will identify a research problem, develop research skills, apply research methods and write a research proposal. Prereq: Successful completion of years 1 and 2 of the RSC Ph.D. curriculum, including rotations in a minimum of 3 different research laboratories.

RSD Restorative Dentistry

***RSD 810 RESTORATIVE DENTISTRY I. (3)**

This lecture course in operative dentistry is designed to provide a beginning student with basic knowledge about cavity preparation and restorative techniques for composite, amalgam, and other direct restorative materials. This course, together with a complementary laboratory course, is directed at preparing the student with knowledge and skills in the diagnosis and treatment of carious lesions necessary for patient care in operative dentistry. Coreq: RSD 814.

RSD 811 PRINCIPLES OF DENTAL ANATOMY, MORPHOLOGY AND OCCLUSION. (3)

This introductory lecture course is designed to provide the dental student with necessary knowledge of dental anatomy, dental morphology and basic dental occlusion for all succeeding courses in preclinical and clinical dentistry. This includes a detailed description and study of individual teeth, relationship of dentoforn and function, mandibular movement and introduction to muscles of mastication. Lectures related to biomaterials are added as needed. Prereq: Admission to the college or consent of the course director. Coreq: RSD 812.

RSD 812 PRINCIPLES OF DENTAL ANATOMY, MORPHOLOGY AND OCCLUSION (LABORATORY). (3)

This introductory laboratory course is designed to provide the beginning dental student with skills manipulating wax to successfully replicate the dental anatomy of individual teeth as well as learning the relationships of form and function within the context of mandibular movement. These skills are learned by use of the dentoforn as well as dental articulator. Laboratory experiences relating to dental biomaterials are introduced as needed. Prereq: Admission to the college or consent of course director. Coreq: RSD 811.

RSD 813 DENTAL CARIOLOGY. (1)

This course is designed to review the biological basis for the concepts and treatment procedures of dental caries as an infectious disease and will provide didactic foundational knowledge for the clinical management of dental caries.

***RSD 814 PRECLINICAL OPERATIVE DENTISTRY I. (3)**

This first-year preclinical laboratory course in operative dentistry is designed to provide a beginning student with basic skills for cavity preparation and restorative techniques for amalgam and resin composite. This course, together with the complementary lecture series course, RSD 810, is directed at preparing the student with the knowledge and skill necessary for patient care in operative dentistry. Coreq: RSD 810 (Lecture component).

RSD 816 ESTHETIC DENTISTRY I. (1)

This lecture course is designed to provide a beginning student the basic principles of cavity preparation and restoration with esthetic dental materials. Materials include resin composite, resin ionomer and glass ionomer. This course, together with the complementary laboratory course, RSD 818, is directed at preparing the student with knowledge and skills in the diagnosis and treatment of defective tooth structure associated with anterior teeth. Prereq: RSD 812, RSD 810, RSD 814 or the consent of the course director.

RSD 818 PRECLINICAL ESTHETIC DENTISTRY I. (1)

This first-year preclinical laboratory course in esthetic dentistry is designed to provide a beginning student with the basic skills for cavity preparation and restorative techniques for using tooth-colored restorative materials. This course, together with the complementary lecture series course, RSD 816, is directed at preparing the student for patient care in esthetic dentistry. Prereq: RSD 812, RSD 810, RSD 814 or consent of the course director.

RSD 821 CLINICAL RESTORATIVE DENTISTRY I. (3)

This course emphasizes clinical application of the principles taught in preclinical courses. Concepts of diagnostic and therapeutic procedures as well as preventive measures are applied in the clinic with emphasis on the demonstration of competency in rendering primary care type treatment procedures. Prereq: RSD 814; coreq: RSD 824.

***RSD 822 PRINCIPLES OF DENTAL OCCLUSION AND ARTICULATION. (3)**

This course is directed toward the examination, diagnosis, treatment planning, and treatment of various occlusal problems. The student will learn the skills needed to analyze the dental occlusion of patients and to plan successful occlusal therapy including restorative procedures and fixed prosthodontic treatment. The course will concentrate on developing technical skills and learning assessment criteria related to mounted study casts, occlusal examination and analysis, selective occlusal adjustment, diagnostic pre-waxing and planning, and the fabrication of a muscle relaxation occlusal splint. Prereq: CDS 815, RSD 812, or with approval of the course director.

***RSD 823 RESTORATIVE DENTISTRY II. (1)**

This is a didactic course with emphasis on the basic knowledge required for tooth preparation and indirect single tooth dental restoration. The materials science and correct manipulation of dental stones, alloys and luting agents are emphasized. Prereq: RSD 810, RSD 812, RSD 814, or consent of instructor.

***RSD 824 PRECLINICAL RESTORATIVE DENTISTRY II. (2)**

This preclinical course places emphasis on dental hard tissue surgery and on their restoration to meet the biological needs of the patient. Tooth preparation and extracoronar restorations are performed on manikins and extracted teeth. The materials science and correct manipulation of investments, alloys and cements used to make case restorations are emphasized. Knowledge gained in dental morphology and occlusion is applied in the course. Prereq: RSD 812, RSD 814 or consent of instructor.

***RSD 825 RESTORATIVE DENTISTRY III. (1)**

This course is a continuation of RSD 823 with emphasis on single tooth indirect intracoronal restorations and restorations of the endodontically treated tooth. Prereq: RSD 823.

***RSD 826 PRECLINICAL RESTORATIVE DENTISTRY III. (2)**

This is a preclinical course with emphasis on dental hard tissue surgery and restorative procedures for single tooth indirect restorations. Clinical simulation procedures are performed on manikins and extracted teeth. Prereq: RSD 823, RSD 824, or consent of course instructor; coreq: RSD 825.

***RSD 827 DENTAL BIOMATERIALS. (2)**

In this course, the materials science, proper manipulation and biocompatibility of a wide variety of dental biomaterials are examined. The durability and biocompatibility of similarly utilized materials are compared. Diagnosis of the causes of clinical materials-related failures is emphasized. Prereq: Admission to the College of Dentistry.

***RSD 831 CLINICAL RESTORATIVE DENTISTRY II. (4)**

A continuation of RSD 821 as well as some clinical application of principles taught in RSD 824. The emphasis continues to be on the delivery of primary care type treatment with increasing competency and proficiency. Some emphasis is directed toward elementary experiences in rehabilitative type treatment procedures and occlusal dysfunctions. Prereq: RSD 821 and RSD 824; coreq: PRO 836 and PRO 834.

***RSD 835 ADVANCED ESTHETICS
IN RESTORATIVE DENTISTRY.** (2)

This course is designed to introduce current concepts in esthetic restorative dentistry to undergraduate dental students in their third year. The techniques presented will build upon previously developed restorative didactic and clinical knowledge, but incorporate additional dental techniques and materials developed specifically for esthetic dentistry. Current dental materials being used by this discipline will be discussed as they apply to specific topics. Prereq: RSD 810, 812, 814, 816, 821, 822, 823/825, 824, 826, and 827.

***RSD 840 RESTORATIVE DENTISTRY UPDATE.** (1)

Students are provided current information on advanced restorative dentistry clinical procedures and materials. Emphasis will be given to diagnosis, treatment planning and treatment of the complex restorative dentistry patient. The format of the course will be "clinical case presentation." Prereq: PRO 836 and PRO 834.

***RSD 841 CLINICAL RESTORATIVE DENTISTRY III.** (3)

As the final phase in the undergraduate clinical continuum, this course continues to emphasize primary care concepts and proficiency. In addition, more complicated rehabilitative type care and occlusal dysfunction problems are encountered by the student under faculty supervision. Prereq: PRO 836, RSD 831, and PRO 834.

***RSD 880 COMPACTED GOLD RESTORATIONS.** (1)

This course introduces the student to the use of compacted gold as a restorative material. The restoration of Class III and Class V lesions is performed in the laboratory. Students are required to purchase gold they use in the course. Note: scheduling for this course will be outside of regularly scheduled class/clinic time. Prereq: RSD 824, third year standing.

RSD 882 ESTHETIC DENTISTRY ELECTIVE. (1)

This course is designed to introduce current concepts in esthetic restorative dentistry to undergraduate dental students in their 4th academic year. The techniques presented will build upon previously developed restorative didactic and clinical knowledge, but incorporate additional dental techniques and materials developed specifically for esthetic dentistry. Current dental materials being used by this discipline will be discussed as they apply to specific topics. Lecture, nine hours. Note: scheduling for this course will be outside of regularly scheduled clinic/class time. Prereq: RSD 810, 814, 816, 818, 821, 822, 823/824, 825/826, 827 or consent of course director.

***RSD 883 INTRODUCTION TO SPORTS DENTISTRY.** (1)

Introduction to Sports Dentistry is an elective course designed to educate about the opportunities available to become involved with sports teams in your community. The course topics will include: Types of dental injuries related to athletics, prevention of injuries, role of team dentist, types of sports guards and methods of fabrication of sports guards. Prereq: 4th year dental student in good standing; consent of course director. Note: Scheduling of this course will be outside the regularly scheduled clinic/class time.

RTM Retailing and Tourism Management

***RTM 340 PROFESSIONAL PRACTICE.** (1)

Self-assessment of student's strengths, limitations, and career aspirations. Preparation of reference files, letters, and resumes. Identification of, application to, and acceptance by department-approved agencies for completion of internship experience. Prereq: "C" or above in HMT 270 or MAT 237 and Sophomore standing or higher.

***RTM 345 SERVICE MANAGEMENT.** (3)

A survey of the special characteristics, problems, and methods for managing service-oriented organizations. Students will learn principles of services and guest services management in order to see how they can be used in managing any service organization. The course also introduces quantitative techniques associated with managing organizations in the service sector. Upon completion of the course, the students will be able to apply the concepts to their work experiences. Prereq: "C" or above in HMT 308 or MAT 237.

***RTM 425 HUMAN RESOURCE MANAGEMENT.** (3)

Demonstrate knowledge of human resource management and its role in retail business including: employment, training, performance management, compensation, and providing a safe, ethical and fair environment. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK. Prereq: Completion of UK Core Comp and Comm requirement, junior standing or higher. Limited to HMT and MAT majors.

**RTM 499 RETAILING AND TOURISM
MANAGEMENT INTERNSHIP.** (6)

Provides prospective HMT and MAT professionals a 320-hour, 8 week learning experience in a selected agency or organization, under the joint supervision of a qualified manager and a university internship supervisor. More specific details are available in the RTM Internship Manual. Prereq: "C" or better in HMT 120 or MAT 114, HMT 210 or MAT 120, HMT 270 or MAT 237, HMT 350 or MAT 315, RTM 340 and RTM 345 plus 100 approved hours of pre-internship experience.

**RTM 600 RESEARCH METHODOLOGY
IN HUMAN ENVIRONMENTAL SCIENCES.** (3)

Students will study scientific techniques and accepted research methodologies in human environmental science research. Emphasis is placed on understanding the research process and developing the skills necessary to evaluate and implement research methods and design procedures. Prereq: Graduate standing. (Same as HES 600.)

RTM 650 SURVEY OF CURRENT THEORIES AND LITERATURE. (3)

An intensive survey of the theoretical and empirical literature related to areas of merchandising, apparel, and textiles and to hospitality management and tourism. Emphasis will be placed on research literature and theory building. Prereq: Graduate standing.

**RTM 690 INDUSTRY EXPERIENCE IN RETAILING
AND TOURISM MANAGEMENT.** (6)

Supervised industry experience with a cooperative establishment in the student's formal option of study. Students will complete a 400-hour, 10 week learning experience under the joint supervision of a faculty member supervisor and a qualified industry professional. Prereq: Graduate student standing. Approval of department and student's plan of work committee.

RTM 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters.

RTM 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 credit hours. Prereq: All course work must be completed before registration for the course.

RTM 772 SEMINAR IN RETAILING AND TOURISM MANAGEMENT. (3)

Current investigation of topics relevant to both retailing and tourism management. May be repeated to a maximum of six credit hours.

RUS Russian

RUS 101 ELEMENTARY RUSSIAN. (4)

The students are introduced to the language through grammatical explanations, recitation practice, and oral as well as written exercises. The emphasis is on the spoken language of everyday use, reading of graded Russian texts, vocabulary building and accurate pronunciation. Extensive work with tape recordings. Lecture, three hours; supervised recitation, one hour per week. Prereq: Russian Placement Exam. All students who have had two or more years of high school Russian or are native speakers of Russian and are enrolling in college-level Russian for the first time must take the Russian Placement Exam.

RUS 102 ELEMENTARY RUSSIAN. (4)

A continuation of RUS 101. Lecture, three hours; supervised recitation, one hour per week. Prereq: RUS 101 or RAE 101, Russian Placement Exam or equivalent.

RUS 201 INTERMEDIATE RUSSIAN. (4)

Systematic study of grammar. Introduction through simplified texts to the life and culture of Tsarist and Soviet Russia. Dictation, composition, conversation, and extensive oral practice. Lecture, three hours; recitation, one hour per week. Prereq: RUS 102 or RAE 102, Russian Placement Exam or the equivalent. (Required.)

RUS 202 INTERMEDIATE RUSSIAN. (4)

A continuation of RUS 201. Lecture, three hours; recitation, one hour per week. Prereq: RUS 201 or RAE 201, Russian Placement Exam or equivalent. (Required.)

RUS 261 INTRODUCTION TO RUSSIAN STUDIES. (3)

A study of Russian literature from its beginning to the present using selected major works of prose, poetry and drama. No knowledge of Russian is required.

RUS 275 RUSSIAN FILM. (3)

This course will introduce students to the major films and film makers of the Soviet Union and Russia. It will trace the major artistic, political, cultural, and social influences and movements that shaped Russian and Soviet film. Students will view not only Russian feature films, but also documentary films and animation. Students will explore how the history and products of Russian and Soviet film are woven into the larger context of world cinema and into (Soviet) Russian history and society. Students will consider how the components of the films themselves contribute to their notoriety and lasting appeal. Taught in English.

RUS 301 CONVERSATION AND COMPOSITION I. (3)

A course designed to increase students' skills in the areas of listening, speaking, writing, reading and culture. More complex grammatical forms introduced; focus on control of basic grammar. Development of students' lexicon through more advanced reading and writing, conversation, watching films, listening to audio materials, etc. Prereq: RUS 202 or equivalent.

RUS 302 ADVANCED INTERMEDIATE RUSSIAN II. (3)

A course designed to increase students' skills in the areas of listening, speaking, writing, reading and culture. More complex grammatical forms introduced; focus on control of basic grammar. Development of students' lexicon through more advanced reading, conversation, watching films, listening to tapes, etc. Prereq: RUS 301 or equivalent.

Course Descriptions

RUS 370 RUSSIAN FOLKLORE (in English). (3)

Central issues of Russian folk culture, particularly related to ritual, material culture, and oral lore; patterns and functions of folk architecture, clothing, and crafts in 19th C. peasant life.

***RUS 371 THE RUSSIAN CULTURAL IMAGINATION: 900-1900. (3)**

An introduction to and survey of Russian culture from its origins until the 20th century that acquaints students with the roots of Russian religion, the arts, architecture, music, folklore, and everyday life. Taught in English.

***RUS 372 EXPERIMENTS IN LIFE AND ART: RUSSIAN CULTURE 1900-PRESENT. (3)**

An introduction to and survey of Russian culture since 1900 that acquaints students with the development of Russian and Soviet culture as manifested in the arts, architecture, music, folklore, religion, and everyday life. Taught in English.

***RUS 380 LOVE AND DEATH IN 19TH CENTURY RUSSIAN LITERATURE. (3)**

A survey of Russian literature of the 19th Century. Emphasis is on the development of romanticism, the rise of realism, and end-of-century decadence. All readings, lectures, and discussions are in English. Students taking the course for Russian major credit are expected to do outside work in Russian.

***RUS 381 WRITING, REVOLUTION & REACTION IN MODERN RUSSIAN LITERATURE. (3)**

An in-depth examination of Russian literature since 1900, with special attention given to modernist trends, Socialist Realism, non-conformism, Russian literature abroad. Course taught in English. Students taking the course for Russian major credit will be assigned readings in Russian.

RUS 395 INDEPENDENT WORK IN RUSSIAN. (1-3)

Students who have the proper qualifications may undertake a special problem in reading and research. May be repeated to a maximum of six credits. (Recommended.)

RUS 401 ADVANCED RUSSIAN I. (3)

Detailed study of complex grammatical forms. Continued emphasis on speaking, reading, listening, and writing on the advanced level. Prereq: RUS 302 or equivalent, consent of instructor.

***RUS 404 ADVANCED RUSSIAN II. (3)**

Detailed study of complex grammatical forms. Continued emphasis on speaking, reading, listening, and writing on the advanced level. Prereq: RUS 401 or consent of instructor.

RUS 410G RUSSIAN FOR SPECIAL PURPOSES (Subtitle required). (3)

This course focuses on specialized aspects of Russian, including, but not limited to, translation and interpretation, business Russian, stylistics, structure of Russian, etc. May be repeated under different subtitles for up to 9 hours. Prereq: Completion of RUS 302 or equivalent or by permission of the instructor.

RUS 420G READINGS IN RUSSIAN LITERATURE (Subtitle required). (3)

Subtitle Required. Repeatable up to 6 credits. This course examines in depth a particular author, genre, or literary movement that is central to understanding the dynamics of the history of Russian Literature from its earliest texts and movements to the present. Topics may include, but are not limited to, "Soviet Satire," "The Novels of Dostoevsky," "Chekhov's Plays," "Russian Symbolism," etc. Readings will be in both Russian and English; class conducted in Russian. Prereq: RUS 401 or permission of the instructor.

RUS 495G ADVANCED INDEPENDENT WORK IN RUSSIAN STUDIES. (1-3)

Independent research in Russian Studies on an advanced level for undergraduates and for graduate students outside the discipline. Students will be required to establish a written contract with the relevant faculty member describing the tasks to be completed in the course. May be repeated to a maximum of six credits, or a total of six credits of RUS 395 and 495G. Prereq: Consent of instructor.

RUS 501 STRUCTURE OF RUSSIAN. (3)

An in-depth study of the history and structure of Russian in a variety of textual contexts. Historical changes that have led to significant contemporary features will be emphasized. Taught in Russian. Prereq: RUS 404 or consent of instructor.

RUS 502 STRUCTURE OF RUSSIAN. (3)

An overview of the sound system, morphological system and syntax of contemporary Russian. Prereq: RUS 501 or permission of instructor.

RUS 525 RUSSIAN LITERARY STUDIES (Subtitle required). (3)

An in-depth study of some aspect of Russian or Soviet literature, e.g., works of a single author or of several authors, a particular time period, a specific genre or theme, etc. Students taking the course for Russian credit will be expected to do readings and research in Russian. May be repeated for up to 6 credits with different subtitles.

RUS 535 RUSSIAN VISUAL STUDIES (Subtitle required). (3)

This course is designed to introduce a variety of critical approaches used in the study of visual culture in Russian culture. The course may focus on various visual media such as film, image (in media, photography and propaganda), architecture and art. The course may focus on one particular aspect of visual culture or may compare visual genres or may compare visual media to other aspects of culture. Students taking the course for Russian credit will be required to read and do research in Russian. May be repeated for up to 6 credits with different subtitles.

RUS 545 RUSSIAN CULTURAL STUDIES (Subtitle required). (3)

An in-depth investigation of a particular facet of Russian culture. Topics may include aspects of folk or artistic culture, including visual arts, architectural, literary, theatrical, musical and/or social movements. Students taking the course for Russian credit will be required to read and research in Russian. May be repeated for up to 6 credits with different subtitles.

RUS 555 TOPICAL SEMINAR ON RUSSIAN STUDIES (Subtitle required). (3)

An interdisciplinary seminar in Russian Studies. Content may include comparative study of cultural phenomena or products or cross-disciplinary approaches to one topic. MCL/Russian major/minors taking the course for Russian credit will be required to read and research in Russian. May be repeated for up to 6 credits with different subtitles.

RUS 670 TOPICS IN RUSSIAN CULTURE AND FOLKLORE (Subtitle required). (3)

An investigation of Russian culture from the 1800's to the present, with emphasis on specific topics. May be repeated up to nine credits under different subtitles.

RUS 680 TOPICS IN RUSSIAN/SOVIET LITERATURE (Subtitle required). (3)

An in-depth examination of the classics of Russian and/or Soviet literature using original texts. Conducted in Russian. MATWL students will learn how to present Russian literary works in their language curriculum. May be repeated to a maximum of nine credits under different subtitles.

RUS 690 SPECIAL TOPICS IN RUSSIAN STUDIES (Subtitle required). (3)

An in-depth exploration of a particular literary, cultural, cinematic topic in Russian cultural history. Students will be expected to conduct part of their research using Russian materials. MAT students will learn how to synthesize content-based material into their language curriculum. Taught in Russian. May be repeated to a maximum of six credits under a different subtitle.

RUS 695 INDEPENDENT STUDY IN RUSSIAN STUDIES. (1-3)

Independent work devoted to specific problems or areas of interest in Russian language, literature, culture, or pedagogy. May be repeated to a maximum of six credits. Prereq: Consent of instructor.

SAG Sustainable Agriculture

SAG 101 INTRODUCTION TO SUSTAINABLE AGRICULTURE. (3)

Broad introduction to the environmental, economic and cultural components of sustainable food production and marketing. The definition, emergence, and growth of sustainable agriculture are discussed along with pertinent soil, crop and livestock management practices. Relationships between environmental stewardship, producer profitability, and community-based food systems are emphasized.

SAG 201 CULTURAL PERSPECTIVES ON SUSTAINABILITY. (3)

Examines cultural dimensions within the concept of sustainability through a close reading of texts addressing the relationship between people and nature. The application of cultural constructs used by individuals and societies in experiencing, interpreting and impacting the natural world are studied. Insights and observations of noted writers on environmental issues are discussed in relation to the interdependence between individuals, civilizations, and nature. Prereq: SAG 101. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

SAG 386 PLANT PRODUCTION SYSTEMS. (4)

In-depth analysis of the underlying principles of plant production systems. Successful strategies, based on application of the principles developed by lecture and laboratory activities, will be discussed in either agronomic or horticultural contexts. Special attention will be given to minimizing the environmental impact of the plant production techniques employed. Prereq: PLS 210 and PLS 366 or concurrently or consent of instructor. (Same as PLS 386.)

SAG 390 AGROECOLOGICAL. (3)

A general introduction to ecological principles and processes applied to agricultural ecosystems, including interactions between plants, soils, and animals on population, community and ecosystems scales. Course concepts will be applied to agricultural ecosystems that are of economic importance and ecological significance to the state of Kentucky. Emphasis will be placed on understanding how an ecological perspective can inform sustainable land management, the ecological basis for best management practices, and the interdisciplinary nature of agroecosystem management. (Same as PLS 390.)

SAG 395 RESEARCH IN SUSTAINABLE AGRICULTURE. (1-6)

Independent research related to some aspect of sustainable agriculture under the direction of

a research mentor. The research may be conducted in the College of Agriculture, some other unit on campus, or at an approved off-campus entity. Projects can include, but are not limited to, laboratory experiments, field-based research, and studies involving sociology, economics, anthropology, or related disciplines. There is a clear expectation that quantitative data collection and analysis will be an integral part of the research project. Prereq: Consent of instructor and approval of Learning Contract.

SAG 397 APPRENTICESHIP IN SUSTAINABLE AGRICULTURE. (3)

Provides students with hands-on experience operating an organic community supported agriculture produce farm and marketing its harvest in the local community. Students receive training across the full range of production and marketing activities under the guidance of the Course Coordinator and the professional staff of the farm management team. Prereq: SAG 101 and SAG 201, or consent of instructor.

SAG 490 INTEGRATION OF SUSTAINABLE AGRICULTURE PRINCIPLES. (3)

Examination of the complex scientific and social issues involving sustainable agriculture systems. Intensive experience in critical analysis of both quantitative and qualitative data will be provided, and students will consider substantive ethical issues and global themes. Students will evaluate the sustainability of different world agricultural systems and consider the potential implications. Prereq: Senior standing in College of Agriculture, SAG 201, 397.

SCI Science

SCI 101 SCIENTIFIC REASONING. (3)

A lecture/recitation course that stresses quantitative and logical reasoning skills that form the basis of science courses. The course will emphasize how to take verbally presented problems, recognize the mathematical patterns within them, and solve them. Lecture, one hour; recitation, four hours per week. Prereq: Math ACT greater than or equal to 18, or MA 108R, or Math Placement Test.

SEM Science, Technology, Engineering, and Mathematics

SEM 110 INTRODUCTION TO STEM EDUCATION. (2)

Through campus and school-based experiences, students will learn how to engage adolescents in learning mathematics, science, computer science, and engineering. This course will introduce the foundations of STEM Education, learning environments, curriculum and instruction, standards and assessment, as well as contemporary issues related to the field. The roles, responsibilities and daily life of teachers, schools and students will be examined. This course includes 30 hours of experience in the field.

SEM 328 TEACHING SCIENCE IN THE ELEMENTARY SCHOOL. (3)

A critical analysis of a variety of objectives, instructional materials and evaluation techniques for teaching elementary school science, with a special emphasis on grades K-4. Consideration will be given to addressing the individual needs of a diverse student population. Twenty hours of field experience are required in conjunction with EDC 322. Prereq: Admission to TEP and 12 hours of science. Coreq: EDC 322.

SEM 337 TEACHING MATHEMATICS IN ELEMENTARY SCHOOLS. (3)

Fundamental concepts of numbers, their relationships, geometry and other mathematics topics for children of grades K-4. Emphasis on use of concrete materials and the development of language, appropriate learning experiences, computational skills, and problem-solving abilities. Prereq: Admission to TEP and MA 202. Coreq: EDC 322.

SEM 345 METHODS OF TEACHING MIDDLE LEVEL MATHEMATICS. (3)

A study of theoretical models and methodological strategies for teaching arithmetic, informal geometry, and introductory algebra at the middle school level. The course will include a critical analysis of a variety of objectives, instructional materials and strategies, and evaluation techniques. Consideration will be given to addressing the individual needs of a diverse student population. This course is in conjunction with a four-week field experience, consisting of 2 two-week placements in the candidate's areas of content concentration. Prereq: Admission to Teacher Education, 12 hours in Mathematics, or permission of instructor.

SEM 348 METHODS OF TEACHING MIDDLE LEVEL SCIENCE. (3)

A study of theoretical models and methodological strategies for teaching science at the middle school level. This course will include a critical analysis of a variety of objectives, instructional materials and strategies, and evaluation techniques for middle school science. Special needs of individuals in a diverse middle school population are emphasized. This course is in conjunction with a four-week field experience, consisting of 2 two-week placements in the candidate's areas of content concentration. Prereq: Admission to Teacher Education, 12 hours in science, or permission of instructor.

SEM 421 STEM EDUCATION METHODS I. (3)

This course is intended to help future STEM Education teachers build a theoretical background and develop the practical skills needed to begin to develop themselves as effective teachers in the secondary classroom. Students will be introduced to, and gain hands-on experience with a variety of instructional materials appropriate for teaching STEM Education at the secondary

level. Students are encouraged to be creative and reflective in developing, implementing, and evaluating practices associated with teaching STEM concepts and skills. A strong emphasis is placed upon helping students to develop an understanding of the processes of inquiry teaching, the processes of science and mathematics, as well as a deep conceptual understanding of their respective content area(s). This is part I of a two course sequence. This course requires a minimum of 100 hours of observation. Prereq: EDP 202, SEM 110, Admission into STEM PLUS Program.

SEM 422 STEM EDUCATION METHODS II. (3)

This course, the second in a two course series, is intended to further develop the practical skills needed to develop effective STEM Education teachers in the secondary classroom. Students will build upon the knowledge and experience they gained in SEM 421 by delving deeper into students' content area(s) through field experiences, implementation of a variety of instructional materials, and development of curricula appropriate for teaching STEM Education at the secondary level. Students are encouraged to be creative and reflective in developing, implementing, and evaluating practices associated with teaching STEM concepts and skills. A strong emphasis is placed upon helping students to develop an understanding of the processes of inquiry teaching, the processes of science and mathematics, as well as a deep conceptual understanding of their respective content area(s). This is part II of a two course sequence. This course requires a minimum of 100 hours of observation. Prereq: SEM 421 and admission into the STEM PLUS Program.

SEM 423 ASSESSMENT IN STEM EDUCATION. (2)

The work in this course will help prepare future STEM teachers to create, examine, analyze, and critically utilize a variety of assessments found in K12 education. Specific focus will be given to present day assessment issues and will also include the following interconnected components in relation to assessment: equity (high expectations and strong support for all students); curriculum (coherent, focused, comprehensive, and culturally inclusive); teaching (focus on understanding what students know and need to learn); learning (active construction of new knowledge) and technology (incorporation of technological influences in the teaching-learning process). Prereq: Admission into STEM PLUS Program. Taken concurrently with SEM 435.

SEM 435 STEM STUDENT TEACHING IN THE SECONDARY SCHOOL. (10)

SEM 435 is a ten credit hour course taken concurrently with student teaching. The purpose of student teaching is to help student teachers continue to develop their knowledge, strategies, and the skills necessary in order to become successful and productive secondary teachers capable of being a leader in the profession. With the support of cooperating teachers in area schools, the course instructor, and university field supervisors, student teachers will apply the theories, methods, and techniques they have learned in the past in addition to what they will learn during their concurrent student teaching experiences. Prereq: Consent of Program Advisor and admission into STEM PLUS Program.

SEM 445 APPLICATIONS OF TEACHING MIDDLE LEVEL MATH. (3)

A study of theoretical models and methodological strategies for teaching mathematics at the middle school level. The course will include a critical analysis of equity issues in middle school mathematics, using manipulatives across the curriculum, and strategies for promoting adolescents' curiosity in mathematics. This course is in conjunction with an eight-week field experience. Prereq: SEM 345 or permission of instructor.

SEM 448 APPLICATIONS OF TEACHING MIDDLE LEVEL SCIENCE. (3)

A study of applied models and methodological strategies for teaching science at the middle school level. This course will include applications such as project based learning, engineering design-based science, interdisciplinary science, and other innovative methods for applying national and state science standards to real-world contexts. Special emphasis will be given to lesson study and peer teaching and evaluation. This course is in conjunction with an eight-week field experience. Prereq: SEM 348 or permission of instructor.

SEM 504 DESIGNING PROJECT-BASED ENVIRONMENTS IN STEM EDUCATION. (3)

SEM 504 will give students the opportunity to explore STEM contents, technologies, instructional strategies, and assessments necessary in designing and developing a research-based, interdisciplinary, project-enhanced environment. In SEM 504 students will experience, evaluate, and design interdisciplinary, project-enhanced environments within STEM classrooms. Although this course is designed as a distance course, there are some required face-to-face meetings.

SEM 575 SEE BLUE MATHEMATICS CLINIC. (3)

This course focuses on clinical techniques for working with K-12 students who are struggling and/or have disabilities in learning mathematics. It is a course designed to develop both theoretical understandings and operational skills in working with students who struggle in mathematics. Classroom applications of the techniques are discussed. This course is a combination of lecture and application with a student client.

SEM 603 CURRICULUM AND INSTRUCTION IN STEM EDUCATION. (3)

This course introduces the fundamental issues related to curriculum and instruction in STEM programs. Major topics addressed will include (but will not be limited to), defining STEM education, its curricula, purposes, and past and present social and political influences affecting the development and focus of STEM education. Additional discussion will address the stakeholders of STEM education that participate in the development, testing, implementation, and assessment of STEM curricula. A major focus of the course will be on the review of selected STEM curricular programs that reflect research-based "best practices" in STEM education.

SEM 604 HISTORY OF STEM EDUCATION. (3)

The History of STEM Education course will begin with researching the background and development of each individual component of STEM (i.e., Science, Technology, Engineering, and Mathematics) Education. This will follow with a historical comparison of these components highlighting their similarities as well as their differences. The course will conclude with a study of the entity, STEM Education, from the early 19th century America to the present focusing on reports and documents that have connected the Science, Technology, Engineering, and Mathematics disciplines and shaped current research and reform efforts.

SEM 610 TEACHER LEADERSHIP IN STEM EDUCATION. (3)

This course introduces fundamental issues related to classroom research, especially through the lens of action research, and what it means to be a teacher leader in the areas of STEM. Practical application will be the primary focus simultaneously with learning and learning to lead. Collaboration and group work is a hallmark of action research; students in this course will demonstrate their abilities to design, diagnose, plan, implement, observe, and reflect in cooperation with classmates. The various roles and skills necessary to be an effective researcher will be discussed, as well as important issues related to empowerment, contextualization, ethical considerations, and validity. In addition, students will examine action research through the lens of innovation and their role as a future teacher leader.

SEM 613 EFFECTIVE USE OF TECHNOLOGY FOR MODELING-BASED INQUIRY IN STEM EDUCATION. (3)

This course is designed to teach effective uses of educational technologies towards engagement in modeling-based inquiry in STEM Education. Students will learn the key components of facilitating modeling-based inquiry through their own building of accurate conceptual models of explanations of key STEM theories and underlying concepts. Utilizing technologies implemented in authentic STEM practice, students will learn how to facilitate pupils' use of technologies to allow them to make controlled observations, analyze data, recognize patterns, propose and revise their models of explanation, and communicate their models to their peers. Prereq: EDC 317 and/or EDC 607 or its equivalent or permission of instructor.

SEM 620 EQUITY IN STEM EDUCATION. (3)

This course is a seminar designed to study equity issues in the teaching and learning of STEM disciplines in P-20 education. A primary focus will be on enhancing teachers' ability to use research and reflection for learning and leading. Throughout the course the relationship between theory and practice will be emphasized in an attempt to understand some of the complexities and challenges in addressing issues of equity in mathematics learning and teaching. Prereq: Graduate standing.

SEM 631 MATHEMATICS PEDAGOGY IN THE SECONDARY SCHOOL. (0-3)

Through campus and school-based experiences, students will learn how to engage young people in learning mathematics and how to make decisions about planning instruction and develop assessment based on a sound knowledge base for applying content, materials, and methods (including educational technology) appropriate for high school students. May be repeated to a maximum of three credits. Lecture, 1-3 hours; laboratory, 3-6 hours per week. Prereq: Admission to the M.A./M.S. in Education (Initial Certification Option-Secondary Education).

SEM 634 SCIENCE PEDAGOGY IN THE SECONDARY SCHOOL. (0-3)

Through campus and school-based experiences, students will learn how to engage young people in learning science and how to make decisions about planning instruction and develop assessment based on a sound knowledge base for applying content, materials, and methods (including educational technology) appropriate for high school students. May be repeated to a maximum of three credits. Lecture, 1-3 hours; laboratory, 3-6 hours per week. Prereq: Admission to the M.A./M.S. in Education (Initial Certification Option-Secondary Education).

SEM 670 ADVANCED STUDY IN THE TEACHING OF ELEMENTARY SCHOOL MATHEMATICS. (3)

New developments in modern elementary mathematics for teachers in the elementary schools will be reviewed. Special emphasis will be given to a study of new teaching methods, application of published research, techniques and trends in mathematics in the elementary school. Prereq: Graduate standing.

SEM 674 ADVANCED STUDIES IN TEACHING ELEMENTARY SCHOOL SCIENCE. (3)

An advanced course for classroom teachers that focuses on implementation of instructional strategies and assessments for teaching elementary science. A review of contemporary research in teaching and learning science will be closely related to classroom instruction. Specific focus will be given to technology integration, assessment, and addressing the needs of diverse student populations. Prereq: Graduate standing.

SEM 701 HISTORY OF MATHEMATICS EDUCATION. (3)

A study of mathematics education from early 19th century America to the present focusing on forces that connected mathematics, psychology, psychometrics, sociology, and technology. Prereq: EPE 651 or permission of the instructor.

SEM 702 THEORETICAL FOUNDATIONS OF MATHEMATICS EDUCATION. (3)

A survey of constructivism, cognitive science, and sociological and anthropological perspectives as fundamental theories for mathematical learning, and an overview of research context where these theories guide inquiries. Prereq: EDP 610 (Theories of Learning) or consent of instructor. Many concepts and theories in SEM 702 are related to learning theories. Past students felt better prepared for SEM 702 after taking EDP 610.

SEM 703 ADVANCED RESEARCH IN MATHEMATICS EDUCATION. (3)

An advanced seminar focusing on current critical research issues in mathematics education, the way research impacts education policies and practices, various methodological pursuits of researchers, and theory building.

SEM 706 RESEARCH IN STEM EDUCATION. (3)

Students will have the opportunity to learn about the research paradigms guiding STEM education research throughout history with critical analysis of those most utilized across the modern STEM education research communities. Students will acquire knowledge and skills that allow them to develop a research proposal with explicit discussion of their research assumptions and that targets meaningful and timely research questions in STEM education. Prereq: EDL 651, or EDP/EPE 557 and EPE 570, or EDP/EPE 660 or permission of instructor.

SEM 708 ENGINEERING IN STEM EDUCATION. (3)

SEM 708 will introduce students to the field of engineering and give them the opportunity to explore engineering concepts, engineering design, different fields of engineering, engineering curricular materials for K-12 students, research on including engineering in K-12 education, and assessments necessary in designing and developing research-based, interdisciplinary, engineering-design curricula for K-12 students and teachers. In SEM 708 students will experience, evaluate, and design interdisciplinary, engineering design-based curricula to be used within STEM classrooms. Prereq: EDC 707 or permission of instructor.

SEM 746 SUBJECT AREA INSTRUCTION IN THE SECONDARY SCHOOL. (0-9)

Students will teach in their subject areas in the schools full-time, meet regularly to discuss teaching effectiveness and strategies for improvement and develop their professional portfolios. May be repeated to a maximum of nine credits. Lecture, 3-9 hours; laboratory, 6-18 hours per week. Prereq: The appropriate methods course in the subject area (SEM 631, EDC 632, EDC 633, SEM 634 or EDC 635). Admission to the M.A./M.S. in Education (Initial Certification Option-Secondary Education). (Same as EDC 746.)

SEM 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

SEM 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

SEM 770 SPECIAL TOPICS IN STEM EDUCATION (Subtitle required). (1-4)

This course is a seminar of topical offerings with variable topics in the study of philosophy, principles, trends and research associate with STEM Education. This seminar is designed to cover topical issues around current research and strategies in STEM Education as they relate to P-20 implementation. STEM Education is transdisciplinary and constantly changing. This course will address content specific and transdisciplinary issues within the context of new directives and initiatives. May be repeated to a maximum of twelve credits. Prereq: SEM 603 and/or SEM 706 or permission of instructor.

SEM 781 INDEPENDENT STUDY IN STEM EDUCATION. (1-3)

An independent study course for graduate students. May be repeated to a maximum of nine credits. Prereq: Consent of the Director of Graduate Studies and Program Advisor.

SOC Sociology

SOC 101 INTRODUCTION TO SOCIOLOGY. (3)

Introduction to the concepts and methods of sociology. Topics shall include socialization; group processes, social inequalities; social institutions; and social change. This course or its equivalent (RSO 102) serves as a prerequisite to all other Sociology courses. Students may not receive credit for both this course and RSO 102.

SOC 180 GLOBAL SOCIETIES IN COMPARATIVE PERSPECTIVE. (3)

A sociological study of the effects of globalization processes on contemporary societies. Particular emphasis is given to economic, political, and cultural globalization in relationship to two non-US societies (to be identified each semester by the instructor) as well as the Appalachian region of the United States.

SOC 235 INEQUALITIES IN SOCIETY. (3)

This course seeks to promote an understanding of inequalities in American society by considering them in the context of the social origins, development, and persistence of inequalities in the United States and other societies. Bases of inequality that may be considered include race/ethnicity, class/status, gender/sexuality, age, political and regional differences as these relate to politics, social justice, community engagement, and/or public policy. Prereq: SOC 101 or CLD 102. (Same as AAS 235.)

SOC 255 MEDICINE, HEALTH, AND SOCIETY. (3)

SOC 255 is an introduction to foundational social theories and concepts through the lens of health, healing, and medicine. Social science perspectives on health disparities across populations, how health and disease are defined and managed, and cultural experiences of illness provide a window into a broader understanding of social life. The course will focus on four major

social theories – social constructionism, symbolic interactionism, conflict theory, and functionalism. We will use these theoretical foundations and related core concepts to explore topics like physician-patient interaction and the social organization and distribution of health care. SOC 255 will also provide an introduction to social science research through critical analysis of original scholarly work and exposure to conducting, analyzing, and presenting one's own empirical findings. SOC 255 is ideal for those with career aspirations in medicine, nursing, or other health professions, and covers the sociology content included on the MCAT exam for pre-med students. This course also provides a critical foundation for those interested in learning about population health from the point of view of social science. Throughout the course, we will explicitly address the unique contributions of social science to a broader understanding of the etiology, treatment, experience, and consequences of illness and disease. (Same as HSP 255.)

SOC 299 INTRODUCTORY TOPICS IN SOCIOLOGY

(Subtitle required)

(3)

An introductory study of a selected topic in sociology.

SOC 302 SOCIOLOGICAL RESEARCH METHODS.

(3)

A focus on issues of social and behavioral research design, covering such topics as the relationship between theory and research, the ethics of social science research, units of analysis, identification of variables and statement of hypotheses, sampling, measurement, and modes of social observation. Required for majors. Prereq: Sociology majors and minors only; SOC 101 or CLD 102 or consent of instructor. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

SOC 303 QUANTITATIVE SOCIOLOGICAL ANALYSIS.

(3)

This course focuses on the use of quantitative analysis techniques and software in social and behavioral research, covering such topics as univariate and bivariate analysis, parameter estimation, and hypothesis testing. Required for majors. Prereq: SOC 302 or PSY 215.

SOC 304 CLASSICAL SOCIOLOGICAL THEORY.

(3)

A survey and analysis of theories of human social interaction and society from the nineteenth and early twentieth centuries. Works of theorists, such as Marx, Weber, Durkheim, Simmel, and Mead will be considered. Emphasis is on the development of sociology as a discipline. Required for majors.

SOC 305 CONTEMPORARY SOCIOLOGICAL THEORY.

(3)

A survey and analysis of the major schools of contemporary sociological theory. Works of major theorists are included. Emphasis is on the conceptual structure of the different theories and the way in which they are applied in contemporary sociological analysis. Prereq: SOC 304.

SOC 334 SOCIOLOGY OF FAMILIES.

(3)

A sociological study of the concepts, theories, issues, and research findings on families and the dynamics of family life, with an emphasis on the social context and diversity of families. Prereq: SOC 101 or CLD 102.

SOC 335 SOCIOLOGY OF GENDER.

(3)

A sociological study of gender as a socially and culturally constructed phenomenon. Topics shall include the intersection of gender and race/ethnicity and class; sexualities; gender and social movements; sociological theories concerning gender; feminist theory; and research on the relevance of gender to various subfields of sociology. Prereq: SOC 101 or CLD 102.

SOC 337 JUVENILE DELINQUENCY.

(3)

A study of the many social factors that shape juvenile delinquency and its control (including race, ethnicity, socioeconomic class, and gender). Students learn about past and present theories, research, and practices in order to address the issue of juvenile delinquency from a sociological perspective. Prereq: 6 hours of social science credit or consent of the instructor.

SOC 338 FAMILY VIOLENCE.

(3)

This course examines various forms of family violence, including intimate partner violence and child abuse, by reviewing the theoretical and empirical literature on these problems. The course material addresses such topics as risk and protective factors, and both legal and therapeutic responses to family violence.

SOC 339 INTRODUCTION TO CRIMINOLOGY.

(3)

A sociological study of the extent and nature of crime, delinquency, and more general deviant behavior. Topics may include the relationship between crime, deviance and law; measurement of crime and deviance; sociological theories of crime and deviance; and crime/deviance typologies. Prereq: SOC 101 or CLD 102.

SOC 340 COMMUNITY INTERACTION.

(3)

Examines community effects on group and individual behavior from the perspective of sociological social psychology. By focusing on individuals, individuals in groups, and groups, special emphasis is given to how community context shapes the attitudes, beliefs, and actions of individuals as well as their interactions with others. Prereq: CLD 102 or SOC 101 or consent of instructor. Primary registration access limited to SOC and CLD majors and remaining seats open during secondary registration. (Same as CLD 340.)

SOC 342 ORGANIZATIONS AND WORK IN SOCIETY.

(3)

A sociological study of the roles of formal organizations and workplaces in society, including consideration of their structures and processes. Topics may include contemporary issues in the sociology of organizations and work, including bureaucratic and alternative structures; opportunities for worker participation; the role of leadership and decision making; and the exercise of power in organizations. Prereq: SOC 101 or CLD 102.

SOC 343 POLITICAL SOCIOLOGY.

(3)

A sociological study of the causes and consequences of the distribution of power in society. Topics may include the means by which social movements challenge power; the political institutions in which power is exercised; and the relationship of the political arena to other social institutions and policies. Prereq: SOC 101 or CLD 102.

SOC 345 GLOBAL DIVISIONS OF LABOR:

WORK AND ORGANIZATIONS IN THE WORLD ECONOMY.

(3)

This course examines employment processes, unemployment in the global economy, and theories of the division of labor beginning with Marx, Durkheim, and Weber. This is followed by an analysis of jobs in the current global economy. First, it examines the processes by which jobs are created and destroyed through investment and various processes such as outsourcing and offshoring. Second, it looks at lean production and evidence-based medicine as forms of rationalization that emerged from scientific management and other processes. Third, it looks at how the Internet and robotics are transforming work. Prereq: SOC 101 or CLD 102 or consent of instructor.

SOC 347 INTERNATIONAL MIGRATION

IN GLOBAL PERSPECTIVE.

(3)

This course examines migration in a global perspective. It looks at immigration, emigration, and naturalization. It includes both legal and illegal immigration. All the major regions of the world are considered in a broad perspective, and then more specific forms of migration in specific countries are considered. Integration and naturalization processes are an important part of the mix. Both qualitative and quantitative evidence will be considered.

SOC 349 ECONOMIC SOCIOLOGY: CONSUMPTION, PRODUCTION

AND THE SOCIAL CONSTRUCTION OF MARKETS.

(3)

This course examines the field of economic sociology. It looks at consumption and production behavior in a variety of industries. It examines the labor market and how people are trained and find jobs. It looks at how people establish businesses and use investment to socially construct production. It looks at how markets are socially constructed and how market failures occur. Finally, it looks at the constructive role that government can play in controlling and promoting markets. Prereq: SOC 101 or CLD 102 or consent of instructor.

SOC 350 TOPICS IN SOCIOLOGY (Subtitle required).

(3)

Current research and conceptual developments in a selected topic or subfield of sociology. May be repeated to a maximum of six credits under different subtitles.

SOC 351 GLOBAL SOCIOLOGICAL TOPICS

(Subtitle required).

(3)

Current research and conceptual developments in a selected topic or subfield of sociology related to international issues or globalization. Topics will facilitate an understanding of the relationship between local and global processes. May be repeated to a maximum of six credits under different subtitles. Prereq: SOC 101 or CLD 102 or consent of instructor.

SOC 355 SOCIOLOGY OF HEALTH AND ILLNESS.

(3)

Who defines health and illness? Why is disease and premature death unequally distributed in society? What social forces cause individuals to get sick or stay healthy? How have changes in the medical profession, the health care system, and health policy affected treatment outcomes and illness experiences? This course addresses these questions through a presentation of important concepts and substantive issues the sociology of health and illness (or medical sociology), and an introduction to major classic and contemporary research in this area. We will compare and contrast sociological perspectives on health with the perspectives offered by biomedicine, psychiatry and allied disciplines. The course has two major sections: The first covers the social origins of illness—the social construction of illness and biomedical knowledge, social epidemiology, and social influences on personal experiences of illness. The second section covers social and institutional responses to illness and the impact of these on physician-patient interactions, health outcomes, and the distribution of disease. In this section we will examine the medical profession, the health care system, health policy, and the changing nature of these. Class sessions will emphasize group discussions and exercises based on original scholarly writings. Discussions and exercises are designed to encourage the development of analytic skills, recognition of the benefits of collaborative approaches to complex problems, and independent exploration of course material. (Same as PPH 355.)

SOC 360 ENVIRONMENTAL SOCIOLOGY.

(3)

A sociological study of the inter-relationship between human societies and the natural environment. Topics may include population growth; food systems; energy; climate change; risk perception; disasters; sustainability; social movements; and environmental justice. Prereq: SOC 101 or CLD 102. (Same as CLD 360.)

SOC 363 ENVIRONMENTAL JUSTICE.

(3)

This course focuses on environmental injustices and movements for social justice both within the United States and abroad. It examines the extent to which disadvantaged groups, including people of color, low-income communities, and people of the Global South, bear a disproportionate share of environmental toxins and hazards in the world. It also examines the emergence and characteristics of environmental justice movements grassroots and community-based efforts to deal with environmental threats. Prereq: SOC 101 or CLD 102 or consent of instructor.

SOC 380 GLOBALIZATION:

A CROSS-CULTURAL PERSPECTIVE.

(3)

A sociological study of how globalization processes affect development in various countries and world regions. Topics shall include development theory; comparative development processes and outcomes; and development policy options. (Same as CLD 380.)

SOC 395 INDEPENDENT WORK. (1-3)

Independent study of special topic under the supervision of faculty. Students must identify both a project topic and a sociology faculty mentor who has agreed to supervise this project. Students taking this course must be Sociology majors or minors and must have a 3.0 GPA in the department. A learning contract must be filed in the department in order to receive a grade for this course. May be repeated to a maximum of six credits. Prereq: SOC 101 or CLD 102, SOC major or minor, GPA of 3.0 or above in the department, consent of faculty mentor and learning contract.

SOC 399 PRACTICUM IN SOCIOLOGY. (1-12)

A service learning or internship experience in sociology under the supervision of a faculty member or instructor. May be repeated to a maximum of 12 credits. Maximum of six hours of SOC 399 will count toward Sociology Major requirements; maximum of 3 hours of SOC 399 will count toward Sociology Minor requirements. Pass/fail only. Prereq: SOC 101 or CLD 102, SOC major or minor, consent of instructor and learning contract.

SOC 420 SOCIOLOGY OF COMMUNITIES. (3)

A sociological study of issues relevant to communities. Topics may include: conceptual approaches to community; organizational and institutional linkages within and beyond the community; social inequality and social processes within communities such as social networks, social capital, power and decision-making, and social change. Prereq: SOC 101 or RSO 102 or CLD 102; and one of the following: SOC 302 or 304 or CLD 405; or consent of instructor. (Same as CLD 420.)

SOC 432 RACE AND ETHNIC RELATIONS. (3)

Analysis of relationships between racial and ethnic groups and the behavioral products thereof. Sources and consequences of prejudice and discrimination. Situation and prospects of minorities. Strategies of change and tension reduction. Prereq: Six hours of social science or consent of instructor. (Same as AAS 432.)

SOC 435 TOPICS IN SOCIAL INEQUALITIES (Subtitle required). (3)

A sociological study of topics relevant to social inequalities and stratification. May be repeated under different subtitles to a maximum of six credits. Prereq: Six hours of social science or consent of instructor. (Same as AAS 433.)

SOC 437 SOCIOLOGY OF LAW. (3)

This class explores the fundamental roles that law plays in organizing contemporary social life. It considers various ways of understanding law's complex presence in society: how law shapes and enables social interaction, how law constructs differences among people and their actions, how law mediates and enforces power relationships, and how law matters for the kind of society we have. Official legal institutions (courts) and actors (judges, police, lawyers, etc.) will be examined, as well as how law works as a complex array of norms, symbols, discourses, and practices. Prereq: SOC 339 or six hours of social science or consent of instructor.

SOC 438 CROSS-NATIONAL CRIME. (3)

The purpose of this course is to teach students how to describe and explain geographic and historical variations in the amounts and types of crime across countries and to understand contemporary transnational crime problems. Students will critically examine the data, methods, and theories used to measure and explain crime across nations and over time. They will learn how to make informed comparisons across a broad range of countries and world regions. Additionally, students will be introduced to the complexities of studying large-scale international and transnational crimes, like genocide. Prereq: SOC 101 or CLD 102 or consent of instructor.

SOC 439 TOPICS IN CRIME, LAW AND DEVIANCE (Subtitle required). (3)

A sociological study of a special topic central to the scientific study of crime, law, or deviance. May include such topics as deviant subcultures; substance use; social control of crime; sociology of law; and philosophies of punishment. May be repeated to a maximum of six credits under different subtitles. Prereq: Six hours of social science or consent of instructor.

SOC 440 COMMUNITY PROCESSES AND COMMUNICATION. (3)

This course examines the relationship between community organization and change and the media. Special emphasis is given to the place of media organizations in community structure, the effects of media on community processes, and how community members use the media. Prereq: CLD 102 or SOC 101 and CLD/SOC 340 or consent of instructor. Primary registration access limited to majors and remaining seats open during secondary registration. (Same as CLD 440.)

SOC 442 TOPICS IN WORK, ORGANIZATIONS AND ECONOMY (Subtitle required). (3)

A sociological study of selected topics related to organizations and work. Topics may include decision-making and leadership in organizations; environmental impacts of organizations; the future of unions and workplace democracy; and changes in labor markets. May be repeated to a maximum of six credits under different subtitles. Prereq: Six hours of social science or consent of instructor.

SOC 444 TOPICS IN POLITICAL SOCIOLOGY (Subtitle required). (3)

A sociological study of topics related to politics and government. Topics may include national and supra national government; citizenship; political parties; interest groups; social movements; and globalization. May be repeated to a maximum of six credits under different subtitles. Prereq: Six hours of social science or consent of instructor.

SOC 445 PUBLIC SOCIOLOGY. (3)

This course explores strategies for using sociological research tools to make a tangible impact on real-world social problems. It focuses on "Public Sociology" as a "brand" of sociology in which scholars seek to engage with the wider public by addressing social issues and seeking to share the results of their research with individuals and organizations who can utilize it for the solution of social problems. Students will be involved in a public sociology project as they fulfill course requirements. Prereq: SOC 302 or consent of instructor.

SOC 446 MASS INCARCERATION. (3)

This course examines the causes and consequences of mass imprisonment in the United States of America. Special attention is given to social context and political policies that led to the era of mass incarceration, the social factors that shape and describe the phenomenon of mass incarceration, and its consequences to society at the personal and societal levels. Prereq: Six hours of social science or consent of instructor.

SOC 447 DRUGS IN SOCIETY. (3)

This course examines the use and abuse of alcohol and other drugs through a sociological lens. Topics may include the intersection of substance use with race, class and gender; prevention; treatment; development of social policies; and theoretical explanations pertaining to the use of psychoactive substances in American society. Prereq: Six hours of social science or consent of instructor.

SOC 506 SOCIOLINGUISTICS. (3)

This course is an advanced survey of current areas of research in sociolinguistics. Topics include dialectology, language variation and change, interactional sociolinguistics, language and gender, bilingualism, and language contact. Prereq: LIN 221 or LIN 222 or SOC 101 or ANT 220. (Same as ANT/LIN 506.)

SOC 508 DISCOURSE ANALYSIS. (3)

This course is an introduction to the methods used in various approaches to discourse and textual analysis. The approaches examined include Speech Act Theory, Conversation Analysis, Ethnographic Discourse Analysis, Discourse Pragmatics, Interactional Sociolinguistics, Variation Analysis, and Critical Discourse Analysis. Special attention is given to practical experience analyzing both spoken and written discourse. Prereq: LIN 221 or LIN 222 or SOC 101 or ANT 220. (Same as LIN 508.)

SOC 517 RURAL SOCIOLOGY. (3)

A sociological study of the issues relevant to rural communities. Topics may include transformations in rural communities; the agrifood system; and the natural environment in the U.S. and the world. Prereq: Graduate student status; undergraduates with consent of instructor only. (Same as CLD 517.)

SOC 534 SOCIOLOGY OF APPALACHIA. (3)

A sociological study of selected social issues facing Appalachian communities, with an emphasis on placing regional political economy, society and culture in a global context. Prereq: Sociology, Anthropology or CLD senior major or minor; Appalachian Studies minor; graduate student status; or consent of instructor. (Same as ANT/CLD 534.)

SOC 539 ADVANCED TOPICS IN CRIME, LAW AND DEVIANCE (Subtitle required). (3)

A sociological study of a special topic central to the scientific study of crime, law or deviance. Topics may include deviant subcultures; substance use; social control of crime; sociology of law; and philosophies of punishment. May be repeated to a maximum of six credits under different subtitles. Prereq: Graduate student status; undergraduates with consent of instructor only.

SOC 541 ADVANCED TOPICS IN WORK, ORGANIZATIONS, AND ECONOMY (Subtitle required). (3)

A sociological study of selected topics related to work, organizations, and the economy. Topics may include economic sociology; sociology of occupations and professions; and sociology of organizational administration. Prereq: Graduate student status; undergraduates with consent of instructor only.

SOC 543 ADVANCED TOPICS IN POLITICAL SOCIOLOGY (Subtitle required). (3)

A sociological study of selected topics related to politics and government. Topics may include national and supra national government; citizenship; contestation; political parties, social movements; strategic protests; ideology; identity; and globalization. Prereq: Graduate student status; undergraduates with consent of instructor only.

SOC 550 ADVANCED TOPICS IN SOCIOLOGY (Subtitle required). (3)

A sociological study of topics, theories, or research findings from selected sociological subfield. May be repeated to a maximum of six credits under different subtopics. Prereq: Graduate student status; undergraduates with consent of instructor only.

SOC 565 INDEPENDENT WORK. (1-3)

Independent sociological study of a topic under the supervision of faculty. Students must identify both a project topic and a sociology faculty mentor who has agreed to supervise this project. A learning contract must be filed in the department in order to receive a grade for this course. May be repeated to a maximum of six credits. Prereq: Graduate student status; undergraduates with consent of instructor only.

SOC 603 SEMINAR IN TEACHING SOCIOLOGY. (1-3)

A pedagogical and professional development seminar to prepare skillful, effective sociology instructors. Prereq: Graduate standing in sociology or consent of instructor.

- SOC 610 PROSEMINAR IN COMPLEX ORGANIZATION. (3)**
A systematic examination of the sociological concepts, literature and current developments in the field of complex organizations. Prereq: Consent of instructor.
- SOC 622 TOPICS AND METHODS OF EVALUATION. (3)**
An examination of a subset of evaluation methods, topics, and problems. An introductory course in the area with minimal emphasis on quantitative methods. The course is designed to: provide a perspective from which evaluation studies may be viewed; and, to provide experiences for those who will learn from or conduct evaluations. Prereq: Consent of instructor, and a basic course in statistics or research. (Same as ANT/EDP/EPE 620.)
- SOC 630 PROSEMINAR IN DEVIANT BEHAVIOR. (3)**
A systematic examination of the sociological concepts, literature, and current developments in the field of deviant behavior. Prereq: Graduate standing; SOC 436 or equivalent.
- SOC 635 SEMINAR IN SOCIAL INEQUALITIES. (3)**
This course provides a graduate-level introduction to sociological theory and research on social inequalities and stratification. It includes both classic and contemporary works on topics such as political economy, the state, domination, democracy, work, poverty, welfare, resistance, class, race, ethnicities, and gender. The course serves as a foundational course for graduate students with interests in social inequalities, and is required for Sociology graduate students seeking a specialization in this area. Prereq: SOC 650 or SOC 651 or consent of instructor. (Same as AAS 635.)
- SOC 637 SOCIOCULTURAL DIMENSIONS OF ECONOMIC DEVELOPMENT. (3)**
Examination of social, cultural and economic conditions in lesser developed countries. Discussion of the various socioeconomic and cultural theories of change and developments, and of alternative policies for the world of the future. Considers the possible roles for social scientists in policy formulation and application. Prereq: Six graduate credits in social sciences or consent of instructor. (Same as ANT 637.)
- SOC 640 SCIENCE, AGRICULTURE, AND DEVELOPMENT. (3)**
An in-depth examination of the interrelations between science, agriculture, and development. Both domestic and international issues are explored. Prereq: Graduate standing in the social or agricultural sciences. (Same as ANT/CLD 640.)
- SOC 641 GENDER ISSUES IN DEVELOPMENT. (3)**
An examination of gender issues in domestic and international development. Prereq: Graduate standing in the social or agricultural sciences or permission of the instructor. (Same as ANT 641.)
- SOC 642 THE SOCIOLOGY OF WORK, OCCUPATIONS AND LABOR MARKETS. (3)**
This course examines the theories of work and occupations; the industrial structure of the labor force, the nature of mental and manual labor; the structure of labor markets including underemployment, unemployment, and segmentation; occupational mobility and status attainment; worker resistance and informal groups; worker participation and teamwork; labor and management relations; and state and national legislation regarding work, conflict, safety, and discrimination. Prereq: Graduate standing in sociology or other graduate department.
- SOC 645 TOPICS IN POLITICAL SOCIOLOGY. (3)**
This course examines how states, capital, and other relevant social groups interact to produce new or stabilize old frameworks for work or other aspects of society. Its topics may include many different areas including: employee representation; health and safety issues; race and gender discrimination; corporate relocation and the international division of labor. No matter what topic chosen for the course, the basic aspects of political sociology including pluralist, elite, neo-corporatist, and citizenship theories will be covered. Prereq: Graduate standing in sociology or other graduate department.
- SOC 646 SOCIAL MOVEMENTS AND SOCIAL CHANGE. (3)**
This seminar focuses on literature pertaining to collective, extra-institutional efforts to form new or maintain old forms of social order in the United States and other countries. While specific content might vary in response to instructors' interests and department demands, attention will be given to such issues as movement emergence, maintenance, and transformation, labor and resource mobilization, social networks, organization cultures, movement identities and ideologies, social problems construction, strategies and tactics development, as well as the relative success of social movement activities. The seminar can include illustrative material from a variety of social movements and counter-movements (e.g., political, lifestyle, religious, etc.) Prereq: Graduate standing in sociology or other graduate department.
- SOC 650 CONCEPTS AND THEORIES IN SOCIOLOGY. (3)**
Consideration of central conceptual issues underlying the construction of various sociological theories and their explanatory frameworks. A systematic exploration of the development and application of central conceptual frameworks of the discipline. Prereq: Consent of instructor.
- SOC 651 CLASSICAL SOCIOLOGICAL THEORY. (3)**
Intensive examination of the ideas and continuing significance of leading nineteenth century sociological theorists. The work of Marx, Weber, Durkheim, and Simmel or Mead is given particular attention. Discussion concerns the contents of their writings, the sociohistorical context in which they were developed, and their applicability to contemporary society. Prereq: Consent of instructor.
- SOC 653 FAMILY THEORY. (3)**
A survey and critical evaluation of family macro and micro theories. The course will include (a) a historical perspective on the development of family theory; (b) the prevalent macro theories/conceptual frameworks in use in the field; and (c) current trends in the development of micro, or middle-range, family theories. Prereq: FAM 652. (Same as FAM 653.)
- SOC 661 SOCIOLOGY OF EDUCATION. (3)**
A study of schooling and education using basic analytic paradigms of sociology. Emphasis on schools as formal organizations and education in a changing, technologically oriented and stratified society. Prereq: SOC 101 or equivalent. (Same as EPE 661.)
- SOC 665 PROGRAM DEVELOPMENT AND EVALUATION. (3)**
Course is designed to help students design, implement, and evaluate educational and social programs using a logic-based framework. (Same as CLD 665.)
- SOC 675 THEORETICAL FOUNDATIONS OF COMMUNICATION AND COMMUNITY. (3)**
This course is designed to explore the dynamics of community development and leadership communication within both geographic-bounded communities and communities of taste. (Same as CLD 675.)
- SOC 680 SOCIAL INVESTIGATION. (2)**
This course is a core research design course in the Sociology graduate program. The primary objectives are to: (a) help you understand the process of social science research and (b) build your skills to develop an original research project in sociology or related social science disciplines. The course is organized around "sociology in action", covering such topics as developing effective research questions, selecting appropriate research methods and theoretical framing, writing and revising a proposal, acquiring an IRB approval for your research, and developing and managing your research budget and time. Prereq: Graduate student standing, or consent of instructor.
- SOC 681 RESEARCH DESIGN AND ANALYSIS. (3)**
Problem definition and delimitation, design appropriate to problem and data, and selection of appropriate analysis techniques; critical examination of representative research studies. Prereq: Elementary statistics.
- SOC 682 SPECIAL TOPICS IN ADVANCED SOCIOLOGICAL METHODS. (1-3)**
A focused treatment of one or more issues, topics, or problems in sociological methods such as time-series analysis, causal analysis, participant observation, conduct of experiments, sociohistorical methods, scale construction, etc. May be repeated to a maximum of nine credits. Prereq: SOC 681 or equivalent.
- SOC 684 FARMING SYSTEMS RESEARCH METHODS. (3)**
A critical analysis of the concepts, methods, and practices of farming systems research. Design and carry out an FSR project. Prereq: Graduate standing in the social or agricultural sciences. (Same as ANT 684.)
- SOC 685 COMMUNITY DEVELOPMENT THEORY AND PRACTICE. (3)**
This course examines the application of our conceptual understanding of community and organizational dynamics to community development that builds upon assets and encourages local involvement. (Same as CLD 685.)
- SOC 691 SOCIOLOGY OF FOOD AND AGRICULTURE. (3)**
This seminar will analyze the transformation of agriculture and the food system in the historical context of increased globalization. Emphasis is given to key historical transitions, changing social relations surrounding production and consumption of food, and shifts in regulations and policy at the local, national, and/or international levels. Such emphases provide a framework for understanding the historical roots and future prospects for the socioeconomic problems confronting contemporary U.S. and global agriculture and food economies. Prereq: Graduate standing, or consent of instructor. (Same as AEC/CLD 691.)
- SOC 730 SPECIAL TOPICS IN DEVIANT BEHAVIOR. (1-3)**
A focused treatment of one or more issues, topics, or problems in the field of deviant behavior such as delinquency, sociology of law, criminal justice and corrections, radical criminology, or methodological issues in deviance research. May be repeated to a maximum of nine credits. Prereq: SOC 630 or equivalent or consent of instructor.
- SOC 735 TOPICAL SEMINAR IN SOCIAL INEQUALITIES. (3)**
Advanced study of topics of current importance in the study of social inequalities and stratification. May be repeated under different subtitles to a maximum of 12 credits. Prereq: SOC 635 or consent of instructor.
- SOC 737 CULTURE, ENVIRONMENT AND DEVELOPMENT. (3)**
This seminar explores the interrelationships between social processes, development and the environment. It provides the graduate student with the necessary theoretical and analytical tools to examine the social and cultural processes of environmental degradation and change. Topics include political ecology, health impacts of development, deforestation, resource tenure systems, environmental grassroots movements and large-scale development organizations. Prereq: Consent of instructor. (Same as ANT 736.)
- SOC 748 MASTER'S THESIS RESEARCH. (0)**
Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

Course Descriptions

SOC 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

SOC 751 CONTEMPORARY SOCIOLOGICAL THEORY. (3)

A survey of major theoretical perspectives in modern sociology, focusing on twentieth century developments in European and American sociological theory. The principal contributions of selected theorists are considered and their role in the establishment of contemporary sociology is assessed. Prereq: SOC 651 or consent of instructor.

SOC 752 SEMINAR IN FAMILY THEORY CONSTRUCTION. (3)

An advanced seminar focusing on the definition, evaluation and construction of family theory. Inductive and deductive theory construction strategies are surveyed, evaluated and applied. Prereq: FAM 652.

SOC 766 CONCEPTS IN MEDICAL SOCIOLOGY. (3)

A review of sociological concepts and methods which have been applied to the study of health and medicine; the contributions of medical sociology to general sociological theory and to concepts and research on health-related problems of society. Prereq: Consent of instructor. (Same as BSC 766.)

SOC 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

SOC 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

SOC 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

SOC 772 TOPICAL SEMINAR IN SOCIOLOGY. (1-3)

Advanced study of topics of current importance in sociology, such as structural strain and social change, game theory, decision processes, communication and power structure. May be repeated under different subtitles to a maximum of 12 credits. Prereq: At least nine hours in the social sciences, preferably in sociology.

SOC 773 TOPICAL SEMINAR. (3)

Analysis of topics of scientific interest in rural sociology, selected from such fields as the following: criticism of research; sociological factors in land use; migration; rural social ecology of the South; highland societies. May be repeated to a maximum of six credits.

SOC 776 SEMINAR IN DEPENDENCY BEHAVIOR. (3)

The course is designed to explore theories of dependency behavior by examining the concept of dependency as it can be applied to the study of various phenomena including alcohol use and abuse; dependence on other psychoactive substances; institutional dependency; dependency in work settings; and poverty and welfare. Prereq: Consent of instructor. (Same as ANT/PSY/BSC 776.)

SOC 777 SEMINAR IN MENTAL ILLNESS CONCEPTS, RESEARCH AND POLICY. (3)

Advanced study of contemporary concepts of mental health and mental illness, and their historical development; major forms of response to mental illness. Prereq: Consent of instructor. (Same as BSC 777.)

SOC 779 TOPICAL SEMINAR IN SOCIAL PSYCHOLOGY. (3)

Each semester some topic in the field of social psychology such as attitudes and beliefs, structure and function of social groups, social determinants of behavior, leadership, and morale will be studied intensively. May be repeated to a maximum of six credits. (Same as PSY 779.)

SOC 780 SPECIAL PROBLEMS IN SOCIOLOGY. (1-6)

May be repeated to a maximum of 10 credits.

SOC 781 QUANTITATIVE DATA ANALYSIS II. (3)

This intermediate statistics course emphasizes the fundamentals of multivariate regression. The goal is to develop a foundational toolkit to model a variety of dependent variables. The course will teach students how to make decisions about how to model data, how to estimate equations, and how to solve common problems with multivariate regressions. This is an applied course that will utilize Stata to analyze quantitative social science data. Prereq: SOC 681, PS 572 or consent of the instructor.

SOC 785 COMPARATIVE HEALTH CARE SYSTEMS. (3)

This seminar will focus on concepts, issues, and research pertaining to health care systems in comparative perspective. It will deal with the following questions. (1) What are the core analytical dimensions of a health care system? (2) How do health care systems connect with the other institutional domains of a society, with its value-system, and with its major cultural and historical trends? and (3) Within the health care system, how are the main constituents of modern medicine related to each other? Prereq: Consent of instructor. (Same as BSC 785.)

SOC 790 RESEARCH IN RURAL SOCIOLOGY. (1-3)

Individual graduate research with correlated study of rural social research types and methods. May be repeated for a maximum of six credits.

SOC 792 RESEARCH IN SOCIOLOGY. (1-6)

Individual research and reading in particular fields of sociology, under staff supervision. Open to advanced students who are prepared for intensive study beyond that offered in regular classes in each field. May be repeated to a maximum of 10 hours.

SOC 797 COMMUNITY DEVELOPMENT PRACTICUM. (1-9)

Supervised experiences in the application of sociological concepts and techniques to problems of program development in a community or state agency, organization, or department. Learning contract required. May be repeated to a maximum of 9 credits. Prereq: Approval of the Director of the Community Development Program.

SPA

Hispanic Studies

SPA 011 SPANISH READING FOR GRADUATE STUDENTS. (3)

Designed for those graduate students who wish to acquire a rapid reading knowledge of Spanish. Emphasis on rapid vocabulary building, the Spanish idiom, and the verb systems. Lecture, three hours.

SPA 101 ELEMENTARY SPANISH I (spoken approach). (4)

This course is designed to introduce basic modes of communication in Spanish. The emphasis is on everyday language which the students will learn by applying essential grammatical structures to vocabulary. Both listening and reading comprehension are stressed. The textbook provides instructional assignments and self-correctional exercises. Not open to students who have credit for SPA 141.

SPA 102 ELEMENTARY SPANISH II (spoken approach). (4)

A continuation of SPA 101. Not open to students who have credit for SPA 142. Prereq: SPA 101 or consent of the department and placement test.

SPA 103 HIGH BEGINNER SPANISH. (3)

This course is designed to expand upon the students' already existing knowledge of Spanish in order to prepare them for intermediate level courses. The textbook and supplementary material will develop students' abilities in the four basic skills of language learning (speaking, listening, reading and writing). Prereq: Placement exam. Contact department office at (859) 257-1565 to make appointment for placement test.

SPA 111 THE HISPANIC CARIBBEAN. (3)

This course will examine the culture, literature, arts and historical issues of the Hispanic Caribbean—Cuba, Puerto Rico and the Dominican Republic—from Columbus' arrival to the contemporary period. The students will gain understanding of the convergence of the three ethnic groups that make up this region—the indigenous population, the European colonizers and the enslaved Africans—frameworks that help us understand the Hispanic Caribbean and its place in a global society and the unique identity of the Hispanic Caribbean in the context of Latin America; music, emigration and the U.S. Caribbean Hispanic communities. This UK Core course will be taught in English and will consist of readings, lectures, multi-media resources, writing assignments, student presentations and small discussion groups.

SPA 151 SPANISH FOR HEALTH PROFESSIONALS. (3)

The course will teach Spanish terminology and basic grammar related to medical patients, including vocabulary for diagnosis and treatment. Prereq: Prior college or high school Spanish or other experience with the Spanish language roughly equivalent to one semester of college study.

SPA 201 INTERMEDIATE SPANISH III (spoken approach). (3)

Review and reinforcement of grammatical and phonological patterns. Emphasis will be given to developing reading, listening and speaking skills based on contemporary texts. Not open to students who have credit for SPA 241. Prereq: SPA 102 or consent of department and placement test.

SPA 202 INTERMEDIATE SPANISH IV (spoken approach). (3)

Continuation of SPA 201. Not open to students who have credit for SPA 242. Prereq: SPA 201 or consent of department and placement test.

SPA 203 HIGH INTERMEDIATE SPANISH. (3)

This course is designed to advance students' knowledge of Spanish at the intermediate level by fine-tuning the skills of reading, speaking, listening, and writing. The goal of the course will be to focus on useful vocabulary, to practice functional grammar, to further explore cross-cultural analysis and to develop students' communicative competence in Spanish. Not open to Students from SPA 102 or 103. This course is designed for students' transition directly from high school Spanish to second-year college Spanish. Prereq: Placement exam. Contact department office at (859) 257-1565 to make appointment for placement test.

SPA 205 SPANISH FOR BILINGUAL STUDENTS. (3)

This course is the entry level for the 'Spanish for Bilingual Students' track. It will cater to the specific academic and communicative needs of two types of students: those described as 'heritage speakers/learners' and those who are 'advanced non-native speaker of Spanish'. This course is exclusively designed for these students and its purpose is to build on the students' existence competence of the native language and to further develop oral, written, reading, and cultural competence for use in different communicative situations. Prereq: Placement exam and oral interview.

SPA 208 U.S. LATINO CULTURE AND POLITICS. (3)

This course studies U.S. Latino history and culture, with an emphasis on the evolution of the politics of immigration and the use of Spanish in the U.S. These broader issues will be studied with the express intent of determining what they mean for central Kentucky.

SPA 210 SPANISH GRAMMAR AND SYNTAX. (3)

Introduction to advanced Spanish grammar and syntax and development of Spanish vocabulary and writing skills. Concurrent enrollment in SPA 211 is encouraged. Prereq: SPA 202, SPA 203 or equivalent.

SPA 211 INTERMEDIATE SPANISH CONVERSATION. (3)

Oral-aural practice in the spoken language. Special emphasis placed on the acquisition of idioms and vocabulary. Prereq: SPA 202, 203 or equivalent or consent of chair.

SPA 215 WRITTEN SPANISH FOR BILINGUAL STUDENTS. (3)

This course builds upon the pedagogical basis of SPA 205. It is exclusively designed for bilingual speakers and its purpose is to further refine reading, lexical, and grammatical skills through intensive writing practice in contexts that are meaningful to these speakers. This course will be taught entirely in Spanish. SPA 215 is the equivalent of 210 and 211 and fulfills the pre-major course requirements. Students taking 203 should refrain from taking this course. Prereq: Approve SPA 205 with a grade of **B** or higher (or placement exam and oral interview).

SPA 262 HISPANIC LITERATURES IN TRANSLATION (Subtitle required). (3)

This course examines particular authors, periods, regions, cultural events, or movements from Spain and Latin America. Special attention will be paid to links between literature and culture, politics and society through reading, discussion, and writing assignments to be conducted in English. Course may be repeated under different titles for a maximum of six credits. Prereq: WRD 110 and WRD 111 or CIS 110 and CIS 111.

SPA 300 CONTACT ZONES: CULTIVATING INTERCULTURAL COMPETENCE. (3)

This course aims to help students acquire skills and knowledge needed to promote understanding of individuals/groups from diverse backgrounds, without reinforcing stereotypes in the name of "cultural difference." Toward this end, this course will (1) utilize, as a guide/lead, the concept of "contact zones," zones of exchange that divide but simultaneously connect "us" and "them"; and (2) have each student conduct a semester-long ethnographic project concerning the contact zone. Prereq: Students must have completed 30 hours of course work and completed the UK Core Composition and Communication I and II requirement before enrolling in MCL/SPA 300. (Same as MCL 300.) This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

SPA 302 SPANISH FOR BUSINESS PROFESSIONALS. (3)

This course prepares business and Spanish minors/majors for successful communication in the Hispanic commercial world by building up on their existing knowledge and emphasizing practical, real-life use of oral and written Spanish. This course is designed to introduce students to essential business terminology and language situations in common business contexts, reinforcing strategies for understanding, interpreting, and responding to new information. This course also helps the student to be alert to the importance of cultural awareness in doing business in Spanish-speaking countries or with Hispanics in the United States. Prereq: SPA 210 and 211, or 215.

SPA 310 SPANISH COMPOSITION THROUGH TEXTUAL ANALYSIS. (3)

Critical readings and interpretation of texts in Spanish. Text may include literary, political, sociological, and cultural documents. Emphasis on mastery of written Spanish. This course is required of all majors. Prereq: SPA 210 and 211, or 215 with a B or better or consent of the instructor.

SPA 312 CIVILIZATION OF SPAIN. (3)

This course is designed to acquaint students with Spain's intellectual, cultural and historical development. Conducted primarily in Spanish. Prereq: SPA 210 and 211, or 215, or consent of instructor.

SPA 313 ADVANCED SPANISH LANGUAGE. (3)

A course designed to practice language skills at an advanced level. Preparation of oral and written presentations in Spanish. Selected readings will be treated for their language content. Conducted primarily in Spanish. Prereq: SPA 210 and 211, or 215, and a 300-level Spanish course.

SPA 314 CIVILIZATION OF SPANISH AMERICA. (3)

This course is designed to acquaint students with Spanish America's intellectual, cultural and historical development. Conducted primarily in Spanish. Prereq: SPA 210 and 211, or 215, or consent of the instructor.

SPA 315 INTRODUCTION TO HISPANIC LITERATURE. (3)

This course provides students with a basic background for reading Hispanic literature and focuses on the development of a method for reading critically. Students will identify and discuss themes, plots and structure and poetic tropes such as symbols, metaphors, and allegory. Lecture and discussion in Spanish. Prereq: SPA 210 and 211, or 215, or consent of the instructor.

SPA 320 LITERATURE, LIFE AND THOUGHT OF SPAIN. (3)

A study of the literature that reflects the life and thought of Spain from the Middle Ages to the present. Lecture and discussion in Spanish. Prereq: SPA 210 and 211, or 215, or consent of the instructor.

SPA 322 LITERATURE, LIFE AND THOUGHT OF SPANISH AMERICA. (3)

A study of the literature that reflects the life and thought of Spanish America from the Colonial period to the present. Lecture and discussion in Spanish. Prereq: SPA 210 and 211, or 215, or consent of the instructor.

SPA 323 INTRODUCTION TO SPANISH TRANSLATION. (3)

Allows students to deepen their understanding of Spanish and English as they consider how best to translate structures, words, text, and discourse styles unique to each respective language while simultaneously acquiring a valuable and highly marketable skill. Translation tasks will be primarily from Spanish to English. Prereq: SPA 310 completed (no concurrent enrollment). This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

SPA 324 THE THEATRE IN SPAIN AND SPANISH AMERICA. (3)

A study of the theatre in Spain and Spanish America, stressing developments in the dramatic arts as seen in the works of major dramatists of the Golden Age, Modern Period, and twentieth century Spanish America. Conducted primarily in Spanish. Prereq: SPA 210 and 211, or 215.

SPA 330 SPANISH AND GLOBALIZATION. (3)

This course examines "globalization" and its effect on a world language like Spanish. We will trace some of the debates and discussions surrounding language issues in a global era, attempting to identify those aspects of globalization of particular interest when it comes to explaining language behavior. We will seek to identify some of the key agents acting as the forces of globalization on language processes and will discuss the nature of this relationship. We will explore how far any discussion and analysis of globalization and world languages are of any particular and specific relevance to an understanding of the case of Spanish and the languages of what is commonly referred to as the Spanish-speaking world.

SPA 332 SPANISH AND LATIN AMERICAN BUSINESS ENVIRONMENTS. (3)

This course presents a balanced analysis of the economic, social, and political events in the past years that have shaped the business and investment climate in Spain and Latin America. The goal is to increase student awareness of and familiarity with the role played by the incorporation of Spain in the European Union, and the implementation of Free Trade in current Latin American economies. The student who successfully completes this course will not only better understand these socio-economic phenomena but will also hone their communicative and argumentative skills in Spanish. Prereq: SPA 310 and 302.

SPA 350 HISPANIC CITIES (Subtitle required). (3)

This course is designed to provide students with a basic knowledge of the historical, cultural, and social development of modern Hispanic cities. Contemporary aspects of cities such as their rise to prominence, their role in nation formation, and their representation in a variety of cultural forms are some of the topics to be explored. Prereq: SPA 210 and SPA 211, or consent of instructor.

SPA 361 LATIN AMERICAN LITERATURE IN TRANSLATION (Subtitle required). (3)

This course examines particular authors, periods, regions, cultural events, or movements from Latin America. Special attention will be paid to links between literature and culture, politics and society through reading, discussion, and writing assignments to be conducted in English. Course may be repeated under different titles to a maximum of six credits. (Same as LAS 361.)

SPA 371 LATIN AMERICAN CINEMA: (Subtitle required). (3)

An introduction to the analysis and interpretation of cinema in general and Latin American cinema in particular. Open to majors and non-majors. The course will focus on films from the Latin American schools of cinema which will be studied in their social, political, and cultural context and introduce students to basic critical vocabulary. Viewing of films (with English subtitles) outside of class is required. Class lectures in English; sections in English or Spanish depending on the language ability of student. Course cannot be repeated.

SPA 372 SPANISH CINEMA: (Subtitle required). (3)

An introduction to the analysis and interpretation of cinema in general and Spanish cinema in particular. Open to majors and non-majors. The course will focus on films from the Spanish schools of cinema which will be studied in their social, political and cultural context and introduce students to basic critical vocabulary. Viewing of films (with English subtitles) outside of class is required. Class lectures in English; sections in English or Spanish depending on the language ability of student. Course cannot be repeated.

SPA 397 INDEPENDENT WORK IN SPANISH. (3)

May be repeated once. Prereq: Major and standing of 3.0 in the department.

SPA 399 FIELD BASED/COMMUNITY BASED EDUCATION. (1-15)

A community- or field-based experience in Spanish under the supervision of a faculty member. Approval of the Arts and Sciences dean required for credits above six per semester. May be repeated to a maximum of 15 credits. Pass-fail only. Prereq: Permission of the instructor and departmental chairperson; completion of departmental learning agreement.

SPA 400 SPECIAL TOPICS IN HISPANIC LITERATURES AND LANGUAGES (Subtitle required). (3)

Detailed investigation of a given topic, author, or theme. Topics announced the preceding semester. Conducted in Spanish. May be repeated to a maximum of six credits when identified by different subtitles. Prereq: One 300-level Spanish literature course.

SPA 410 ADVANCED SPANISH GRAMMAR. (3)

The purpose of this course is to discuss from a theoretical and practical perspective the most relevant grammatical aspects of contemporary Spanish, such as: sentence structure, most frequently used verbal tenses and aspects, syllable structure, agreement (subject-verb; noun and noun modifiers), etc. This course is aimed to develop in the students interest and skills for research in Spanish grammar through searching and compiling digital linguistic corpora. Prereq: SPA 310 and other 300 level course.

SPA 413 SPANISH PHONETICS. (3)

This course is designed to emphasize early attention to pronunciation and oral fluency by introducing students to Spanish phonetics. It provides intensive practice in oral Spanish so that students increase and maintain oral fluency in Spanish by emphasizing refinement of intonation and pronunciation. The class will be conducted entirely in Spanish. Prereq: SPA 310 and other 300 level course.

SPA 420 SPANISH IN THE WORLD. (3)

Offers a diachronical overview of the importance of the Spanish language. Connects historical facts to the development of Spanish to a world language. Investigates the role of Spanish in the international organizations and in media. Prereq: SPA 310 and one more 300 level course.

SPA 423 ADVANCED SPANISH TRANSLATION. (3)

As a follow-up to SPA 323, students will perform translations from English to Spanish and will also engage in interpretation. Students will deepen their understanding of basic translation theory and will receive orientation as to professional certifications and employment opportunities. Prereq: SPA 323; no concurrent enrollment.

SPA 424 MEDIEVAL AND EARLY MODERN SPANISH STUDIES (Subtitle required). (3)

Readings and analysis of texts from and about Medieval and Early Modern Spain, with emphasis on cultural production within social and historical contexts. May be repeated to a maximum of 6 credits with topic change. Prereq: SPA 310. Permission of instructor for students who did not receive B or better in SPA 310.

SPA 430 INTRODUCTION TO SPANISH LINGUISTICS. (3)

Offers an introduction to Spanish linguistics; establishes the basis for future application of linguistic principles. Provides students with a level of knowledge that enables them to make connections between the structure of Spanish and relevant issues in contemporary Hispanic linguistics. Prereq: SPA 310 or one more 300 level course.

SPA 432 18TH AND 19TH CENTURY SPANISH STUDIES (Subtitle required). (3)

Reading and analysis of Spanish literary and cultural works from the 18th and 19th century. The course may cover multiple genres, authors, periods, regions, or topics. Course may be repeated under different titles to a maximum of six credits. Prereq: SPA 310. Permission of instructor for students who did not receive a B or better in SPA 310.

SPA 434 SPANISH LITERATURE OF THE 20TH CENTURY. (3)

A study of the works of the Generation of 1898 and representative works of recent writers. Conducted in Spanish. Prereq: One 300-level Spanish literature course.

SPA 438G LITERATURE OF SOCIAL PROTEST IN SPANISH AMERICA. (3)

Analysis and study of the use of sociopolitical elements in selected works by Spanish-American poets, novelists and dramatists. Conducted in Spanish. Prereq: One 300-level Spanish literature course.

SPA 444 20TH AND 21ST CENTURY SPANISH STUDIES (Subtitle required). (3)

Reading and analysis of Spanish literary and cultural works from the 20th and 21st century. The course may cover multiple genres, authors, periods, regions, or topics. Course may be repeated under different titles to a maximum of six credits. Prereq: SPA 310. Permission of instructor for students who did not receive a B or better in SPA 310.

SPA 454 COLONIALISM AND 19TH CENTURY SPANISH-AMERICAN STUDIES (Subtitle required). (3)

A topics course in Latin American literature and culture from the colonial period through the 19th century. Special emphasis on the interaction between literature, historical and social developments. Taught in Spanish. May be repeated to a maximum of 6 credits with topic change. Prereq: SPA 310. Permission of instructor for students who did not receive a B or better in SPA 310.

SPA 464 CONTEMPORARY SPANISH-AMERICAN STUDIES (Subtitle required). (3)

A topics course in 20th century Latin American literature and culture. Special emphasis on the interaction between literature, historical and social developments and popular culture. Taught in Spanish. May be repeated to a maximum of 6 credits with topic change. Prereq: SPA 310. Permission of instructor for students who did not receive a B or better in SPA 310.

SPA 474 TOPICS IN HISPANIC STUDIES (Subtitle required). (3)

Reading and analysis of Hispanic literature and culture organized by topics. May cover multiple genres, authors, periods, regions or topics. May be repeated to a maximum of 6 credits with topic change. Prereq: SPA 310. Permission of instructor for students who did not receive a B or better in SPA 310.

SPA 480 HISPANIC KENTUCKY. (3)

The study of U.S. Latino history, with primary emphasis on the evolution of the politics of

immigration and Spanish in the U.S. These issues will be studied with the primary intent of determining what they mean to Central Kentucky. This course is conducted in Spanish and incorporates a service learning component which is finalized the first week of the semester. Prereq: SPA 310 or consent of instructor.

SPA 497 HISPANIC STUDIES HONORS THESIS. (3)

An independent research course leading to an undergraduate thesis in Hispanic Studies (research thesis, technology-based project, translation project) for majors in the Department of Hispanic Studies to be supervised by one/two faculty member(s) on topics dealing with Spanish and/or Latin American studies (literature, culture, civilization, visual studies), Hispanic Linguistics, or the teaching of Spanish. Prereq: 15/18 hours of Spanish courses at the 300+ level.

SPA 501 SPANISH PHONETICS, PRONUNCIATION AND PHONEMICS. (3)

Introduction to Spanish descriptive linguistics with intensive study of variant speech sounds and established norms in the major cultural areas of the Hispanic world with discussions of the theory and isolation of phonemes. Prereq: SPA 210 and SPA 211, and a 300-500 level Spanish course.

SPA 506 INTRODUCTION TO COMPARATIVE SPANISH, PORTUGUESE, AND ITALIAN LINGUISTICS. (3)

An introduction to the historical development of Spanish, Portuguese and Italian from a common source, with an emphasis on the comparison of related lexical, phonological and morphological items. Prereq: Reading knowledge of Spanish or Italian (fourth semester of course work).

SPA 519 THEMES IN MEDIEVAL AND EARLY MODERN SPANISH LITERATURE AND CULTURE (Subtitle required). (3)

This course is a topics course in Medieval and Early Modern Spanish Literature and Culture. Appropriate for advanced undergraduates and MA level graduate students. May be repeated to a maximum of six credits under different subtitles. Prereq: For undergraduates: SPA 400 or permission of instructor.

SPA 529 THEMES IN MODERN AND CONTEMPORARY SPANISH LITERATURE, CULTURE AND FILM (Subtitle required). (3)

This course is a topics course in Modern and Contemporary Spanish Literature, Film and Culture. Appropriate for advanced undergraduates and MA level graduate students. May be repeated to a maximum of six credits under different topic. Prereq: For undergraduates: SPA 400 or permission of instructor.

SPA 539 THEMES IN LATIN AMERICAN LITERATURE, CULTURE AND FILM (Subtitle required). (3)

This course is a topics course in Modern and Contemporary Latin American Literature, Film and Culture. Appropriate for advanced undergraduates and MA level graduate students. May be repeated to a maximum of six credits under different subtopic. Prereq: For undergraduates: SPA 400 or permission of instructor.

SPA 553 TEACHING OF SPANISH. (3)

The course is designed for teachers and prospective teachers of modern foreign languages, with emphasis on Spanish. Modern methodology, theory and practice of language pedagogy. Prereq: Permission of instructor required.

SPA 600 HISTORY OF THE SPANISH LANGUAGE. (3)

Introduction to the historical development of the Spanish language. The central focus of this course will be the dialogic and dialectic processes that gave rise the historical, cultural, phonological, morphological and lexical transformations of the Castilian languages, with particular emphasis on the changes that Castilian underwent as it evolved from Latin into modern Castilian.

SPA 601 STUDIES IN SPANISH PEDAGOGY: (Subtitle required). (1)

A one credit course that may or may not run concurrently with the 553 course on Spanish Pedagogy. Seminar topics may include an overview of second language acquisition theories as applicable to English learners of Spanish; contemporary teaching methodologies for instructors of Spanish language, integration of technology into curriculum; issues in testing and assessment. May be repeated to a maximum of 3 credits when taught under different subtitles.

SPA 602 STUDIES IN SPANISH LINGUISTICS: (Subtitle required). (3)

Readings and discussion of issues in Spanish linguistics and the teaching of Spanish. May be repeated to a maximum of 9 credits taught under different subtitles.

SPA 603 SPANISH APPLIED LINGUISTICS. (3)

A survey of the many sub-disciplines that constitute Applied Linguistics, a field dedicated to the study of language-based problems. This class will expose students to issues in the Spanish-language context and will equip them with the tools necessary to critically analyze these "problems". Prereq: Introduction to Hispanic Linguistics.

SPA 604 SOCIOLINGUISTICS OF THE SPANISH-SPEAKING WORLD. (3)

An introduction to sociolinguistic theory and its application to issues related to Spanish in Spain, Latin America, and the United States. It will focus on both quantitative and qualitative research on language variation and language contact in the Spanish-speaking world. Prereq: Introduction to Hispanic Linguistics.

- SPA 605 HISTORY OF THE SPANISH LANGUAGE. (3)**
Offers an overview of the diachronic evolution of Spanish from spoken Latin. Topics covered include the following: Vulgar Latin and Proto-Romance, the Old Spanish phonological system, morpho-syntactic changes from Latin to Spanish. Prereq: Introduction to Hispanic Linguistics.
- SPA 606 INTRODUCTION TO CRITICAL THEORY AND CULTURAL STUDIES. (3)**
Survey of major trends in critical and cultural theory since the early 20th century, from Formalism and New Criticism through Cultural Studies. Required of all new graduate students.
- SPA 607 SPECIAL TOPICS IN CRITICAL THEORY AND CULTURAL STUDIES: (Subtitle required). (1)**
Readings and discussion of special topics in critical theory and cultural studies. May be taught in English or Spanish. May be repeated to a maximum of 3 credits when taught under different subtitles.
- SPA 608 SPECIAL TOPICS IN SPANISH LITERATURE AND CULTURE: (Subtitle required). (3)**
Readings and discussion in essay, film and cultural production of Spain and Spanish America. May be taught in English or Spanish. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 609 SPECIAL TOPICS IN LATIN AMERICAN AND U.S. HISPANIC LITERATURE AND CULTURE: (Subtitle required). (3)**
Intensive study of an author, genre, period, or movement of Latin American or U.S. Hispanic literature, or an aspect of Latin American or U.S. Hispanic linguistics or culture. Taught in English or Spanish. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 610 STUDIES IN MEDIEVAL SPANISH LITERATURE: (Subtitle required). (3)**
Readings and discussion of Spanish literature from the 13th century through the 15th century. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 620 STUDIES IN EARLY MODERN AND BAROQUE SPANISH LITERATURE (Subtitle required). (3)**
Readings and discussion of Spanish literature and culture from the 16th and 17th centuries. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 630 STUDIES IN 18TH AND 19TH CENTURY SPANISH LITERATURE: (Subtitle required). (3)**
Readings and discussion of Spanish literature and culture from the 18th and 19th century. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 640 STUDIES IN 20TH AND 21ST CENTURY SPANISH LITERATURE: (Subtitle required). (3)**
Readings and discussion of contemporary Spanish literature and culture. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 650 STUDIES IN COLONIAL LATIN AMERICAN LITERATURE: (Subtitle required). (3)**
Readings and discussion of Colonial Latin American literature and culture. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 653 STUDIES IN SPANISH PEDAGOGY (Subtitle required). (3)**
Offers students a theoretical and practical overview of L2 Spanish pedagogy as a means to empower them as language instructors who can intelligently select and evaluate pedagogical theories and practices. Students will have the opportunity for hands-on implementation of theory in their own classroom practice. Prereq: SPA 603.
- SPA 654 SPANISH DIALECTOLOGY. (3)**
Explore current linguistic research on Spanish dialects through the discussion and the analysis of their theoretical and empirical frameworks. Prereq: SPA 604.
- SPA 655 COMPARATIVE-HISTORICAL ROMANCE LINGUISTICS. (3)**
Analyzes the complex interaction of structural, social, and cultural factors in the evolution of the Romance Languages. Provides insights into which language features can be considered typically Romance, and how far languages can diverge from these typical patterns and still be considered of the same language type. Prereq: SPA 605.
- SPA 660 STUDIES IN 19TH CENTURY LATIN AMERICAN LITERATURE: (Subtitle required). (3)**
Readings and discussion of 19th century Latin American literature and culture. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 680 STUDIES IN 20TH CENTURY LATIN AMERICAN LITERATURE 1900-1950'S: (Subtitle required). (3)**
Readings and discussion of Latin American literature and culture through the first half of the 20th century. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 681 STUDIES IN CONTEMPORARY LATIN AMERICAN LITERATURE 1960'S TO PRESENT: (Subtitle required). (3)**
Readings and discussion of contemporary Latin American literature and culture. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 685 STUDIES IN U.S. HISPANIC LITERATURE AND CULTURE: (Subtitle required). (3)**
Readings and discussion of U.S. Latino literature and culture. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 690 STUDIES IN SPANISH AND/OR LATIN AMERICAN FILM: (Subtitle required). (3)**
Viewings and discussion of Spanish or Latin American film, emphasizing its political, social, economics, and cultural contexts of the Hispanic world. Viewing of films (in Spanish) outside class is required. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 703 SEMINAR IN SLA THEORY IN SPANISH L2 LEARNING. (3)**
Offers a closer look at the primary concepts of Second Language Acquisition (interlanguage, learner variables, SLA theory, input, output, etc.) with a particular focus on the Spanish language. The acquisition of specific Spanish L2 structures and phenomena will be directly addressed, e.g., tense/aspect, mood, clitics, etc. Prereq: SPA 603.
- SPA 704 SEMINAR IN LINGUISTIC ANALYSIS OF SPANISH DISCOURSE (Subtitle required). (3)**
Analysis from a sociolinguistic and discourse analysis perspective of the relationship between language and power in the Spanish-speaking world. It would imply the discussion of a theoretical framework and its application to non-canonical texts produced in Spanish. Prereq: SPA 604.
- SPA 705 SEMINAR IN HISTORICAL LANGUAGE CONTACT IN THE SPANISH SPEAKING WORLD. (3)**
Offers a study of language contact in the Spanish-speaking world including not only the study of bilingualism, but also explorations into subfields like geolinguistics and language planning. Prereq: SPA 605.
- SPA 706 ADVANCED READINGS IN CRITICAL THEORY AND CULTURAL STUDIES: (Subtitle required). (3)**
Advanced readings and discussion of contemporary issues in critical theory and cultural studies. Taught in Spanish or English. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 708 CRITICAL PERSPECTIVES ON SPANISH LITERATURE AND CULTURE: (Subtitle required). (3)**
Advanced readings and discussion of Spanish literature and culture: open topic with preference for cross-disciplinary or trans-historical subjects. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 709 CRITICAL PERSPECTIVES ON LATIN AMERICAN AND U.S. HISPANIC LITERATURE AND CULTURE (Subtitle required). (3)**
Advanced readings and discussion of Latin American and U.S. Hispanic literature or culture. May deal with a single author's work, a genre or a cultural phenomenon: open topic with preference for cross-disciplinary or trans-historical subjects. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 710 SEMINAR IN MEDIEVAL SPANISH LITERATURE AND CULTURE: (Subtitle required). (3)**
Special and intensive study of selected topics in Spanish literature and culture from the 13th through the 15th century. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 720 SEMINAR IN EARLY MODERN AND BAROQUE SPANISH LITERATURE AND CULTURE: (Subtitle required). (3)**
Special and intensive study of selected topics in Spanish literature and culture of the 15th and 16th centuries. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 730 SEMINAR IN 18TH AND 19TH CENTURY SPANISH LITERATURE AND CULTURE: (Subtitle required). (3)**
Special and intensive study of selected topics in 18th and 19th century Spanish literature and culture. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 740 SEMINAR 20-21ST CENTURY SPANISH LITERATURE AND CULTURE: (Subtitle required). (3)**
Special and intensive study of selected topics in contemporary Spanish literature and culture. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 748 MASTER'S THESIS RESEARCH. (0)**
Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.
- SPA 749 DISSERTATION RESEARCH. (0)**
Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.
- SPA 750 SEMINAR IN COLONIAL LATIN AMERICAN LITERATURE AND CULTURE: (Subtitle required). (3)**
Special and intensive study of selected topics in Colonial Latin American literature and culture. May be repeated to a maximum of 9 credits when taught under different subtitles.

- SPA 760 SEMINAR IN 19TH CENTURY LATIN AMERICAN LITERATURE AND CULTURE: (Subtitle required).** (3)
Special and intensive study of selected topics in 19th century Latin American literature and culture. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 767 DISSERTATION RESIDENCY CREDIT.** (2)
Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.
- SPA 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE.** (1-6)
May be repeated to a maximum of 12 hours.
- SPA 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE.** (0-12)
May be repeated indefinitely.
- SPA 770 INTRODUCTION TO HISPANIC STUDIES.** (3)
This course is designed to give new and continuing M.A. and Ph.D. students an overview of and introduction to graduate studies and the profession of Hispanism.
- SPA 780 SEMINAR IN 20TH CENTURY LATIN AMERICAN LITERATURE AND CULTURE 1900-1950'S: (Subtitle required).** (3)
Special and intensive study of selected topics in Latin American literature and culture of the first half of the 20th century. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 781 SEMINAR IN CONTEMPORARY LATIN AMERICAN LITERATURE AND CULTURE 1960'S TO PRESENT: (Subtitle required).** (3)
Special and intensive study of selected topics in contemporary 20th and 21st century Latin American literature and culture. May be repeated to a maximum of 9 credits when taught under different subtitles.
- SPA 782 SPECIAL STUDIES IN SPANISH.** (1-3)
Selected studies and investigations in the Spanish language and Hispanic literature, permitting the student to work in areas of special interest and providing opportunity for original endeavor. May be repeated to a maximum of six credits. Prereq: Graduate standing.
- SPA 785 SEMINAR IN U.S. HISPANIC AND BORDER LITERATURE AND CULTURE: (Subtitle required).** (3)
Special and intensive study of related topics in U.S. Hispanic and Border literature and culture. May be taught in Spanish or English. May be repeated to a maximum of 9 credits when taught under different subtitles.

ST Social Theory

- ST 500 INTRODUCTION TO SOCIAL THEORY.** (3)
Multidisciplinary introduction to social theory for advanced undergraduate and graduate students. Overall goal is to substantiate the idea that social theory comprises a set of ontological and epistemological issues about human coexistence which are nondisciplinary-specific. The course will (1) examine what different social fields take as their central theoretical issues and concerns, and (2) conduct multidisciplinary explorations of key problem areas in contemporary social thought such as the nature of objectivity, the construction of gender, the role of space and time in social life, and modernity and postmodernity. Prereq: Either a prior theory course in any social discipline or a prior course in such a discipline that discussed theoretical issues. Exceptions will be permitted only after consultation with the instructor.
- ST 600 MULTIDISCIPLINARY PERSPECTIVES IN SOCIAL THEORY (Subtitle required).** (3)
An advanced multidisciplinary seminar in social theory for graduate students taught by a team of faculty members. Topics change from year to year; examples include: individual and society, the social construction of gender, modernity and postmodernity, space and time in social life, objectivity and its other, etc. Focus is on the cross-disciplinary investigation of such issues in the social sciences and humanities. May be repeated to a maximum of nine credits under different subtitles. Prereq: ST 500 or permission of instructors.
- ST 610 disCLOSURE EDITORIAL COLLECTIVE.** (1)
Course provides editorial experience in the production of disClosure, a multidisciplinary social theory journal operated by students. Activities include: soliciting manuscripts, overseeing the external review process, communicating with authors, accepting and rejecting manuscripts, producing and distributing a single issue. May be repeated to a maximum of three credits. Lecture, two hours per week. Prereq: ST 500 or permission of instructor.
- ST 690 TRANSDISCIPLINARY PERSPECTIVES IN SOCIAL THEORY.** (3)
An advanced seminar in transdisciplinary social theory, taught jointly by a faculty member representing the humanities and the social sciences, respectively. Social Theory encompasses the theoretical study of social life and the substantive knowledge informed by such theory. Transdisciplinary Social Theory seminars may focus on such topics as Space and Representation, Frankfurt School and Contemporary Critical Theory, or The University in Theory and in a Global Context. In each case, the seminar substantially and theoretically links the articulation of that particular topic as has occurred within both the social sciences and humanities. Prereq: Successful completion of ST 500 or ST 600 or permission of the instructors.

STA Statistics

- STA 200 STATISTICS: A FORCE IN HUMAN JUDGMENT.** (3)
This course is concerned with the interaction of the science and art of statistics with our everyday lives emphasizing examples from the social and behavioral sciences. The student will not be required to learn mathematical formulas. Topics include the nature of statistics, uses and misuses of statistics, the scope and limitations of statistics, criteria by which published statistics may be judged, interpretation of probability and the art of decision making. Prereq: Completion of the mathematics basic skills requirement.
- STA 210 MAKING SENSE OF UNCERTAINTY: AN INTRODUCTION TO STATISTICAL REASONING.** (3)
The goal of this course is to help students develop or refine their statistical literacy skills. Both the informal activity of human inference arising from statistical constructs, as well as the more formal perspectives on statistical inference found in confidence intervals and hypothesis tests are studied. Throughout, the emphasis is on understanding what distinguishes good and bad inferential reasoning in the practical world around us.
- STA 281 PROBABILITY AND STATISTICS USING INTERACTIVE COMPUTER TECHNIQUES.** (3)
The role of chance in experimental outcomes. Simple discrete and continuous probability distributions; combinatorics; moments and expectations; normal and binomial distributions; computer simulation and simple Monte Carlo methods. Descriptive statistics, charts, and graphs, and elements of statistical inference using interactive statistical packages (e.g., SCSS and/or MINITAB). Prereq: CS 150, CS 102, or CS 221; coreq: MA 114 or 132.
- †**STA 291 STATISTICAL METHODS.**
- STA 292 DESCRIPTIVE STATISTICS.** (1)
Graphical and tabular description of data; measures of central tendency and variation, scattergrams, correlation and best-fitting lines; index numbers. Prereq: MA 113, MA 123, or equivalent.
- STA 293 PROBABILITY.** (1)
Experiments and sample spaces; elementary and conditional probability; counting principles; random variables; distribution and expectation; normal and binomial distributions. Prereq: STA 292.
- STA 294 SAMPLING AND INFERENCE.** (1)
Sampling; sampling behavior of \bar{X} and S^2 ; confidence intervals and tests of hypotheses about the mean and variance of a normal population: the χ^2 and t-distributions. Prereq: STA 292 and 293.
- STA 296 STATISTICAL METHODS AND MOTIVATIONS.** (3)
Introduction to principles of statistics with emphasis on conceptual understanding. Students will articulate results of statistical description of sample data (including bivariate), application of probability distributions, confidence interval estimation and hypothesis testing to demonstrate properly contextualized analysis of real-world data. Prereq: MA 113, MA 123, MA 137, or equivalent.
- STA 320 INTRODUCTORY PROBABILITY.** (3)
Set theory; fundamental concepts of probability, including conditional and marginal probability; random variables and probability distributions (discrete and continuous); expected values and moments; moment-generating and characteristic functions; random experiments; distributions of random variables and functions of random variables; limit theorems. Prereq: MA 213 or equivalent. (Same as MA 320.)
- STA 321 BASIC STATISTICAL THEORY I.** (3)
Simple random sampling; point and interval estimation; hypothesis testing. Prereq: STA/MA 320.
- *STA 335 DATA ANALYSIS FOR PHYSICISTS.** (2)
A computational methods course in the theory and techniques of data analysis and error propagation, with emphasis on applications common to the physical sciences: the treatment of statistical errors, the maximum-likelihood method, the chi-square distribution, and curve fitting. Students will learn computer programming, and they will prepare a set of analysis programs for use in subsequent lab courses. Concur: MA 213, PHY 242. (Same as PHY 335.)
- STA 381 ENGINEERING STATISTICS – A CONCEPTUAL APPROACH.** (3)
Data collection, description, and factor “association” versus causal relationship; “Confidence” – statistical versus practical; and Hypothesis testing – All of these covered in a conceptual approach while relying heavily on the mathematical language of probability (e.g., population and sample distributions; sampling; regression on one variable) and use of simulated and real data. Prereq: MA 213.
- STA 417G DECISION MAKING UNDER UNCERTAINTY.** (3)
A continuation of MA 416 with topics selected from stochastic models, decision making under uncertainty, inventory models with random demand, waiting time models and decision problems. Prereq: CS/MA 416G and MA/STA 320, or consent of instructor. (Same as MA 417G.)

- STA 515 LINEAR AND COMBINATORIAL OPTIMIZATION. (3)**
Mathematical and computational aspects of linear programming and combinatorial optimization. Linear optimization is introduced by presenting solution techniques (primal and dual simplex) and studying geometric properties and duality for linear systems of inequalities. Asics of combinatorial optimization, including trees, paths, flows, matchings, and matroids, and the corresponding algorithms are presented. Prereq: A course in linear algebra or consent of instructor. (Same as MA 515.)
- STA 524 PROBABILITY. (3)**
Sample space, random variables, distribution functions, conditional probability and independence, expectation, combinatorial analysis, generating functions, convergence of random variables, characteristic functions, laws of large numbers, central limit theorem and its applications. Prereq: MA 213 and MA 322. (Same as OR 524.)
- STA 525 INTRODUCTORY STATISTICAL INFERENCE. (3)**
Simple random sampling, statistics and their sampling distributions, sampling distributions for normal populations; concepts of loss and risk functions; Bayes and minimax inference procedures; point and interval estimation; hypothesis testing; introduction to nonparametric tests; regression and correlation. Prereq: STA 320 or STA 524 or consent of instructor. (Same as OR 525.)
- *STA 569 APPLIED STATISTICAL METHODS. (3)**
This course is an introduction to research statistics. Topics include exploratory data analysis, random variables (binomial and normal distributions), estimation of proportions and means, correlation, regression, chi-squared tests, and ANOVA. Examples will be drawn from biomedical or professional applications with analysis illustrated in software common to data analysis. Prereq: MA 109 or consent of instructor.
- STA 570 BASIC STATISTICAL ANALYSIS. (4)**
Primarily in biological, behavioral and social sciences. Introduction to methods of analyzing data from experiments and surveys; the role of statistics in research, statistical concepts and models; probability and distribution functions; estimation; hypothesis testing; regression and correlation; analysis of single and multiple classification models; analysis of categorical data. Lecture, three hours; laboratory, two hours. Prereq: MA 109 or equivalent. For graduate students; undergraduates must have consent of instructor.
- STA 580 BIostatISTICS I. (2)**
STA 580 covers univariate statistical methods commonly encountered in public health studies. This includes descriptive statistics, hypothesis testing, paired and unpaired t tests, ANOVA, contingency tables, log rank test, regression and correlation. Prereq: MA 109 or higher. (Same as CPH 580.)
- STA 600 COMMUNICATING IN STATISTICS. (0)**
Pedagogical skills for teaching assistants in undergraduate statistics courses and effective communication skills for professional statisticians. Topics include: basic teaching techniques, use of writing assignments to increase understanding of statistical concepts, writing and grading effective exams, and recording and analyzing grades with the aid of software. Videotaped sessions will be conducted and critiqued. May be repeated a maximum of three times. Prereq: STAT major.
- STA 602 INTRODUCTION TO STATISTICAL METHODS. (4)**
Sampling distributions, statistical models, point estimates and confidence intervals, significance testing. Experimental Design (randomized blocks, nested/hierarchical models, Latin Squares), ANOVA (one, two, and multiway factorials, fixed and random effects), multiple comparison procedures, rank-based analyses, linear and nonlinear regression, power and sample size calculations, professional presentation of results. Lecture, three hours; laboratory, two hours per week. Prereq: Graduate Standing in Statistics.
- STA 603 INTRODUCTION TO LINEAR MODELS AND EXPERIMENTAL DESIGN. (4)**
Multivariate normal distribution, linear models in matrix notation, multiple linear regression (distributional results, categorical predictors, interactions, connection to ANOVA, sums of squares, diagnostics, ridge and nonparametric regression). Generalized linear models (binomial, poisson, and gamma regression), overdispersion, mixed models, diagnostics, professional presentation of results. Prereq: STA 602; coreq: STA 606.
- STA 605 COMPUTATIONAL INFERENCE. (3)**
Statistical Packages, numerical methods in maximization and integration, bootstrapping, simulation methods, multivariate normal distribution. Prereq: Graduate Standing in Statistics.
- STA 606 THEORY OF STATISTICAL INFERENCE I. (3)**
Convergence concepts (Central Limit Theorem), Sampling from a Normal Distribution, Order Statistics, Methods for finding point and interval estimates, methods for finding hypothesis tests, sufficiency principle, methods for evaluating point estimators (mean square error, unbiasedness, Cramer-Rao lower bound), Asymptotics of point estimates, interval estimates, and hypothesis testing procedures. Prereq: STA 623
- STA 607 THEORY OF STATISTICAL INFERENCE II. (3)**
Minimal sufficiency and completeness, Lehmann-Scheffe Theorem and basic decision theory, methods for evaluating interval estimators. Methods for evaluating hypothesis testing procedures, robustness and M-estimation, sequential analysis, censored data, model selection techniques. Prereq: STA 606.
- STA 612 SEQUENTIAL ANALYSIS. (3)**
Survey and application of sequential sampling. Sufficiency and estimation. Two Stage sampling. The SPRT and its properties, both exact and approximate. Truncated and grouped SPRT's. Decision Theoretic approach. Sequential Estimation. Fixed width confidence intervals. Composite hypotheses and nuisance parameters. Generalized SPRT's. K hypothesis problems. Optimal Stopping. Prereq: STA 606.
- STA 621 NONPARAMETRIC INFERENCE. (3)**
Estimation and testing when the functional form of the population distribution is unknown; rank and sign tests; tests based on permutations of observations; power of nonparametric tests; optimum nonparametric tests and estimators. Prereq: STA 606.
- STA 623 THEORY OF PROBABILITY. (3)**
Axioms of Probability, conditional probability, distribution functions, density and moment generating functions, expected values, discrete and continuous distributions, joint, marginal, and conditional distributions, transformations, covariance and correlation, inequalities, properties of sums from a random sample. Prereq: Graduate Standing in Statistics.
- STA 624 APPLIED STOCHASTIC PROCESSES. (3)**
Definition and classification of stochastic processes, renewal theory and applications, Markov chains, continuous time Markov chains, queueing theory, epidemic processes, Gaussian processes. Prereq: STA 524 or STA 623 or consent of instructor. (Same as OR 624.)
- STA 626 TIME SERIES ANALYSIS. (3)**
Time series and stochastic processes, auto-correlation functions and spectral properties of stationary processes; linear models for stationary processes, moving average, auto-regressive and mixed autoregressive-moving average processes; linear nonstationary models, minimum mean square error forecasts and their properties; model identification, estimation and diagnostic checking. Prereq: STA 422G or equivalent. (Same as ECO 626.)
- STA 630 BAYESIAN INFERENCE. (3)**
Likelihood principles, sufficiency, natural conjugate and hierarchical priors, empirical Bayesian analysis for estimation and testing. Prereq: STA 606.
- STA 632 LONGITUDINAL DATA ANALYSIS. (3)**
This course presents statistical techniques for analyzing longitudinal studies and repeated measures experiments that occur frequently in public health, clinical trials, and outcomes research. This course will cover linear mixed models, generalized linear mixed models and an introduction to nonlinear models as they apply to the analysis of correlated data. Prereq: BST 682 and BST 676 or equivalent. (Same as BST 762.)
- STA 635 SURVIVABILITY AND LIFE TESTING. (3)**
Life Table Analysis. Estimation of survival rates with censored data. Competing Risk Theory. Parameter estimation for commonly encountered reliability distribution with complete censored and truncated data. Maximum likelihood and order statistics techniques. Survivability growth models, comparison of survival distribution, and sample size determination in clinical trials. Extreme value theory. Prereq: STA 606.
- STA 643 ADVANCED EXPERIMENTAL DESIGN. (3)**
Linear Model interpretation in vector spaces and projections, use of generalized inverses, identifiability and estimability of contrasts, normal equations, Gauss-Markov Theorem, MVUE, distribution theory for quadratic forms, complex designs such as crossover, split-plot and repeated measures, asymptotics for general linear models, familiarity with nonparametric regression models. Prereq: STA 603.
- STA 644 ADVANCED LINEAR AND NONLINEAR MODELS. (3)**
Review of the general linear model. Regression methodology using Ridge, Bayes, and Stein estimators. The use of PRESS, C_p , and R^2 statistics as selection criteria. Modern computational methods. Nonlinear models and their methodology. Robust Regression. Prereq: STA 603.
- STA 645 COMPUTATIONAL THEORY AND DATA VISUALIZATION. (3)**
This course aims to teach students to use programming to gain intuition about statistical theory and fundamental concepts and to visualize data appropriately. Specifically, computational methods covered include simulation methods and numerical methods in maximization and integration. Appropriate graphical displays of statistical and simulation results will be emphasized. Statistical concepts covered include sampling distributions, confidence intervals and p-values, the central limit theorem, expectation, and maximum likelihood estimation. Student understanding of course ideas will rely heavily on performing simulation studies and discussing the assimilated class results online. Prereq: Graduate status in Master of Applied Statistics.
- STA 646 FOUNDATIONS OF PROBABILITY AND INFERENCE. (4)**
This course introduces probability, random variables, independence, and distribution theory. Inference topics include, but are not limited to, estimation, hypothesis tests, likelihood ratio tests, confidence intervals, sufficiency, and efficient estimators. Prereq: Graduate status in Master of Applied Statistics. Coreq: STA 645.
- STA 647 STATISTICAL COMPUTING WITH SAS. (2)**
This course aims to teach students to use the SAS statistical programming language and to apply this knowledge appropriately in a variety of settings. Student achievement in the course will rely heavily on performing computational tasks, data management, editing data, running basic statistical procedures, and producing reports using SAS. Prereq: Graduate status in Master of Applied Statistics.

STA 648 REGRESSION METHODS. (4)

Statistics (STA) 648 is an applied regression course that emphasizes data analysis and interpretation. Generally, regression is a collection of methods for determining and using models that explain how a response variable (dependent variable) relates to one or more explanatory variables (predictor variables). This course aims to teach students about different regression models, their corresponding assumptions, and how to interpret the estimated models. Statistical computing will be central to understanding material in this course as the student will be required to perform analyses on real datasets using the learned methods. Prereq: STA 645 and admission to the Master of Applied Statistics program or permission of the instructor.

STA 649 DESIGN OF EXPERIMENTS. (4)

Statistics (STA) 649 is an introduction to the principles of experimental design. Many statistics courses are taught from the perspective of analyzing data that has already been collected. However, problems that occur at the analysis stage (e.g., violations of assumptions, too small of sample, etc.) could have been avoided if the experimenter had consulted a statistician before the experiment was conducted and the data collected. This course will introduce common experimental designs so that when the data are collected, the aforementioned shortcomings are avoided. The course will provide equal treatment to both the conceptualization of the designs and the analysis of the subsequent experiment. Prereq: STA 647, STA 648, and admission to the Master of Applied Statistics program or permission of the instructor.

STA 650 APPLIED MULTIVARIATE STATISTICS. (3)

The main objective of this course is to equip students with the traditional and modern multivariate statistical methods. Students will learn the motivation behind these methods, how to apply them and interpret the results obtained. Focus will be on understanding distributional results rather than the technical derivations. Students will gain competency in writing R scripts for applying the multivariate methods learned. Prereq: Graduate status in Master of Applied Statistics, STA 646, STA 648; corequisite: STA 649.

STA 651 ADVANCED PROGRAMMING WITH R. (1)

Statistics (STA) 651 discusses advanced programming techniques using the R language. Programming topics include how to handle various facets of data structures in R, how to produce simple and advanced graphics in R, and how to synthesize the necessary components of simulation studies. Prereq: STA 645 and admission to the Master of Applied Statistics program or permission of the instructor.

STA 652 ADVANCED STATISTICAL MODELING. (3)

This course aims to teach students to use advanced statistical modeling techniques and to interpret the results in context. Specifically, the statistical methods covered include general linear models and linear mixed models, semiparametric regression, nonlinear models, mixed models in ANOVA, generalized linear models, ridge regression, and repeated measures experiments. Prereq: STA 649 and graduate status in Master of Applied Statistics.

STA 653 CLINICAL TRIALS. (3)

Design and analysis of Phase I-III clinical trials, interim monitoring of trials, sample size, power, crossover trials, bioequivalency, mixed models, and meta analysis. Coreq: STA 603. (Same as BST 713.)

STA 654 APPLIED BAYESIAN INFERENCE. (3)

This course provides an introduction to Bayesian inference and a summary of Bayesian methods for fitting, assessing, and selecting models. Topics include Bayes' Rule and Probability, Binomial Models for Proportions, Poisson Models for Counts, Normal Models for Continuous Data, Linear Regression, Log-linear and Contingency Tables, Hierarchical Models, Hypothesis Testing, Model Comparison, and Selected Applications. Prereq: Graduate status in Master of Applied Statistics, STA 646, STA 648.

STA 655 INTRODUCTION TO STATISTICAL GENETICS. (3)

BST 655 presents an introduction to the statistical methodologies used today to investigate genetic susceptibility to complex diseases. The course focuses on linkage and association analysis with applications to real-world data. Commonly used (and freely available) software will be presented and used throughout. Because the field is constantly evolving, a focus of the material for this course will be recent statistical human genetics literature. Prereq: STA 580 or equivalent. (Same as BST 655.)

STA 656 STATISTICAL QUALITY CONTROL. (3)

Dimensions of quality, numerical and graphical descriptions of data, discrete and continuous distributions, basic reliability concepts, control charts for variables and attributes, process capability studies, and selected additional topics as time permits such as cusum charts, acceptance sampling. Prereq: STA 645 and admission to the Master of Applied Statistics program or permission of the instructor.

STA 659 ADVANCED STATISTICAL METHODS. (3)

Supervised reading, discussion, and practice of a selected statistical methodological area. Prereq: STA 646, STA 648, and graduate status in Master of Applied Statistics.

STA 661 MULTIVARIATE ANALYSIS I. (3)

Characterization and properties of the multivariate normal distribution, random samples from this distribution; multivariate analysis of variance, related distribution theory; factor analysis. Prereq: STA 603.

STA 662 RESAMPLING AND RELATED METHODS. (3)

Theory and application of the bootstrap, jackknife and other resampling methods. Prereq: STA 605 and STA 606.

STA 665 ANALYSIS OF CATEGORICAL DATA. (3)

Multinomial and product-multinomial models; large-sample theory of estimation and testing, Pearson chi-square and modified chi-square statistics, Pearson-Fisher Theorem, Wald Statistics and generalized least squares technique; applications to problems of symmetry, association and hypotheses of no interaction in multi-dimensional contingency tables. Prereq: STA 603 and STA 606. (Same as BST 763.)

STA 671 REGRESSION AND CORRELATION. (2)

Simple linear regression, elementary matrix algebra and its application to simple linear regression; general linear model, multiple regression, analysis of variance tables, testing of subhypotheses, nonlinear regression, step-wise regression; partial and multiple correlation. Emphasis upon use of computer library routines; other special topics according to the interests of the class. Lecture, three hours per week; laboratory, two hours per week for seven and one half weeks. Offered the first or second half of each semester. Prereq: STA 570 or STA 580.

STA 672 DESIGN AND ANALYSIS OF EXPERIMENTS. (2)

Review of one-way analysis of variance; planned and unplanned individual comparisons, including contrasts and orthogonal polynomials; factorial experiments; completely randomized, randomized block, Latin square, and split-plot designs: relative efficiency, expected mean squares; multiple regression analysis for balanced and unbalanced experiments, analysis of covariance. Lecture, three hours per week; laboratory, two hours per week for seven and a half weeks. Offered the first or second half of each semester. Prereq: STA 671.

STA 673 DISTRIBUTION-FREE STATISTICAL INFERENCE AND ANALYSIS OF CATEGORICAL DATA. (2)

Inference for population quantiles, sign tests, Wilcoxon tests, Kruskal-Wallis and Friedman tests, Kendall and Spearman rank correlation. Goodness-of-fit tests for completely and partially specified distributions, rxc contingency tables, McNemar and Cochran's Q tests for matched proportions; three dimensional tables and tests of partial and multiple associations. Lecture, three hours per week; laboratory, two hours per week for seven and a half weeks. Offered the first or second half of each semester. Prereq: STA 570 or STA 580.

STA 675 SURVEY SAMPLING. (2)

Simple random sampling and stratified random sampling, ratio and regression estimators, cluster sampling, systemic sampling, and multi-stage sampling. Specific problems associated with running a survey: non-response, call-backs, questionnaire construction, mail questionnaires, and area sampling. Lecture, three hours per week; laboratory, two hours per week for seven and a half weeks. Offered the first or second half of each semester. Prereq: STA 570 or STA 580.

STA 676 QUANTITATIVE INHERITANCE IN PLANT POPULATIONS. (3)

After a brief review of population genetics theory, the course is divided into two sections which cover methods of estimating genetic variances and selection methods in population improvement. The course will focus on handling and interpretation of actual data sets through data analysis and discussion of current literature. Prereq: STA 570, STA 671, and STA 672. (Same as PLS 676.)

STA 677 APPLIED MULTIVARIATE METHODS. (3)

Survey of multivariate statistical techniques. The multivariate normal distribution; the general linear model; general procedures for parameter estimation and hypothesis testing in the multivariate case; Hotelling's T^2 , multivariate analysis of variance and covariance; structural models for the covariance matrix; utilization of existing computer programs. Prereq: STA 671 and 672.

STA 679 DESIGN AND ANALYSIS OF EXPERIMENTS II. (3)

A continuation of STA 672. Multiplicative models in two-factor experiments. Partial factorials. Extensions and modifications of split plots and Latin squares. Confounding in factorial experiments. Response surface methods. Estimation of variance components. One restriction and two restriction lattice and incomplete block designs. Combining analyses of similar experiments. Prereq: STA 671 and 672 or equivalent.

STA 681 BIostatISTICS II. (3)

Students will learn statistical methods used in public health studies. This includes receiver operator curves, multiple regression logistic regression, confounding and stratification, the Mantel-Haenzel procedure, and the Cox proportional hazardous model. Lecture, two hours; laboratory, two hours per week. Prereq: STA 580 or CPH 580. (Same as CPH 630.)

STA 690 SEMINAR IN STATISTICS. (1)

May be repeated to a maximum of three credits.

STA 692 STATISTICAL CONSULTING. (3)

Basic principles of statistical consulting including how to manage a consulting session, how to formulate and solve problems and how to express results both orally and in writing. Students will be expected to analyze data from a current consulting project. Lecture, two hours; laboratory, two hours per week. Coreq: STA 643 or 644 or consent of instructor.

STA 693 BIostatistical PRACTICUM. (1-2)

This course will involve students in small consulting projects intended to illustrate practical biostatistical problems. Prereq: STA 603.

STA 695 SPECIAL TOPICS IN STATISTICAL THEORY (Subtitle required). (1-3)

To be selected by staff. May be repeated to a maximum of nine credits. Prereq: STA 601.

STA 700 FOUNDATIONS OF PROBABILITY AND INFERENCE. (3)

Measures on the real line and probability spaces, Lebesgue measure, properties of distribution functions and random variables, integrals and expectations. Prereq: MA 471G.

STA 701 ADVANCED STATISTICAL INFERENCE I. (3)

Basic concepts of decision theory, sufficiency and completeness; completeness of multiparametric exponential family; unbiasedness and invariance of decision rules; Bayes, minimax and invariant estimators; testing of hypotheses and optimality properties. Prereq: STA 607 and STA 700.

STA 702 ADVANCED STATISTICAL INFERENCE II. (3)

UMP and UMP unbiased tests for multiparametric exponential families; locally best tests; invariance and permutation tests, UMP invariant tests for linear hypotheses; asymptotic aspects of classical statistics, ML estimation and concepts of efficiency; sequential probability ratio test; confidence set, UMA unbiased and invariance confidence sets. Prereq: STA 701.

STA 703 ADVANCED PROBABILITY. (3)

Probability spaces, extension theorem, random variables; independence, conditional probability, conditional expectation; laws of large numbers, law of the iterated logarithm; convergence in distribution; characteristic functions; central limit theorems; martingales. Prereq: STA 700 and STA 532.

STA 704 ADVANCED PROBABILITY - STOCHASTIC PROCESSES. (3)

Random functions; jump Markov processes; processes with independent increments; stationary stochastic processes; diffusion processes; limit theorems; applications of stochastic processes. Prereq: STA 703.

STA 705 ADVANCED COMPUTATIONAL INFERENCE. (3)

Numerical maximization and integration, resampling methods, EM algorithm, Markov Chain Monte Carlo methods. Prereq: STA 605 and STA 701.

STA 707 ADVANCED DATA ANALYSIS. (3)

Theory and data analysis involving likelihood functions, mixed models, missing responses. Prereq: STA 643.

STA 709 ADVANCED SURVIVAL ANALYSIS. (3)

Lindberg CLT, Kaplan-Meier and related estimators, Cox proportional hazards and related methods, approximations of type I and II error. Prereq: STA 635, 701.

STA 715 READINGS IN STATISTICS AND PROBABILITY (Subtitle required). (1-6)

Supervised reading and discussion of a selected research topic. May be repeated to a maximum of nine credits. Prereq: STA 701 and STA 703 and consent of instructor.

STA 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

STA 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

STA 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

STA 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

May be repeated to a maximum of 12 hours.

STA 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

SUR Surgery**SUR 815 FIRST-YEAR ELECTIVE, SURGERY. (1-3)**

With the advice and approval of his or her faculty adviser, the first-year student may choose approved electives offered by the Department of Surgery. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the first-year curriculum. Pass-fail only. Prereq: Admission to first year, College of Medicine.

SUR 825 SECOND-YEAR ELECTIVE, SURGERY. (1-4)

With the advice and approval of his or her faculty adviser, the second-year student may choose approved electives offered by the Department of Surgery. The intent is to provide the student an opportunity for exploration and study in an area which supplements and/or complements required course work in the second-year curriculum. Pass-fail only. Prereq: Admission to second-year medical curriculum and approval of adviser.

SUR 850-899 FOURTH-YEAR ELECTIVE FOR MEDICAL STUDENTS. (1-6)

With the advice and approval of the faculty adviser and the Student Progress and Promotions Committee, the fourth-year student may choose approved electives offered by the various departments in the College of Medicine. The intent is to provide the student an opportunity

to develop his fund of knowledge and clinical competence. Prereq: Admission to the fourth year, College of Medicine and/or permission of the Student Progress and Promotions Committee.

Approved electives:

SUR 851 ACTING INTERNSHIP IN ORTHOPEDIC SURGERY

SUR 852 ACTING INTERNSHIP IN PEDIATRIC SURGERY

SUR 853 ACTING INTERNSHIP IN OTOLARYNGOLOGY-HEAD AND NECK SURGERY

SUR 854 ACTING INTERNSHIP IN UROLOGY

SUR 855 ACTING INTERNSHIP IN PLASTIC SURGERY

SUR 857 ACTING INTERNSHIP IN TRANSPLANTATION SURGERY

SUR 862 ACTING INTERNSHIP IN GENERAL SURGERY

SUR 863 ACTING INTERNSHIP IN CARDIOTHORACIC SURGERY

SUR 865 ACTING INTERNSHIP IN SURGICAL INTENSIVE CARE

SUR 866 RESEARCH IN SURGERY

SUR 869 ACTING INTERNSHIP IN TRAUMA SURGERY

SUR 870 ELECTIVE IN HEARING, SPEECH AND LANGUAGE

SUR 871 FOURTH YEAR CLERKSHIP IN SURGERY

SUR 872 OUTPATIENT MANAGEMENT IN SURGICAL SPECIALTIES

SUR 873 HAND/UPPER EXTREMITY SURGERY

SUR 875 MAXILLOFACIAL DISEASE FOR THE HEALTH CARE PROFESSIONAL

SUR 876 ACTING INTERNSHIP IN ORAL AND MAXILLOFACIAL SURGERY

SUR 890 SURGERY OFF-SITE

SW**Social Work****SW 124 INTRODUCTION TO SOCIAL SERVICES. (3)**

Introduction to social welfare concepts and philosophies. Examination of the profession of social work and its philosophy and value commitments within social welfare. Public and private service delivery systems will be studied. Required of social work majors and recommended it be taken the first year.

SW 222 DEVELOPMENT OF SOCIAL WELFARE. (3)

Study of the cultural traditions, value orientations, and political and economic forces which have contributed to the emergence of present social welfare policies and systems in the United States. Required of social work majors and open to all others.

SW 300 SOCIAL WORK PRACTICE I. (4)

An introduction to generalist social work practice theory, a study of skills in professional practice with individuals and families, and an examination of social work functions in the direct delivery of social services. Special attention is paid to the NASW Code of Ethics and to the social worker's obligations towards populations-at-risk. Class includes four hours per week of laboratory in health or welfare settings, and three lecture hours. Prereq: SW 124. Open only to social work majors.

SW 320 GLOBAL POVERTY: RESPONSES ACROSS CULTURES. (3)

An examination of poverty in various non-Western cultures. The course will cover the nature, scope, and distribution of poverty, definitions of poverty, common characteristics of the poor, as well as cultural traditions and folkways which contribute to the problem. Social welfare responses and humanitarian efforts which address the problem are examined.

SW 322 SOCIAL WORK AND SOCIAL WELFARE. (4)

Designed for transfer students of junior rank. Study of social welfare development, social work philosophy and value commitment and with an examination of social service agencies and programs. Option of agency visitation, group experiences, social service. Not open to those having SW 124 or 222.

#SW 325 SOCIAL JUSTICE FOUNDATIONS. (3)

This course will examine social justice from the broad perspective that all people are deserving of opportunities, rights, protections, obligations and social benefits. Definitions, theories and perspectives as they relate to the context and impact of power, oppression and privilege will be examined within both historical and contemporary lenses. This course will require students to examine personal and professional values and ethics related to social justice as well as how those influence our ability to be change agents for social justice.

SW 350 SOCIAL WORK PRACTICE II: SURVEY OF GROUPS. (3)

This course introduces students to the place of group work in professional social work practice. Examined are the basic knowledge, specific roles, strategies, and skills when working with groups of vulnerable populations. This course assists students in recognizing the efficacy of practice with groups of different types that fulfill diverse populations are conducted in a variety of community and organizational settings. It introduces students to group dynamics, development, and techniques needed to be a successful group leader. Prereq: Open to Social Work Majors, SW 300, SW 421.

SW 354 THE FAMILY IN CROSS-CULTURAL PERSPECTIVE. (3)

Approaches the study of the family from a comparative perspective, emphasizing cross-cultural variability in the structure and function of family. Kinship, household formation, sex roles, and socialization are examined in the context of the family, as well as patterns of interaction, personality formation, and family pathology. Prereq: Declared majors or minors in Dept. of Family Sciences or SW. (Same as FAM 354.)

SW 370 FINANCIAL SOCIAL WORK. (3)

Personal finance terminology, ratios, financial statements, individual and family finance problems, decision options, decision consequences, and decision-making skills are studied to understand their influence on clients' underlying financial problems in social work practice. Included is an examination of the material from a strengths based behavioral perspective including understanding the role of diversity factors.

SW 395 INDEPENDENT WORK. (1-4)

Organized study research and/or tutorial work focused on special issues or problems. May be repeated to a maximum of four credits. Prereq: Major, standing of 3.0 overall GPA, or consent of dean, and consent of adviser and instructor.

SW 400 SOCIAL WORK PRACTICE III. (4)

Emphasizing an ecological and systems framework, the course explores theories and practice approaches appropriate for work with groups, organizations, and community systems. The impact of discrimination and oppression on populations-at-risk is discussed, along with problem-solving and interventive strategies. The ethical and legal strategies of the generalist practitioner are studied. Prereq: Open only to social work majors, SW 300, SW 444, SW 435.

SW 401 PRACTICE WITH CHILDREN AND FAMILIES. (3)

The critical examination of social work practice with children and families with emphasis on social service interventions to strengthen family life. Prereq: SW 354.

SW 421 HUMAN BEHAVIOR AND THE SOCIAL ENVIRONMENT I. (3)

This foundation course is the first of a two part social work major course sequence that utilizes life course perspective and other theories as tools for understanding human behavior and its development across the lifespan. A "person in the environment" focus is utilized as students explore the interrelatedness of biological, social, cultural, psychological, and environmental factors in human behavior and its ongoing development. Particular attention will be given to exploring the impact of racism, sexism, ethnocentrism, classism, and homophobia on human behavior across the life journey. Prereq: Open to Social Work Majors; SW 124 and SW 222 or SW 322.

SW 422 HUMAN BEHAVIOR AND THE SOCIAL ENVIRONMENT II. (3)

This foundation course is the second in the sequence of two social work courses that focuses on theory as a tool for understanding human behavior on multiple interacting levels, including: individual, family, small group, organization, community and society. The course will explore the interrelatedness of biological, social, cultural, psychological and environmental factors in human behavior and development. Particular attention will be given to exploring the impact of racism, sexism, ethnocentrism, classism and homophobia on human behavior at each level. Prereq: Open to Social Work Majors; completion of SW 300, SW 421.

SW 430 SOCIAL WELFARE POLICY: THEORY AND IMPLEMENTATION. (3)

The study and demonstration of different analytic models utilized in analysis of social welfare policy. The course also introduces content in the areas of organizational theory, management tools necessary to the understanding of implementation and evaluation of social welfare policy. Prereq: Open only to social work majors, SW 222 or SW 322, PS 101 or equivalent PS course.

SW 435 FOUNDATIONS OF PROFESSIONAL ETHICS IN SOCIAL WORK. (3)

This course introduces students to the fundamentals of ethical decision making in generalist professional social work practice. The major philosophical formulations that underlie ethics and relevant concepts derived from these formulations are highlighted as is the development of ethical reasoning and decision-making skills in dealing with moral problems and dilemmas that arise in entry-level social work practice. Prereq: Open to social work majors, SW 300, SW 421.

SW 444 EDUCATIONAL PRACTICUM I. (5)

This course is an introduction to social work field education under faculty direction in the Teaching-Learning Center. Students will begin to apply knowledge from prerequisite courses in experiences which utilize social work practice skills with emphasis on individuals, families and small groups, toward goals of prevention, restoration and enhancement of social functioning. This course includes 18 hours per week of seminar and experiential learning. Prereq: Open only to social work majors, SW 300, SW 420, SW 430.

***SW 455 EDUCATIONAL PRACTICUM II. (8)**

This course continues the process of social work practicum under faculty direction in a Teaching-Learning Center. Students will continue to apply knowledge from prerequisite and concurrent courses in experiences which utilize social work practice skills with individuals, families, and small groups as well as with organizations and communities toward the goals of prevention, restoration and enhancement of social functioning. Prereq: Open to social work majors, SW 400, SW 444, SW 450.

SW 450 SOCIAL WORK RESEARCH. (4)

An introductory study and application of the processes of research in building social work knowledge and developing effective social work practice. Prereq: Open only to social work majors, basic statistics course, SW 444, SW 435.

SW 460 UNDERSTANDING BEHAVIOR FROM A SOCIO-CULTURAL PERSPECTIVE: THEORIES OF PSYCHOPATHOLOGY. (4)

Problematic behavior is discussed employing a social work perspective. Students are introduced to a bio-psycho-socio-cultural assessment model and the DSM IV-TR criteria for mental health disorders. Students learn to respect the person in his or her environment and not to categorize them by their problems or diagnosis. Risk/resiliency and strengths perspectives

are utilized to understand mental disorders within a socio-cultural context. Emphasis is placed on understanding how theoretical models explain psychopathology and inform interventions in social work practice. Prereq: Open to Social Work Majors; SW 350, SW 422, SW 444.

SW 470 SENIOR SEMINAR. (3)

An integrative professional seminar for senior majors in social work, usually taken in the last semester of course work. Social work issues of an educational, professional and practice nature are examined. Prereq: Open only to social work majors, completion of all core social work courses, but SW 445 prerequisite or concurrent. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

SW 505 CHILD WELFARE SERVICES. (2-3)

This course provides a comprehensive introduction to child abuse and neglect, including historical perspectives, indicators of maltreatment, theories about its etiology, and effective interventions on the micro and macro levels. Students will learn about child protective policies and services, and the social worker's roles and responsibilities.

SW 511 GENOCIDE: INTERVENTION WITH SURVIVORS AND GLOBAL PREVENTION. (3)

This course will examine the psychological, cultural, and societal roots of human cruelty, mass violence, and genocide. It explores what enables individuals collectively, and individually to perpetrate mass cruelty/genocide or to stand by and watch such horrors. The course will cover key concepts, perpetrator psychology, biopsychosocial effects on and intervention with survivors. Prereq: Open to students with a minimum of sophomore status and an introductory social science course, or consent of instructor.

SW 512 SOCIAL WORK IN THE CRIMINAL JUSTICE SYSTEM. (3)

Criminal justice processes are studied and evaluated. Factors influencing criminality are examined, as well as consequences and costs to offenders and to society of current policies to control and prevent crime. Traditional and innovative community and institutional programs for adult and juvenile offenders are emphasized to prepare those wanting to work with this population. Prereq: Junior standing or consent of instructor.

SW 514 ALCOHOLISM AND PROBLEM DRINKING. (2-3)

This course will examine traditional and emerging concepts of alcoholism and problem drinking with special attention to problems in definition. The contributions of recent research to our understanding of risk factors associated with various populations will be reviewed. Selected strategies for identification of and intervention into alcoholism and problem drinking will be discussed with particular attention to the unique problems and needs of racial minorities, youth, female, and other populations.

SW 515 MEDICAL AND PSYCHOSOCIAL ASPECTS OF DISABILITIES I. (3)

This course is designed to prepare rehabilitation and mental health counselors, social workers and students in related fields with a working knowledge of the medical and psychosocial aspects of disability and chronic illness, and to provide students with the knowledge and understanding necessary to function and serve effectively in rehabilitation counseling and related interdisciplinary, allied health, and mental health settings. Topic areas include: human body systems, medical terminology, medical, functional, environmental and psychosocial aspects of disabilities and chronic illness, professional ethics, assistive technology, diagnostic classification systems, psychopharmacology, functional capacity, and wellness and illness prevention concepts and strategies. Specific disabilities covered in this course include neurologic, hearing, vision, intellectual disabilities, developmental disabilities, autism and Asperger's, learning disabilities, attention deficit disorders, and substance abuse. Prereq: College level courses in biology and psychology or consent of instructor. (Same as RC 515.)

SW 516 MEDICAL AND PSYCHOSOCIAL ASPECTS OF DISABILITIES II. (3)

This course is designed to prepare rehabilitation and mental health counselors, social workers, and students in related fields with a working knowledge of the medical and psychosocial aspects of disability and chronic illness, and to provide students with the knowledge and understanding necessary to function and serve effectively in rehabilitation counseling and related interdisciplinary, allied health, and mental health settings. Topic areas include: human body systems, medical terminology, medical, functional, environmental and psychosocial aspects of disabilities and chronic illness, professional ethics, assistive technology, diagnostic classification systems, psychopharmacology, functional capacity, and wellness and illness prevention concepts and strategies. Specific disabilities covered during this semester include psychiatric and psychological impairments, endocrine, gastroenterology, cancer, burns and skin disorders, blood and the immune system, respiratory, kidney and renal function and musculoskeletal. Prereq: College level courses in biology and psychology or consent of instructor. (Same as RC 516.)

#SW 518 INTERNATIONAL SOCIAL WORK. (3)

This course assists students in developing an in-depth understanding of complex, global social problems accounting for their cultural context through application of a theoretical and conceptual framework to prepare them for international social work or work with immigrants and refugees in the United States. The course explores four areas: 1) International social development and macro practice; 2) Globalization, socio-political and economic interdependence, and global social issues; 3) International agreements, models of social development, and best practices; and 4) International social work practice at home and abroad. Students will learn to evaluate interventions and practice models in cultures with values and ideologies that are different from their own and critically analyze their impact at local, regional, national or international levels.

#SW 519 UNDERSTANDING INTIMATE PARTNER VIOLENCE. (3)

The course is designed to provide students with opportunities to explore the prevalence and impact of intimate partner violence (IPV) and history of systemic response to it. Students will be introduced to methods of engagement, assessment, and intervention based on current research and practice knowledge. Particular attention will be given to the examination of personal and professional values regarding IPV as well as co-occurring issues.

SW 523 SOCIAL PERSPECTIVES ON RACISM AND ETHNIC PREJUDICES IN AMERICA. (2-3)

The course is designed to provide the knowledge needed in understanding the dynamics of institutional racism from a broader perspective of five specific ethnic minorities in rural and urban America. Particular emphasis is placed upon planned community change and strategies pertinent to minority group communities. Students who wish to make a special, in-depth study of one of the specified content areas may take this course for one additional credit. Prereq: Consent of instructor. (Same as AAS 523.)

SW 530 RESPONDING TO MILITARY AND VETERAN POPULATIONS. (3)

This course provides an overview of social work practice with military members, veterans, and military families. Students will learn to appreciate the unique experiences and stresses of military members and their families, and resultant implications for helping professionals serving this population. Topics to be covered include: (a) Warfare's historical role in shaping public policy, (b) the military as a distinct subculture of American society, (c) common psychosocial problems and stresses experienced by military members, veterans, and military families, (d) a survey of evidenced-based treatments for common psychopathologies and psychosocial problems experienced by this population, (e) an overview of systems of care serving this population, including the roles of social workers within these systems, and special ethical considerations for social workers serving military and veteran populations. Prereq: Open to graduate and upper division undergraduate students.

SW 571 SOCIAL WORK AND THE LAW. (3)

The course examines the lawyer's method and the legal system; the organization and ethics of the practicing bar; the impact of legal decision-making and lawyers on society in such selected situations as civil rights, juvenile and criminal justice and consumer debtor-creditor relationships; and working relationships between social workers and lawyers.

SW 580 TOPICAL SEMINAR IN SOCIAL WORK. (1-4)

Study of issues of current and special significance for social work practice. Issues selected in accordance with the needs and interests of students enrolled. May be repeated to a maximum of eight credits. Prereq: Open to the student of social work or consent of instructor.

SW 595 COOPERATIVE SOCIAL WORK EDUCATION. (0)

A course designed for social work students who, through the cooperative education office, secure full-time, salaried, career-related positions under the supervision of a sponsoring employer. Enrollment in the course constitutes full-time status. Course may be taken on a pass-fail basis only and repeated with the permission of the cooperative education office. Prereq: Approval of the Cooperative Education Coordinator.

SW 600 THEORY-INFORMED PRACTICE WITH INDIVIDUALS. (3)

This course introduces students to the history and philosophy of the social work profession and social work practice theory. It enhances analytical thinking that underlies engagement, assessment, intervention, and evaluation with individuals, and focuses on mastering social work skills for professional practice with individuals. Special attention is paid to the NASW Code of Ethics and to the social worker's obligations toward populations-at-risk. Prereq: Acceptance into the MSW program.

SW 601 THEORY-INFORMED PRACTICE WITH FAMILIES. (3)

This course introduces students to family social work and the theoretical perspectives and concepts that underlie social work with families. The course emphasizes the development and application of skills and techniques for conducting family assessments and for conceptualizing theory-based and research-informed intervention plans for families in need. The course addresses diverse family forms, cultural competence, and multi-problem families within the contexts of neighborhoods, schools, and communities. Prereq: SW 600 or concurrent.

SW 602 THEORY-INFORMED PRACTICE WITH GROUPS. (3)

This course introduces students to the place of group work in professional social work practice, the theoretical and philosophical formulations that underlie group work and the concepts and techniques derived from these formulations. The course emphasizes group dynamics, development, and techniques needed to be a successful group leader. Prereq: Admission into the MSW program, SW 600, SW 601, SW 635.

SW 606 SEMINAR IN CRIMINAL JUSTICE PROCESSES. (2)

Criminal justice processes are studied and evaluated emphasizing system aims, theories of criminality and societal reaction, the consequences and costs to offenders and to society of current policies to control and prevent crime. Traditional and innovative community and institutional programs for adult and juvenile offenders will be examined.

SW 613 URBAN ECOLOGY AND AGING. (2 or 3)

Effects of an urban environment upon the aging population, including community design, city planning, housing, transportation, relocation, and mobility. The impact of technological advances will be examined from the point of view of theory, current research, and the process of man-environmental relationships.

SW 616 SOCIAL WORK PRACTICE IN SCHOOL SETTINGS. (2-3)

A presentation and examination of school social work practice. Emphasis will be placed on roles, competencies and skills necessary for effective service provision. The differences in services to children in schools will be contrasted with those in primary social service settings. Focus will also be given to the impact of school legislation and regulations on the choice of populations served and programs provided.

SW 617 FAMILY VIOLENCE: SOCIAL WORK INTERVENTIONS. (2-3)

The development of a knowledge based framework for understanding, preventing and intervening in family violence as seen in child, spouse and elder abuse.

SW 618 SOCIAL WORK PRACTICE WITH GAY AND LESBIAN PEOPLE. (2-3)

This course is designed to expand the knowledge and understanding of students about the theory and dynamics of homophobia, heterosexism, and homonegativity. The effects of living with prejudice and discrimination among the gay and lesbian support systems available. Micro and macro social work intervention strategies will be studied as they relate to overall themes. Prereq: SW 600 or 601 or consent of instructor.

SW 623 SOCIAL WORK PRACTICE WITH GROUPS. (2-3)

This course critically analyzes approaches to group practice in social work emphasizing socialization and resocialization purposes and leader activities. Research and practice issues are examined. Prereq: SW 600 or 601 or consent of instructor.

SW 624 PERSPECTIVES ON HUMAN SEXUALITY. (3)

An examination and study of historical and current perspectives of sexuality as it relates to behavioral patterns, cultural attitudes, social policy and practice. Prereq: Knowledge of human behavior and personality theory highly recommended. (Same as FAM 624.)

SW 626 FORENSIC MENTAL HEALTH: EVALUATION AND TREATMENT. (2-3)

An intensive analysis and study of forensic mental health including court evaluation, courtroom testimony and treatment of the victim. Students who wish to take this course for three credits will be expected to make an in-depth study of a specific content area. Lecture, two hours; laboratory (only for those taking the course for three hours), two hours per week. Prereq: Knowledge of behavior and personality theory is highly recommended.

SW 630 INTRODUCTION TO SOCIAL WELFARE POLICY AND SERVICES. (3)

This course reviews the history of the social welfare system and emphasizes the analysis of social programs and policies and of the policy-making process. An important focus of the course is to identify and understand the impact of a wide range of social policies on social work clients and the human service delivery system within a social justice framework. The course content reflects the interdisciplinary efforts of the social, political, legal, economic, and administrative processes which are vital to policy making at all levels. Prereq: Acceptance into the MSW program.

SW 635 INTRODUCTION TO PROFESSIONAL ETHICS IN SOCIAL WORK. (3)

This course introduces students to the place of ethics in professional social work practice, the philosophical formulations that underlie ethics and relevant concepts derived from these formulations. The course emphasizes the development of ethical reasoning and decision-making. Prereq: SW 600 or concurrent.

SW 640 FOUNDATION PRACTICUM. (3)

Students in this course engage in a generalist social work field placement under the direction of a faculty field professor and an agency field instructor. Through field education seminars students integrate knowledge, skills, and behaviors from prerequisite and concurrent courses, to demonstrate foundation social work practice with individuals, families, small groups, organizations and communities. The focus includes attention to context, policy, ethical considerations, the application of theory, and the use of research-informed interventions. Includes 300 hours per semester of seminar and experiential learning. Prereq: SW 600, 601, 602, 630, 635, 650 or concurrent.

SW 642 PSYCHOLOGICAL ASPECTS OF HUMAN AGING. (3)

Description and explanation of behavior, socialization and personality differentiation during the post-maturation developmental period: emotional aspects of aging; perception; intelligence; learning; motivation; normal and abnormal behavior; sexuality; life style. Prereq: SW 620 or equivalent, or consent of instructor.

SW 650 RESEARCH METHODS IN SOCIAL WORK. (3)

Introduction to systematic approaches to scientific thinking necessary for building knowledge and evaluating one's own practice. Includes ethical use of scientific inquiry, critical appreciation of quantitative and qualitative methodologies, and use of research for program evaluation. Prereq: Open only to students admitted to the graduate Social Work program.

SW 680 SPECIAL PROBLEMS IN SOCIAL WORK PRACTICE. (2-6)

Current issues that have special significance for social work practice. Selected problems in accordance with the needs and interests of the students registered for the course. May be repeated to a maximum of six credits. Prereq: Consent of instructor.

SW 701 ASSET-BASED AND SUSTAINABLE COMMUNITY ASSESSMENT AND DEVELOPMENT. (3)

This course is a practice course focusing on assessment and intervention in the Social and Community Development Concentration. The course examines the community context of

Course Descriptions

social work practice with an emphasis on neighborhoods, communities, and larger social systems that influence the quality of life. Models of community practice are presented to assess and intervene in social problems and social injustice that constrain opportunities and limit access to resources for individuals and families. Particular attention is given to the concept of asset-based development for building community capacity and empowering individuals and groups. Prereq: SW 721.

SW 702 SUBSTANCE MISUSE, VIOLENCE AND RISK MANAGEMENT. (3)

This course is designed to enhance students' clinical judgment and decision making with populations at high risk for victimization or perpetration of violence and substance misuse. It provides contemporary scientific and clinical knowledge and explores the associations of violence, child abuse, and mental disorders with substance misuse. Theories of addiction are explored with attention to genetic, familial, gender, geographical, and cultural contributions. Neurochemical and neuroanatomical correlates of addiction are explored. Assessment approaches and major interventions are analyzed and applied in practice sessions. Prereq: Completion of SW 600, SW 601, and SW 635, or admission to the MSW program with advanced standing, or permission of instructor.

SW 711 ADVANCED LEADERSHIP ROLES IN SOCIAL WORK. (3)

Advanced study and analysis of leadership roles in social work practice with emphasis upon administration and supervision. Some attention is given to consultation, staff development and teaching, and review of the theories of adult learning. Prereq: SW 701 or consent of instructor.

SW 718 CLINICAL DECISION MAKING AND JUDGMENT FOR SOCIAL WORK. (3)

This course provides the foundation for decision and judgment processes necessary for effective clinical social work practice, and is usually taken concurrently with the Psychopathology II course. Prereq: Admission to the Clinical Social Work concentration.

SW 720 SOCIAL WORK PERSPECTIVES ON HUMAN AND CULTURAL DIVERSITY. (2)

This second required course in the human behavior and social environment sequence builds upon the foundation course. The focus of this course is upon the effects of discrimination and oppression experienced by diverse population groups with special attention to the effects of racism, sexism, ageism, classism and geography upon vulnerable groups; and upon institutionalized societal and cultural themes in diversity; with implications for social work practice. Prereq: SW 620 or advanced standing in the MSW program. (Same as AAS 720.)

SW 721 POVERTY AND INEQUALITY. (3)

Poverty and inequality are among the most pervasive social problems of our time. According to the NASW code of ethics, tackling poverty is a primary goal for social workers. The course aims to unmask the complexities of poverty and inequality by introducing students to the nature and characteristics of poverty, examining the predominant explanations of poverty and inequality, exploring the consequences of poverty and inequality, and surveying historical and contemporary approaches to poverty reduction. Diverse perspectives will be presented through the course. Special attention will be given to issues related to values and ethics including social justice, human rights and well-being. Prereq: Admission to the Community and Social Development Concentration.

SW 722 PSYCHOPATHOLOGY FOR SOCIAL WORK PRACTICE. (3)

This course offers a survey of the major mental disorders typically encountered by social workers in clinical practice, protective services, family services, and other practice areas. It is designed to increase the social worker's working familiarity with diagnostic classifications, criteria, etiologies, and natural histories of disorders and social work treatments of disorders. Prereq: Admission into the MSW program with advanced standing or completion of SW 600, SW 601, and SW 635.

SW 724 ASSESSMENT AND TREATMENT PLANNING IN SOCIAL WORK. (3)

This course is designed to prepare the social worker to conduct structured, semi-structured and observational clinical assessments of adults, children, families and groups. Special attention will be paid to diagnostic assessments, substance use evaluations, lethality assessments, motivational interviewing, and other evidence-based and evidence-informed approaches. This course is designed to be taken after or concurrently with the clinical decision making course. Prereq: Admission to the clinical social work concentration; SW 718, SW 726 or concurrent.

SW 726 PSYCHOPATHOLOGY FOR CLINICAL SOCIAL WORK. (3)

This course provides the Master's level social work student an opportunity for advanced study of differential diagnostic assessment using the current edition of the Diagnostic and Statistical Manual of Mental Disorders. The course also provides an opportunity for more detailed study of the more common mental disorders seen in social work practice. In conjunction with the Decision Making course it provides an opportunity for advanced study of clinical decision making as it pertains to current mental health assessment. Prereq: SW 722, SW 702, admission to the Clinical Social Work concentration, SW 718 or concurrent.

SW 728 COMPARATIVE TREATMENT MODALITIES. (3)

This course builds on previous content related to clinical decision-making, psychopathology and clinical assessment, and is designed to 1) apply a range of intervention theories to children, adults, families and groups, 2) facilitate the student's capacity to conduct a comparative analysis of the approaches across common, conceptual, clinical, cultural and ethical domains, and to provide the forum for a critique of each approach using the latest empirical evidence on efficacy and effectiveness. Prereq: SW 718, SW 724, SW 726.

SW 730 EVIDENCE-BASED PRACTICE FOR SOCIAL WORKERS. (3)

This course offers an intensive study of three evidence based practices one for adult, one for children and one group intervention. It is designed to increase the social worker's familiarity with evidence based practices for social work treatment of mental health disorders. Prereq: SW 718, SW 724, and Psychopathology II.

SW 731 ADVANCED SOCIAL WELFARE POLICY AND ANALYSIS. (3)

This course builds on the social justice tradition and the policy analysis framework provided in SW 630 to prepare students to engage in the policy-making processes that impact and are impacted by the family and community service delivery system. Controversial issues within the child welfare, school social work, aging, and community development policy arenas are examined. Prereq: SW 721, SW 737.

SW 733 COMMUNITY-INFORMED ORGANIZATIONAL INTERVENTIONS. (3)

This course is an advanced Master's level class designed to explore the organizational context for creating change in communities. Students will be introduced to practice behaviors related to designing programs that respond to changing community demographics and needs and that promote inclusion of diverse community constituencies. The course emphasizes using community-based data and assessments and reflective learning models to evaluate programming and design program modifications and innovations that will benefit the community. Prereq: SW 721, SW 737, SW 701 or concurrent.

SW 734 CLINICAL SOCIAL WORK INTEGRATIVE SEMINAR. (3)

This seminar is taken by MSW students in their last semester to prepare for the comprehensive examination. Foundation level and concentration course content and practice behaviors will be reviewed to assist students to integrate their course of study. Prereq: SW 724 or concurrent.

SW 735 COMMUNITY AND SOCIAL DEVELOPMENT INTEGRATIVE SEMINAR. (3)

This seminar is taken by MSW students in their last semester to prepare for the comprehensive examination. Foundation level and concentration course content and practice behaviors will be reviewed to assist students to integrate their course of study. Prereq: SW 743 or concurrent.

SW 737 NON-PROFIT MANAGEMENT IN HUMAN SERVICE ORGANIZATIONS. (3)

This course focuses on social work management practices and leadership skills required in the development and management of non-profit organizations. With a particular focus on the human services delivery system, this course emphasizes achievement of human service goals and objectives through management control processes such as strategic planning, human resource management, program development and evaluation, finance, and advisory board governance. Prereq: SW 721 or concurrent.

SW 738 GUIDED INDEPENDENT WORK: MILITARY AND VETERAN POPULATIONS. (3)

This guided independent study is a graduate student-directed learning experience, for which faculty provide oversight and direction. Participation in SW 780 requires critical thinking and reflection regarding relevant material, conceptualization of an independent study project and the development of an electronic portfolio which addresses each learning outcome. Students will meet with the course instructor and/or other certificate-seeking students via electronic resources such as Echo 360, Adobe Connect, or Skype. The seminar instructor will determine the most effective means of communication with students, considering access to various web-based communication tools. Prereq: Admission to the Graduate Certificate in Military Behavioral Health; SW 530; FAM 759.

SW 740 CLINICAL SOCIAL WORK PRACTICUM. (3)

Students in this course engage in learning that prepares them to practice as clinical social workers at the advanced level. Students work in public and private agencies that provide services to a wide range of individuals (e.g., children, the elderly, persons with disabilities, etc.), families, and groups. Students will integrate knowledge, skills and behaviors from prerequisite and concurrent CSW concentration courses in field settings that provide opportunities to practice advanced clinical social work. Students will perform a variety of tasks including clinical decision-making, assessment and treatment planning. Includes 300 hours per semester of seminar and experiential learning. Prereq: SW 718, 724, 726, or concurrent. This class is to be taken concurrently with the SW 750 research course.

SW 740A CLINICAL SOCIAL WORK PRACTICUM I. (4)

This field-based course prepares students to practice as social workers at the advanced level in an area of concentration. Students perform a variety of tasks including assessment, case management, psycho-education, as well as individual, family, and/or community-based interventions. Placement in a human service agency and experiential learning of 300 hours including weekly seminars. Prereq: SW 640 or advanced standing.

SW 741 CSD PRACTICUM I. (3)

Students in this course engage in learning that prepares them to practice as social workers at the advanced level in public and private settings. Students work in government and non-profit community based agencies that provide services to a wide range of individuals (e.g., children, the elderly, persons with disabilities, etc.), families, and communities. Students will integrate knowledge, skills and behaviors from prerequisite and concurrent CSD concentration courses and will be engaged in work that provides opportunities to become competent social work practitioners at the organizational and macro levels. Students will perform a variety of tasks including in-depth agency/organizational assessment, policy analysis, and review of contexts that shape practice at the organizational level. Includes 300 hours per semester of seminar and

experiential learning. Prereq: SW 721, 737 or concurrent. This class is to be taken concurrently with the SW 751 research course.

SW 741A FAMILY AND COMMUNITY CONCENTRATION PRACTICUM I. (4)

This field-based course prepares students to practice as social workers at the advanced level in an area of concentration. Students perform a variety of tasks including assessment at the individual and community level, case-management, and individual, family, and community-based interventions. Placement in a human service agency and experiential learning of 300 hours including weekly seminars. Prereq: SW 721, 737 or concurrent. This class is to be taken concurrently with the SW 751 research course.

SW 742 CLINICAL SOCIAL WORK PRACTICUM II. (3)

This course builds on the experiences and activities of SW 740. Students in this course engage in learning that prepares them to practice as clinical social workers at the advanced level. Students work in public and private agencies that provide services to a wide range of individuals (e.g. children, the elderly, persons with disabilities, etc.), families, and groups. Students will integrate knowledge, skills and behaviors from prerequisite and concurrent CSW concentration courses in field settings that provide opportunities to practice advanced clinical social work. Students will perform a variety of tasks including clinical decision-making, assessment, treatment planning, evidence-based clinical intervention and research-informed evaluation of practice. Includes 300 hours per semester of seminar and experiential learning. Prereq: SW 740, SW 750, SW 728, SW 730 or concurrent.

SW 743 COMMUNITY AND SOCIAL DEVELOPMENT PRACTICUM II. (3)

This course builds on the experiences and activities of SW 741. Students in this course engage in learning that prepares them to practice as social workers at the advanced level in public and private settings. Students work in government and non-profit community based agencies that provide services to a wide range of individuals (e.g. children, the elderly, persons with disabilities, etc.), families, and communities. Students will integrate knowledge, skills and behaviors from prerequisite and concurrent CSD concentration courses and will be engaged in work that provides opportunities to become competent social work practitioners at the organizational and macro levels. Students will perform a variety of tasks including organizational and community assessment, advocacy, development and promotion of policy, research and evaluation, and development of community based interventions. Includes 300 hours per semester of seminar and experiential learning. Prereq: SW 741, SW 751, SW 701, SW 731, and SW 733 or concurrent.

SW 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

SW 750 CLINICAL SOCIAL WORK RESEARCH. (3)

This course builds on the introductory research class designed to study the processes of research in enhancing social work knowledge and developing effective social work practice. This course helps students develop the skills necessary to become sophisticated consumers of clinical research; execute single subject designs in clinical practice to assess and monitor progress, and participate in clinical intervention studies to test the efficacy and effectiveness of interventions. Prereq: SW 650 or advanced standing. This course is designed to be taken concurrently with SW 740.

SW 751 RESEARCH SKILLS FOR COMMUNITY AND SOCIAL DEVELOPMENT. (3)

This is an intermediate research course with an emphasis on program evaluation. The course will provide instruction in research methodology as well as research design. In addition, there is an emphasis on developing competencies and skills that will allow students to work with multifaceted research teams in diverse settings. Prereq: SW 650 or advanced standing. This course is designed to be taken concurrently with SW 741.

SW 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

SW 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely. Prereq: Successful completion of qualifying exam.

SW 770 DOCTORAL RESEARCH I. (3)

This course focuses on the role of research in the profession, the logic of research, the major strategies and techniques for conducting research in social work settings, and preparation of a research proposal. This is the first of a two-course sequence with a primary focus on quantitative methods. Prereq: Admission into the Social Work doctoral program.

SW 771 DOCTORAL RESEARCH II. (3)

In this second of two required research methods courses, students will conduct and report on the quantitative research project proposed in the first semester. They will also conduct a meta-analysis, test a research instrument's reliability and validity, conduct an exercise using qualitative methodology, and explore large public databases. Prereq: SW 770.

SW 773 DOCTORAL STATISTICS II. (3)

This social work course aims to help students understand and apply multivariate techniques in the fields of social welfare and social work research. Topics covered will include multivariate

regression, factor analysis, path analysis, event history analysis, as well as logit and probit analysis. Prereq: STA 570 or other graduate level statistics course.

SW 774 MENTAL HEALTH RESEARCH METHODS. (3)

This course will explore the principles and procedures that govern mental health research by examining the different ways researchers study mental health phenomenon. In this course, students will learn the skills to engage in the scientific investigation of significant mental health problems, and dissemination strategies utilized to transfer empirical findings into mental health practice and policy development. This course emphasizes aspects of methodological design essential for conducting meta-analysis, treatment, prevention and epidemiological research that may be outside the scope of a general research course. Prereq: SW 770 and SW 771 (SW 771 may be taken concurrently).

SW 780 INDEPENDENT WORK. (1-6)

Organized study, research and/or tutorial focused on special issues or problems. May be repeated to a maximum of six credits. Prereq: Major, graduate standing of 3.0 overall GPA, or consent of dean, and consent of adviser and instructor.

SW 781 THEORY DEVELOPMENT IN THE SOCIAL WORK PROFESSION. (3)

Explores the nature of knowledge, how it is generated and acquired. Students will distinguish explanatory from practice theory, understand paradigms as bases for ideas, recognize and formulate concepts, understand relational statements, theoretical statements, and how these relate to theory and data. Strategies for building knowledge will be discussed. Students will analyze theories into their components, construct mini-theories, and propose how they can be tested in social work practice. Prereq: Admission into the doctoral program or consent of the program director.

SW 782 ADVANCED ANALYSIS OF SOCIAL PROBLEMS, POLICY AND PRACTICE. (3)

This course provides students with a theoretical and conceptual framework for understanding social problems and their implications for macro social work practice. Critical perspectives related to social science theory will be identified, assumptions assessed, values examined, and empirical evidence analyzed. Theories covered will be drawn from sociological, socio-cultural, political, economic, historical and other perspectives. Students will be expected to develop their abilities to analyze and critique social problems and macro social work practice. Prereq: Admission into the doctoral program.

SW 783 HUMAN BEHAVIOR AND CHANGE THEORIES IN SOCIAL WORK PRACTICE. (3)

A critical analysis of theories which seek to explain human behavior and serve as foundations for current clinical change interventions; includes an examination of the empirical support for and efficacy of major treatment modalities used in social work practice. Prereq: Admission to the doctoral program.

SW 784 ETHICS, SOCIAL WORK AND SOCIETY. (3)

This course will identify and articulate the philosophical formulations of relevant ethical traditions and their implications for social work. Students will examine approaches to ethical analysis as well as major ethical problems facing contemporary social work. The course will emphasize the development of advanced ethical reasoning and decision-making skills. Prereq: Admission to the doctoral program and SW 781.

SW 785 PROSEMINAR IN SOCIAL WORK RESEARCH. (1)

This seminar introduces beginning doctoral students to the research activities of social work faculty and advanced students. Presentations will familiarize students with practical issues in the conceptual development and conduct of current research. May be repeated to a maximum of two credits. Prereq: Admission into the doctoral program.

SW 786 DOCTORAL RESEARCH PRACTICUM. (3-6)

Provides the doctoral student opportunity to conduct social work research under the supervision of a chosen faculty member. This experience is expected to result in one or more reports suitable for submission to a scholarly journal at conclusion of the practicum. Prereq: Completion of first year of doctoral study.

SW 787 DOCTORAL TEACHING PRACTICUM. (3-6)

Supervised teaching and other classroom experiences designed to prepare doctoral students to be social work educators. Prereq: Completion of first year of doctoral study.

SW 788 RESEARCH IN SOCIAL WORK SEMINAR. (3)

This course is designed to facilitate the student's completion of the dissertation prospectus and the dissertation itself. Students will make formal presentations on their research plans and will address available literature, measurement and methodological issues, analysis of data, limitations, and importance of the investigation. Prereq: Six hours doctoral level research.

SW 790 SEMINAR IN TEACHING AND LEARNING. (3)

Students will facilitate seminar sessions drawing upon educational theory and relevant literature, create syllabi, observe each other teaching, and develop papers elucidating their grading practices and philosophy of teaching. Prereq: Admission into the doctoral program or consent of instructor.

SW 795 ADVANCED DOCTORAL SEMINAR IN SOCIAL WORK (Subtitle required). (3)

Topics of current importance in Social Work research and practice, including philosophical, theoretical, ethical, and technical considerations. May be repeated to a maximum of twelve credits under different subtitles. Prereq: Admission to the joint Ph.D. program.

TA Theatre

TA 110 THEATRE: AN INTRODUCTION. (3)

This course provides an introduction and investigation in the analysis, research, production, and creative techniques central to the art of theatre. Student will read performance texts, attend live performances, and create a public performance. This online hybrid course will meet face-to-face one session per week.

TA 120 CREATIVITY AND THE ART OF ACTING. (3)

This course provides students with the tools to create their own, short, original works of theatre. Students will explore recent and current trends in theatre that allow performers to become creators of their own works. Students will examine the ways they can interpret language, literature, poetry, and dramatic texts to develop new ways to communicate their ideas in performance through the idiom of an ensemble.

TA 126 ACTING I: FUNDAMENTALS OF ACTING. (3)

A broad spectrum of skills will be explored in the creative process of acting ensemble. These skills include improvisation, movement disciplines (including theatre games, modern dance, and characterization), emotional and sensory awareness, and the process of integrating these into a clearly defined stage technique. Lecture, three hours; laboratory, two hours per week.

#TA 130 FRESHMAN CORNERSTONE. (1)

This course introduces students to best practices and opportunities for careers and strategies for success in theatre. Theatre faculty members lecture on their particular area of theatre and illustrate ways students can succeed in each discipline. Career development emphasis includes course work, internships and summer employment. Course required for theatre majors in the first spring semester of residency.

TA 150 CREATIVITY AND THE ART OF DESIGN AND PRODUCTION. (3)

A comprehensive study of the basic organizational structure, processes and techniques involved in theatre design, technology and management with particular reference to the UK Theatre.

TA 220 SHAKESPEARE PAGE TO STAGE. (3)

Shakespeare's plays were written to be performed, not read, and this course explores how to direct, act, and design his plays. The course explores techniques in directing, acting, and design, and examines famous stage and film productions of the last hundred years. The class culminates in design projects and student performances.

TA 225 VOCAL PRODUCTION FOR THE STAGE I. (3)

The theory and practice of stage diction. Mastery of these vocal techniques will lead the student to the eradication of regional speech patterns, an appreciation of vocal craft and discipline and an awareness of the diversity of vocal expression.

TA 236 ACTING: COMEDY STYLES. (3)

This course introduces student actors to a variety of comedy acting styles and techniques. Prereq: TA 126 or TA 120 or permission of instructor.

TA 237 ACTING: SCENE STUDY. (3)

An advanced lecture/laboratory course concentrating on acting techniques integral to the successful execution of scene work, including text analysis, character construction, improvisation, and stage behavior. Prereq: TA 120 or TA 126.

TA 260 STAGECRAFT. (3)

Study of theory, principles and techniques of stage construction. Assignments in laboratory and backstage during rehearsals and performances. Lecture, two hours; laboratory, five hours.

TA 265 COSTUME PRODUCTION. (3)

A study of the principles and techniques of costume construction. Lecture, one hour; laboratory, three hours per week.

TA 267 LIGHTING AND SOUND TECHNOLOGY. (3)

An introduction to lighting and sound practice in today's theatre. Lighting topics include use and maintenance of lighting equipment, photometrics, basic theatrical wiring and modern theatre systems. Sound topics include use of sound equipment for enhancement and reinforcement of theatrical productions and basic sound editing. Lecture, three hours; laboratory, two hours per week.

TA 275 STAGE MANAGEMENT. (3)

This lecture-studio course explores the role and responsibilities of the stage manager in academic, community, regional, and professional theatre settings.

TA 286 SOCIAL ACTION THEATRE. (3)

This course will explore applications of theatre practice and performance as they contribute to various cultures and/or community groups.

TA 300 SPECIAL PROJECTS IN THEATRE (Subtitle required). (1-3)

Reading, research, lecture and experimentation in a particular area of theatre history, theory, design and/or performance. This course will enable the student to link theory and practice to develop a role, or performances study for the stage. May be repeated to a maximum of twelve credits. Prereq: By audition or permission of instructor.

TA 311 AUDITION TECHNIQUES. (3)

This course is an introduction to basic theatre audition techniques. Prereq: TA 126 or TA 120 or equivalent.

TA 326 ADVANCED ACTING (Subtitle required). (3)

A course of advanced study focused on a significant acting style or performance tradition. Repeatable up to six credit hours. Prereq: TA 126 and TA 237 or permission of instructor.

TA 330 THEATRE DIRECTING I. (3)

Discussion and practice of the director's basic techniques, methods and responsibilities. Study of movement, interpretation of line, use of stage areas, use of levels, script analysis, and understanding dramatic action. Lecture, two hours; laboratory, two hours per week. Prereq: Major or consent of instructor.

TA 336 ADVANCED ACTING: CLASSICAL STYLES. (3)

A course of advanced study focused on three classical western acting styles from ancient Greece, Elizabethan England, Restoration England, or Neo-classic France. Prereq: TA 126 or TA 120; and TA 237.

TA 348 MUSICAL THEATRE TECHNIQUE. (3)

Musical Theatre Technique will provide students with a basic understanding of the specialized acting technique required to perform in the genre of musical theatre. Utilizing the literature of Musical Theatre, students will learn to coordinate dialogue, melody, lyrics, and staging for performance. Students will be exposed to a basic framework of musical theatre history, including notable directors, innovations, styles, and productions.

TA 350-352 TOPICS IN THEATRE. (3)

Reading, research, lecture and/or discussion in various areas of theatre history, technology and practice. May be repeated three times for a maximum of 12 hours when identified by different course subtitles. Prereq: Major or consent of instructor.

#TA 360 ADVANCED STAGECRAFT. (3)

This course complements and enhances the skills and methodologies learned in TA 260. Studies focus on the finer construction techniques used in the construction of stage properties, metalworking, and project planning. Prereq: TA 260.

TA 361 GRAPHICS FOR THEATRE. (3)

A studio course to develop the graphic skills in relation to theatrical design and technology. Sketching, rendering, mechanical drafting, pattern drafting, CAD, and relative computer programs are explored. May be repeated to a maximum of six hours. Prereq: TA 115 or TA 150 or consent of instructor.

TA 364 STAGE MAKEUP. (3)

Studio course in the application and design of makeup for the stage.

***TA 365 COSTUME DESIGN. (3)**

A lecture/studio course to teach basic skills in costume design through analysis, collaboration, research, and rendering. Lecture, one hour; studio, four hours per week.

***TA 367 LIGHTING DESIGN. (3)**

Theory, practice and design of lighting for the theatre. Examination of the practical and aesthetic requirements of lighting through research and analysis. Application of theory to light in a variety of contexts including theatre, opera, musicals and concerts. Lecture, three hours; laboratory, three hours per week.

TA 368 VISUAL STORYTELLING. (3)

Explore communicating a story through non-text based means using the visual medium of puppet and mask theatre and its associated techniques. May be repeated to a maximum of six hours.

***TA 369 SOUND DESIGN FOR THE THEATRE. (3)**

More sophisticated sound systems in movies theatres and home audio-visual systems raise the expectation of an integrated soundscape in theatrical productions. Our use of sound in theatre is rapidly changing and advancing; in the past 20 years we have gone from reel to reel tape recorder technology to iTunes to a fully digital design process. In this class you will learn how we develop and implement a sound design for a theatre production. This class will cover reading a script for sound, choice and acquisition of sound effects and music, recording and playback systems and integration of sound in the production process.

TA 370 STAGING HISTORY. (3)

A one-semester course dedicated to the research, development and creation of a "Docu-Drama" or Documentary Play based on a local, regional or national historic event, era or site.

***TA 374 SCENE DESIGN. (3)**

Process of evolving a scenic design through play analysis, research, metaphysical association and the assimilation of theatrical art forms against practical prescribed limitations. Practice in developing floor plans, elevations and simple sketching techniques. Lecture, two hours; laboratory, two hours.

TA 383 PLAY ANALYSIS. (3)

Student actors, designers, directors, playwrights and dramaturgs will be introduced to critical methodologies that can be applied to in-depth analysis of a variety of styles and genres of dramatic literature and performance. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

TA 384 BLACK THEATRE WORKSHOP. (3)

A workshop that explores the history, literature and performance of theater artists of the African diaspora. (Same as AAS 384.)

- TA 385 WORLD THEATRE I.** (3)
A multicultural and intercontinental exploration of the history, theory, dramatic literature, and practices of theatre from its earliest origins to 1800 c.e.
- TA 386 WORLD THEATRE II.** (3)
A multicultural and transnational examination of the history, theory, dramatic literature, and practices of theatre from 1800 to the present day. The second of two courses in a two semester sequence of World Theatre.
- TA 387 SEMINAR IN DRAMATIC LITERATURE (Subtitle required).** (3)
Advanced reading and discussion in theatre literature, theory and criticism. May be repeated to a maximum of 12 credits when identified by different course subtitles. Prereq: Major or permission of instructor.
- TA 388 HISTORY OF THE AMERICAN MUSICAL.** (3)
Beginning with the 1866 production of *The Black Crook*, the American Musical has appealed to audiences of every type. This course examines the history and development of the musical and analyzes the various types and styles of musical productions, including musicals that have been made into films. Particular attention is paid to investigating the musical as a manifestation of social, political, cultural values and norms.
- *TA 390 THEATRE PRACTICUM.** (1)
The study and practice of production, performance or directing techniques through rehearsal and performance. May be repeated to a maximum of eight credit hours. Prereq: Consent of instructor and filing of prospectus.
- #TA 392 DESIGN OR PRODUCTION ASSISTANT.** (1-3)
For students interested in design and technology, this course allows them to work under the direct supervision of a member of the design and technology faculty as they assist on a project for the UK Theatre Season. May be repeated to maximum of twelve credits. Prereq: Filing of a College of Fine Arts Learning Contract at time of registration and consent of chairperson.
- TA 395 INDEPENDENT WORK.** (1-3)
For undergraduate majors in theatre arts. Pursue independent work under the guidance of a staff member. Write a paper embodying the results of his research study and take an examination. May be repeated to a maximum of 12 credits. Prereq: Major, filing of prospectus at time of registration, and consent of chairperson.
- TA 399 FIELD BASED/COMMUNITY BASED EDUCATION.** (1-15)
A community-based or field-based experience in theatre, under the supervision of a faculty member. May be repeated to a maximum of 15 credits. Prereq: Consent of instructor and department chairperson; completion of departmental learning agreement. (Approval of Dean of Fine Arts required for more than six credits per semester.)
- TA 465 ADVANCED COSTUME EXPLORATION: (Subtitle required).** (3)
Advanced techniques in costume design, production and history are explored in a focused and guided environment. Hands on projects are designed to stimulate creativity in a closely mentored atmosphere. Maybe repeated up to nine hours under a different subtitle. Prereq: TA 265 or TA 365 or consent of instructor.
- TA 470 ADVANCED PROJECT IN DESIGN.** (3)
A continuation of course work in a student's chosen area of design and production (scenery, costumes, or lighting). The first half of the course will focus on the design, and the second half on the production of design. Lecture, one hour; studio, four hours per week. May be repeated to a maximum of six credits. Prereq: TA 260, TA 265, TA 267, and one of the following: TA 365, TA 367, TA 374; and consent of the instructor.
- #TA 474 SCENIC ART.** (3)
This is a studio course about scene painting, color theory, and their practical application for theatre, film, and interior design. This course will focus on classic faux finishes and painting techniques commonly used in the theatre industry. This course requires additional cost for supplies and participation in departmental (on campus) productions.
- TA 485 FRENCH THEATRE: CULTURE, TEXT AND PERFORMANCE.** (3)
This course will focus on a particular period or playwright's work from the canon of French Dramatic Literature, and explore the social and cultural world of the period and playwright. Course work will include a public performance, using both English and French languages. May be repeated to a maximum of six hours. Prereq: Premajor requirements must be completed, or consent of instructor. Some knowledge of French is helpful.
- TA 490 SENIOR CAPSTONE.** (1)
A capstone course in theatre. This course measures, through a comprehensive examination and rigorous exercises, the theatre student's retention of knowledge from the undergraduate experience and their preparedness for further education or the profession. Prereq: Senior standing, completion of core curriculum.
- TA 499 PROFESSIONAL THEATRE INTERNSHIP.** (1-12)
A professional theatre internship, which provides students with experiential learning in the area of theatre arts. The internship is identified and conducted under supervision of a Theatre Department faculty member. Students must file a learning contract with the College of Fine Arts. May be repeated to a maximum of 12 credits. Prereq: Overall GPA 2.5, upper division standing in major, or consent of instructor.
- TA 516 PLAYWRITING.** (3)
A course designed for students interested in creative drama. The completion of at least one play is required. May be repeated to a maximum of six credits. Prereq: Consent of instructor.
- TA 526 PLAYWRITING II.** (3)
An advanced workshop in the art and craft of playwriting. Prereq: TA 516.
- TA 530 EXPERIMENT IN DIRECTING.** (3)
This course exposes students to the directing styles of leading avant-garde 20th and 21st century stage directors from around the world. Each student will select a particular director to research, to document in writing, and to recreate the selected individual's directing style as an applied exercise. A student may repeat this three credit course selecting both a different time period and director to study; therefore, this course may be taken for up to six credit hours. Prereq: TA 330.
- †**TA 584 ASIAN THEATRE.**
- †**TA 587 GENDER AND PERFORMANCE (Subtitle required).**
- †**TA 600 ADVANCED STUDIES IN SCRIPT ANALYSIS.**
- †**TA 610 CRITICAL THEORIES AND PERFORMANCE.**
- †**TA 620 APPLIED RESEARCH IN THEATRE (Subtitle required).**
- †**TA 625 ADVANCED STYLES OF ACTING.**
- †**TA 630 DRAMATURGY.**
- †**TA 660 ADVANCED STUDIES IN DESIGN/TECHNOLOGY: (Subtitle required).**
- TA 690 PRODUCTION PRACTICUM.** (1)
The study and practice of production techniques through rehearsal and performance. May be repeated to a maximum of two credits. Prereq: Consent of instructor and filing of prospectus.
- TA 691 PERFORMANCE PRACTICUM.** (1)
The study and practice of acting and directing through rehearsal and performance. May be repeated to a maximum of two credits. Prereq: Consent of instructor and filing of prospectus.
- TA 692 DIRECTING/DRAMATURGY PRACTICUM.** (1-3)
The practice of directing or acting as dramaturg for a selected play script through rehearsal and performance phases. May repeat once to a maximum of six credits. Prereq: TA 730, consent of instructor and filing of prospectus.
- †**TA 725 SPECIAL PROBLEMS IN ACTING: (Subtitle required).**
- †**TA 730 ADVANCED STUDIES IN DIRECTING: (Subtitle required).**
- †**TA 739 INTERNSHIP IN THEATRE.**
- †**TA 748 MASTER'S THESIS RESEARCH.**
- †**TA 749 DISSERTATION RESEARCH.**
- †**TA 760 THEATRE PRACTICE: EFFECTIVE ARTISTIC COMMUNICATION.**
- †**TA 768 RESIDENCE CREDIT FOR MASTER'S DEGREE.**
- †**TA 769 RESIDENCE CREDIT.**
- †**TA 770 SEMINAR IN THEATRE: (Subtitle required).**
- †**TA 771 ADVANCED STUDIES IN THEATRE HISTORY: (Subtitle required).**
- †**TA 780 INDEPENDENT STUDY IN THEATRE.**
- †**TA 790 RESEARCH SYMPOSIUM.**

TAD

Dance

- TAD 140 INTRODUCTION TO DANCE.** (3)
This course will provide students with an introduction to the history, theory and principles of dance as a cultural and aesthetic form of expression. The class will provide students with fundamentals of movement while providing an opportunity to express themselves creatively through the use of improvisation, composition, and choreography. Creative results of these explorations will be shown as part of a public performance at the end of the semester.
- TAD 141 MODERN DANCE 1.** (2)
Foundations course in basic movement concepts of time, space, and energy, emphasizing technical development and creative exploration.
- TAD 142 BALLETT1.** (2)
Fundamentals of ballet technique designed to acquaint students with the dance form's basic principles, through exercises at the barre, center work, and movement combinations. Students will learn to observe, analyze, and perform classical ballet movements and acquire fundamental understanding of vocabulary, theory, and aesthetics of the art form.
- TAD 143 JAZZ DANCE 1.** (2)
Study of the technique and choreography of jazz dance genre from the early 20th century to present.

Course Descriptions

TAD 147 BEGINNING MUSICAL THEATRE DANCE. (2)

Beginning Musical Theatre Dance will provide students with a basic understanding of theatre dance fundamentals, styles and history. Students will gain a basic knowledge of fundamental dance technique. Utilizing vocabulary from ballet to jazz styles, students will hone basic dance skills and be exposed to a variety of theatre dance styles and "period" dances (relating to specific eras in dance history), and gain understanding of the basic framework of the theatre dance history, including notable choreographers, innovations, styles and shows.

TAD 241 MODERN DANCE 2. (2)

A continuation of Modern Dance I. Expands technique and theory through increasingly complex combinations and movement analysis, and introduces new technical vocabulary, style, and presentation. Prereq: TAD 141.

TAD 242 BALLET 2. (2)

A continuation of Ballet I, with extended technical and artistic ballet skills and the use of increasingly complex combinations, technical vocabulary, and emphasis on style and presentation. Prereq: TAD 142.

TAD 243 JAZZ DANCE 2. (2)

Intermediate jazz dance emphasizing contemporary techniques and styles. Prereq: TAD 143 and permission of instructor.

TAD 244 DANCE IMPROVISATION. (1)

This course will investigate essential elements of dance composition (time, space and energy) to create dances in, and of, the moment. Students will cultivate individual and ensemble awareness, and enhance their performance skills at the introductory level. Prereq: TAD 141 and permission of instructor.

#TAD 248 HIP HOP DANCE. (2)

This course draws on the hip hop aesthetic to create a movement experience that emphasizes a variety of hip-hop dance styles and individual form.

#TAD 341 MODERN DANCE 3. (2)

A continuation of Modern II, with extended technical and artistic modern skills and the use of increasingly complex combinations, technique, vocabulary, and emphasis on style and presentation at the advanced level. Prereq: TAD 241 or permission by the instructor.

#TAD 342 BALLET 3. (2)

A continuation of Ballet II, with extended technical and artistic ballet skills and the use of increasingly complex combinations, technical vocabulary, and emphasis on style and presentation at the advanced level. Prereq: TAD 242 or permission of the instructor.

#TAD 343 JAZZ DANCE 3. (2)

A more in-depth approach to the art of Jazz Dance, this course emphasizes technical and artistic skills based on a foundation of correct body alignment, movement isolation, rhythmic awareness, musicality, advanced vocabulary, auditioning and performance focus, strength, stamina, and flexibility at the advanced level. Prereq: TAD 243 or permission of the instructor.

***TAD 344 CHOREOGRAPHY 1. (2)**

This course explores the process of making dances, and studies the elements of dance composition, including the development of solo and group studies for class presentation. Prereq: TAD 244 or TAD 141, and TAD 241 or TAD 341.

TAD 347 ADVANCED MUSICAL THEATRE DANCE. (2)

An in-depth approach to Musical Theatre Dance, this course emphasizes technical and artistic skills based on a foundation of correct body alignment, movement isolation, rhythmic awareness, musicality, intermediate to advanced vocabulary, auditioning and performance focus, strength, stamina, and flexibility at the intermediate/advanced level. Dynamic range of Musical Theatre influences ranging from 19th century to present will be explored. Prereq: TAD 147.

TAD 370 DANCE HISTORY. (3)

The study of the evolution of dance through the cultural periods of history and the interrelation of the arts of social structure and dance forms.

TAD 392 DANCE PRACTICUM. (1)

The study and participation of dance production and performance through the rehearsal process of a dance concern or dance performance. The dance practicum is designed to give the student practical experience for general skills necessary for a career in the dance field. May be repeated up to 8 credits.

***TAD 444 CHOREOGRAPHY 2. (2)**

Choreography II is a course designed to continue to develop choreographic tools in duets and small groups in various dance genres. Focus is on structuring sophisticated choreographic works. Emphasis is placed on different kinds of creative processes and relationships between dancers. Prereq: TAD 344.

***TAD 447 STUDIES IN DANCE (Subtitle required). (1-3)**

Exploration and study of a particular style and/or genre of dance technique. Prereq: Permission of instructor.

#TAD 470 DANCE TEACHING METHODS. (3)

This course is designed to develop skills to teach all the major dance styles including ballet, jazz, modern dance techniques, creative movement and improvisation. Topics will include class creation, developing inventive teaching skills, methods of class preparation, ways of communicating and correcting, preparing age-appropriate material, choosing music, use of imagery and

teaching body awareness to students. Prereq: One of the following classes: TAD 141, TAD 142, TAD 143 or TAD 147, and permission from the instructor.

#TAD 492 SENIOR THESIS. (3)

This course is designed as a capstone experience, one in which students will incorporate dance technique, creativity, theory, and teaching, and infuse it into a community engagement project with high impact in a specific population, school, or organization in the area. Prereq: TAD 470 and permission of instructor.

TOX Toxicology

TOX 350 INTERDISCIPLINARY FORENSIC SCIENCES. (3)

This course broadly introduces the interdisciplinary field of Forensic Science. The class will survey the areas of (i) legal/scientific considerations in evidence collection, (ii) physico-chemical, biological-medical, computational, and sociological methods in evidence analysis and (iii) the professional and social implications of the application of these methods. Students will research, evaluate, and present information on, and lead discussion about, how the proper exercise of Forensic Science relates to representations of this discipline in popular media. Prereq: BIO 148 (lecture)+ BIO 155 (lab) and CHE 105 (or by permission of the instructor).

TOX 395 INDEPENDENT RESEARCH. (3-6)

An independent experimental research project for 3-6 credits in a contemporary area of Toxicology or Cancer Biology, under the mentorship of a department faculty member. May be repeated up to a maximum of 12 credits. A course research contract agreed to by the student and faculty mentor must be approved by the Course Coordinator (who is the Instructor of Record). Prereq: Must have passed at least 60 credit hours of coursework leading towards a Bachelor of Science or other degree in a life sciences- or health-related curriculum, or as otherwise in special cases approved by the Course Coordinator, in compliance with Senate policies.

TOX 409G TOXICOLOGY AND HUMAN HEALTH. (3)

Principles of Toxicology is a course for students in the biological and health sciences and others interested in understanding the major principles of toxicology and the consequences of toxins on human health and the environment. The course describes how different organs in the body respond to and biochemically metabolize toxins, the wide range of toxic agents present in the environment from pesticides to radiation, how the genome is affected by exposures, and special problems in toxicology that effect the world. Prereq: CHE 105 and 107 or equivalent general chemistry, BIO 148 and 152 or equivalent introductory biology, CHE 230 and 232 or equivalent organic chemistry.

TOX 508 RESEARCH METHODS IN TOXICOLOGY. (1-3)

The course provides students with 'hands on' experience in research methods used to solve toxicological problems. Students will be under the direction of a GCT faculty member, who will supervise the student's efforts on a research project. The student will be trained not only in the 'hands on' techniques but also in how to independently design and interpret research experiments. Students will prepare a final report on their research project, which will be designed to provide instruction and training in preparing 'publication-style' research reports. This course is distinct from 'topical seminar' or 'library survey' courses, since such courses are not 'hands on' in experimental methods. May be repeated to a maximum of six credits. Laboratory, two-six hours per week. Prereq: Status as upperclass undergraduate, post bac, or graduate student.

TOX 509 ENVIRONMENTAL AND REGULATORY TOXICOLOGY. (2)

Presentation of basic and advanced concepts to provide an integrated description of toxicology, its scope, the unique application of principles that characterize it as a science, and its professional practice. Emphases will include an extensive treatment of relationships between toxicology and environmental exposures and the influence of federal regulations on the practice of toxicology. Prereq: BCH 501 or BCH 401G or other equivalent or consent of instructor.

***TOX 560 ECOTOXICOLOGY. (4)**

Emphasis will be placed on the physiological and toxicological effects of chemicals on natural biota, including considerations at cellular, organismal, population, and community levels. This will include assimilation and metabolism of pollutants by animal species, with emphasis upon biochemical and physiological mechanisms involved in stress-induced responses and stress reduction. Additional areas of concern will include the transport, fate, and effects of chemical stressors on structure and function of biotic communities and will include introductions to ecotoxicology and environmental regulatory strategies. Prereq: CHE 105, CHE 107, BIO 150, BIO 153 and BIO 315 or BIO 350 or PGY 502 or equivalents or consent of instructor. (Same as PLS 560.)

TOX 600 ETHICS IN SCIENTIFIC RESEARCH. (1-2)

The course will commence with an overview of good laboratory practices and present them as the basis of good scientific research, along with an overview of quality assurance and appropriate practices in data analysis and data interpretation. The course will then move to the ethics of human and animal experimentation and discuss the concepts of data and intellectual property, their ownership and access to them. The problems of reviewing other workers' intellectual property such as grant applications, research papers and other intellectual property will be addressed. Prereq: Research experiences; consent of instructor. (Same as VS 600.)

TOX 649 ADVANCED MOLECULAR PHARMACOLOGY. (2)

This course will provide in-depth coverage of the molecular pharmacology of growth factors, transcription factors, receptors, and ion channels. Emphasis will be placed on both the normal functions of these cell-signaling molecules and perturbations that result in several prevalent

human diseases, including cancer, Alzheimer's, diabetes, osteoporosis, and inherited human illnesses. Students will be introduced to experimental approaches to diagnosing and treating these illnesses in the light of our evolving knowledge of molecular pharmacology. Prereq: IB5 601-606 or consent of instructor. (Same as PHA/PHR 649.)

TOX 680 MOLECULAR TOXICOLOGY AND CARCINOGENESIS. (3)
An intensive examination of 1) the key molecular and cellular mechanisms related to toxicity and carcinogenesis, and 2) the established relationships between exposures to toxicants and development of cancer and other human diseases. Prereq: TOX 509, TOX 663 or consent of Director of Graduate Studies.

TOX 690 PRACTICAL ANALYTICAL TOXICOLOGY. (3)
An evaluation of techniques for the isolation, identification, and quantitation of drugs, pesticides and other toxicants in biological samples. Concepts and theory will be presented in the lecture portion, while the laboratory will be devoted to actual sample analysis by the students. Lecture, 1 hour; laboratory, six hours. Prereq: Consent of the instructor and graduate standing in toxicology. (Same as VS 690.)

TOX 748 MASTER'S THESIS RESEARCH. (0)
Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

TOX 749 DISSERTATION RESEARCH. (0)
Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

TOX 767 DISSERTATION RESIDENCY CREDIT. (2)
Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

TOX 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)
May be repeated to a maximum of 12 hours.

TOX 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)
May be repeated indefinitely.

TOX 770 TOXICOLOGY SEMINAR. (0-2)
A specialized seminar focusing on current topics of toxicological significance. Registration each fall and spring semester required of all toxicology majors until residency requirements for the degree have been completed. May be repeated to a maximum of three times during a semester and for a maximum number of two credits during entire graduate course work.

TOX 780 SPECIAL PROBLEMS IN TOXICOLOGY. (2)
Exposure to and actual research experience in an area of toxicology other than that encountered by students in their thesis and dissertation research. May be repeated to a maximum of six credits. Prereq: Consent of graduate adviser.

TOX 790 RESEARCH IN TOXICOLOGY AND CANCER BIOLOGY. (1-6)
Research in Toxicology and Cancer Biology. Research will be conducted in specific areas of toxicology and cancer biology. Learning Outcomes: 1. Conduct independent, hypothesis driven research; 2. Demonstrate the ability to read, understand and apply the scientific literature that is relevant to the research activities; 3. Demonstrate the ability to develop original hypotheses, develop strategies and design experiments to test hypotheses; 4. Demonstrate competency in the collection, analysis and interpretation of data that is relevant to the research activities. Prereq: Consent of Director of Graduate Studies.

TSL Teaching English as a Second Language

#TSL 515 ENGLISH LANGUAGE DEVELOPMENT IN THE CONTENT CLASSROOM. (3)

This course is designed to engage class participants in the study of learning and teaching of ESL students in the PreK – 12 content classroom. The course is structured around two foundational knowledge bases for the field of ESL teaching: 1) the role of language and culture in school curriculum and classroom learning; 2) the challenges that content classes – math, science, and humanities – pose for English learners. The goal of the course is to prepare content teachers to effectively teach English learners both language and subject matter.

***TSL 560 LITERACY DEVELOPMENT IN THE ESL CLASSROOM. (3)**
This course is designed to introduce students to theory, research, and teaching applications of second language literacy development in the ESL classroom. This is a field-based course, and students will study current teaching methods of literacy instruction and apply those ideas with learners in an ESL setting. (Same as EDC 560.)

TSL 597 ESL TEACHING PRACTICUM. (3)
This course provides students with a supervised ESL teaching experience of 45 hours, and an additional 15 hours of course meetings with the supervisor to explore instructional strategies, classroom management issues and reflect upon their own development as teachers. The course is designed as the culmination of the TESL Graduate Certificate, and can be taken in the fall,

spring or summer terms. ESL teaching placements must be approved by the course instructor. Prereq: Students must be enrolled in the TESL Graduate Certificate course of study.

TSL 675 ENGLISH GRAMMAR: ANALYSIS AND PEDAGOGY. (3)
This course is designed to deepen students' explicit understanding of English grammar, with particular attention paid to grammatical structures most challenging for English language learners. The course explores the development of learner language, with a primary focus on the development of English grammatical competence. Issues in the teaching of English grammar are studied and applied to ESL teaching techniques and curriculum.

TSL 697 ESL INTERNSHIP. (3-9)
This course provides TESL MA students with a supervised ESL teaching experience of 90 hours, and an additional 15 hours of course meetings with the supervisor to explore instructional strategies, classroom management issues and reflection upon their development as ESL teachers. The course is designed as the culmination of the TESL MA program, and can be taken as a variable credit course (3 – 9 credits) in the fall, spring or summer terms. In order to fulfill the program internship requirements, a total of 9 credits must be completed. Prereq: Student must be in good standing in the TESL MA program.

TSM Technical Systems Management

#TSM 101 INTRODUCTION TO TECHNICAL SYSTEMS MANAGEMENT. (1)
An introduction to the technology, business, and management practices of agricultural, environmental, manufacturing, and machinery industries. Professionalism and career opportunities will be emphasized.

#TSM 203 BASIC PRINCIPLES OF SURVEYING. (3)
This course provides an introduction to the basic principles of surveying, the general use of surveying equipment, and basic surveying methods. This course is not intended for students who are seeking to become licensed surveyors. Lecture, two hours; laboratory, two hours. Prereq: A minimum of high school trigonometry, and enrollment in the College of Agriculture or consent of the instructor. (Same as AEN 203.)

TSM 220 PRINCIPLES OF INTERNAL COMBUSTION ENGINES. (3)
Principles of selection of internal combustion engines. Operating principles of internal combustion engines including fuel injection, ignition, lubrication and maintenance. Power transmission application and efficiency are considered. Lecture, two hours per week; lab, two hours per week. (Same as AEN 220.)

TSM 252 FABRICATION AND CONSTRUCTION FOR TECHNICAL SYSTEMS. (3)
Lecture, 1 hour; laboratory 4 hours. Wood and metal work, including reading engineering drawings, welding, power woodworking tools, soldering and pipe work. Prereq: Major in agricultural education, or Individualized Agriculture Curriculum (TSM), or a minor in TSM, or consent of instructor. (Same as AEN 252.)

TSM 340 PRINCIPLES OF FOOD ENGINEERING. (4)
The functional requirements and principles of operation of systems for the handling and processing of food and agricultural products are studied. The areas covered are mass and energy balances, fluid mechanics, heat transfer, refrigeration, food freezing, evaporation, drying and special topics such as extrusion and microwave heating. Prereq: Completion of PHY 211 and MA 123 or MA 113 or MA 137 and junior standing in Food Science major or Technical Management option in AICU. (Same as AEN 340.)

TSM 341 BREWING SCIENCE AND TECHNOLOGY. (3)
Introduction to the science and technology associated with the brewing of beer. Topics will include the history of beer, varieties of beer, and production of beer. Within the discussions about the production of beer, the effect of raw materials, processing, microbiology, and storage on the taste and appearance of the beer will be studied. The class will also cover beer appreciation and sensory perception, which will complement the discussions of science and technology in the production of beer. Prereq: All students must be 21 by the first day of class. (Same as AEN 341.)

TSM 370 FUNDAMENTALS OF OCCUPATIONAL SAFETY AND HEALTH. (3)
Basic principles of occupational safety and health that managers and technologists should know to operate knowledgeably and productively in a business environment. Topics will include the history of occupational safety and health, key laws and government agencies with an emphasis on the Occupational Safety and Health Administration (OSHA), accident/injury causation, safety behavior and psychology, hazard control, system safety, incident investigation, industrial hygiene, risk reduction, ergonomics, fire safety, hazardous materials, and the role of management at various levels. Although the class is not intended to create occupational safety and health professionals (specialists), it will provide important background should an employee of a small company be required to assume occupational safety and health responsibilities as part of larger job responsibilities.

TSM 461G BIOMETEOROLOGY. (3)
An introduction to the impact and relationship of the atmosphere on living organisms. Emphasis on the practical application of meteorology to everyday problems within the biosphere. Weather analysis, interpretation, psychometrics of the atmosphere, and the impact of weather and climate on animals, plants and man are discussed. Lecture, two hours; laboratory, two hours per week. Prereq: Junior, Senior, or Graduate standing. (Same as AEN 461G.)

UK University Wide

UK 090 DEVELOPMENTAL UNIVERSITY COURSE (Title to be assigned). (1-3)

This course allows offering of developmental topics to assist students to reach proficiency in an academic area prior to taking credit-bearing courses. This course is not available for degree credit towards a bachelor's degree. Each proposal must be approved by the Associate Provost for Undergraduate Education. A particular title may be offered no more than twice, after which a permanent course should be developed. Prereq: To be determined by the instructor.

#UK 095 ACADEMIC PREPAREDNESS PROGRAM QUANTITATIVE REASONING. (1)

UK 095 provides preparation for UK Core Liberal Arts Mathematics, MA 111, through individualized instruction offered in a laboratory setting. Students progress at their own pace to achieve course goals with assistance in class by an instructor and peer educator. Course topics include arithmetic, beginning algebra, problem solving, and applications (word problems). UK 095 is not recommended for students planning to take MA 109. Prereq: UK 095 is a required course for students scoring less than 19 on the Math ACT or less than 460 on the SAT AND less than 30 on the UK math placement exam.

#UK 096 ACADEMIC PREPARATION PROGRAM FOR COLLEGE ALGEBRA. (1)

UK 096 is one of two options to meet the requirements for College Readiness at UK. UK 096 provides accelerated preparation for MA 109. Topics include arithmetic, algebra, rational equations, polynomials, exponential functions, problem solving, and applications (word problems). Prereq: UK 095 or UK 096 is required for students scoring less than 19 on the Math ACT OR less than 460 on the SAT AND less than 30 on the UK math placement exam.

UK 100 UNIVERSITY COURSE (Title to be assigned). (1-3)

This course permits the offering at the introductory level of special courses of an interdisciplinary, topical, or experimental nature. Each proposal must be approved by the Associate Provost for Undergraduate Education. A particular title may be offered at most twice under the UK 100 number. Students may not repeat under the same title. Prereq: Will be set by instructor.

UK 101 ACADEMIC ORIENTATION. (1-2)

This course is designed to assist undergraduates in adjusting to the academic life of the University. Through lectures, discussions, exercises, and out-of-class assignments, UK 101 helps first-year students: articulate the purpose and nature of a college education at a research university; articulate UK's expectations of its students; gain an appreciation of the University's mission, history, and traditions; develop skills for achieving academic success such as study strategies and library research skills; increase awareness and use of campus resources; reflect on personal and social issues that first-year students often face in a college environment; become involved in the total life of the University; and form beneficial relationships with students, faculty, and staff.

UK 110 PASS/FAIL UNIVERSITY COURSE (Title to be assigned). (1-3)

This course permits the offering at the introductory level of special courses of an interdisciplinary, topical, or experimental nature. Each proposal must be approved by the Associate Provost for Undergraduate Education. A particular title may be offered at most twice under the UK 100 number. Students may not repeat under the same title. Prereq: Will be set by instructor.

UK 150 CAREER AND MAJOR EXPLORATION (Subtitle required). (1)

This course is designed to provide a basic structure for first- or second-year undergraduate students to discover career options based on interests and skills. Students will use self-exploration tools, speak with professionals in various industries, develop a resume, conduct informational interviews and produce a personal career action plan. Knowledge gained in this course will provide the structure to modify the plan as the student's interests may change over time.

UK 201 ACADEMIC ORIENTATION FOR TRANSFERS. (1)

This course is designed to assist transfer students in adjusting to the academic life at the University of Kentucky. Through lectures, discussions, exercises and out-of-class assignments, transfers will gain a better understanding of the challenges which they will encounter and, thus, will learn how to make effective use of the University's resources. Considerable attention will be directed to career planning and to the choice of a major. Offered on a pass/fail basis only. Lecture, two hours per week for seven weeks.

UK 300 UNIVERSITY COURSE (Title to be assigned). (1-3)

This course permits the offering of special courses of an interdisciplinary, topical, or experimental nature. Each proposal must be approved by the Associate Provost for Undergraduate Education. A particular title may be offered at most twice under the UK 300 number. Students may not repeat under the same title. Prereq: Will be set by instructor.

UK 301 CROSS-CULTURAL STUDIES (Subtitle required). (3)

A study of a non-Western or Third World culture (or cultures) through an examination of its cultural, artistic, social, political, economic or religious traditions. The particular culture(s) to be studied and the approach to be adopted will be determined by the instructor. Each course proposal must be approved by the Associate Provost for Undergraduate Education and students may not repeat the course under the same subtitle. May be repeated to a maximum of nine credits.

UKC UK Core Curriculum

UKC 100-109 INQUIRY IN ARTS AND CREATIVITY (Subtitle required). (3)

An inquiry-based, experimental course which may be used toward fulfillment of the arts and creativity requirement in the UK Core curriculum. All proposals must demonstrate that the course provides an environment for substantive, meaningful inquiry and must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 110-119 INQUIRY IN HUMANITIES (Subtitle required). (3)

An inquiry-based, experimental course which may be used toward fulfillment of the humanities requirement in the UK Core curriculum. All proposals must demonstrate that the course provides an environment for substantive, meaningful inquiry and must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 120-129 INQUIRY IN NATURAL/PHYSICAL/ MATHEMATICAL SCIENCES (Subtitle required). (3)

An inquiry-based, experimental course which may be used toward fulfillment of the natural/physical/mathematical science requirement in the UK Core curriculum. All proposals must demonstrate that the course provides an environment for substantive, meaningful inquiry and must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 130-139 INQUIRY IN SOCIAL SCIENCES (Subtitle required). (3)

An inquiry-based, experimental course which may be used toward fulfillment of the social science requirement in the UK Core curriculum. All proposals must demonstrate that the course provides an environment for substantive, meaningful inquiry and must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 140-149 COMPOSITION AND COMMUNICATION I: (Subtitle required). (3)

An experimental course which may be used toward fulfillment of the composition and communication I requirement in the UK Core curriculum. All proposals must demonstrate that the course engages students in composing and communicating ideas using speech, writing, and visuals in an active learning environment. Proposals must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 150-159 COMPOSITION AND COMMUNICATION II (Subtitle required). (3)

An experimental course which may be used toward fulfillment of the composition and communication II requirement in the UK Core curriculum. All proposals must demonstrate that the course engages students in composing and communicating ideas using speech, writing, and visuals in an active learning environment. Proposals must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 160-169 QUANTITATIVE FOUNDATIONS (Subtitle required). (3)

An experimental course which may be used toward fulfillment of the quantitative foundations requirement in the UK Core curriculum. All proposals must demonstrate that the course has an applications-driven, problem-solving focus, with particular attention to problems of potential real-life relevance. Students should be actively engaged in modeling and problem-solving. Proposals must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 170-179 STATISTICAL INFERENCE REASONING (Subtitle required). (3)

An experimental course which may be used toward fulfillment of the statistical inferential reasoning requirement in the UK Core curriculum. All proposals must demonstrate that the course is focused on the student's ability to evaluate the efficacy of claims based on statistical constructs and to understand and articulate important risks that these claims often address, using statistical reasoning and human inference. Proposals must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 180-189 U.S. CITIZENSHIP, DIVERSITY, COMMUNITY (Subtitle required). (3)

An experimental course which may be used toward fulfillment of the US citizenship, diversity and community requirement in the UK Core curriculum. Proposals must show the course provides a foundation for effective and responsible participation in a diverse society by preparing students to make informed choices in the complex or unpredictable cultural contexts that can arise in U.S. communities. Proposal must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 190-199 GLOBAL DYNAMICS (Subtitle required). (3)

An experimental course which may be used toward fulfillment of the global dynamics requirement in the UK Core curriculum. Proposals must show how the course focuses on the student's civic role and place in the world and the dynamic interaction between locale (place and people) and global processes (international and transnational). Proposals must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 300-309 INQUIRY IN ARTS AND CREATIVITY UPPER DIVISION (Subtitle required). (3)

An upper-division, inquiry-based, experimental course which may be used toward fulfillment of the arts and creativity requirement in the UK Core curriculum. All proposals must demonstrate that the course provides an environment for substantive, meaningful inquiry and must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 310-319 INQUIRY IN HUMANITIES UPPER DIVISION (Subtitle required). (3)

An upper-division, inquiry-based, experimental course which may be used toward fulfillment of the humanities requirement in the UK Core curriculum. All proposals must demonstrate that the course provides an environment for substantive, meaningful inquiry and must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 320-329 INQUIRY IN NATURAL/PHYSICAL/MATHEMATICAL SCIENCES UPPER DIVISION (Subtitle required). (3)

An upper-division, inquiry-based, experimental course which may be used toward fulfillment of the natural/physical/mathematical science requirement in the UK Core curriculum. All proposals must demonstrate that the course provides an environment for substantive, meaningful inquiry and must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 330-339 INQUIRY IN SOCIAL SCIENCES UPPER DIVISION (Subtitle required). (3)

An upper-division, inquiry-based, experimental course which may be used toward fulfillment of the social science requirement in the UK Core curriculum. All proposals must demonstrate that the course provides an environment for substantive, meaningful inquiry and must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 340-349 COMPOSITION AND COMMUNICATION I UPPER DIVISION (Subtitle required). (3)

An upper-division, experimental course which may be used toward fulfillment of the composition and communication I requirement in the UK Core curriculum. All proposals must demonstrate that the course engages students in composing and communicating ideas using speech, writing, and visuals in an active learning environment. Proposals must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 350-359 COMPOSITION AND COMMUNICATION II UPPER DIVISION (Subtitle required). (3)

An upper-division, experimental course which may be used toward fulfillment of the composition and communication II requirement in the UK Core curriculum. All proposals must demonstrate that the course engages students in composing and communicating ideas using speech, writing, and visuals in an active learning environment. Proposals must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 360-369 QUANTITATIVE FOUNDATIONS (Subtitle required). (3)

An upper-division experimental course which may be used toward fulfillment of the quantitative foundations requirement in the UK Core curriculum. All proposals must demonstrate that the course has an applications-driven, problem solving focus, with particular attention to problems of potential "real-life" relevance. Students should be actively engaged in modeling and problem-solving. Proposals must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 370-379 STATISTICAL INFERENCE REASONING UPPER DIVISION (Subtitle required). (3)

An upper-division experimental course which may be used toward fulfillment of the statistical inferential reasoning requirement in the UK Core curriculum. All proposals must demonstrate that the course is focused on the student's ability to evaluate the efficacy of claims based on statistical constructs and to understand and articulate important risks that these claims often address, using statistical reasoning and human inference. Proposals must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 380-389 U.S. CITIZENSHIP, DIVERSITY, COMMUNITY UPPER DIVISION (Subtitle required). (3)

An upper-division experimental course which may be used toward fulfillment of the US citizenship, diversity and community requirement in the UK Core curriculum. Proposals must show the course provides a foundation for effective and responsible participation in a diverse society by preparing students to make informed choices in the complex or unpredictable cultural contexts that can arise in U.S. communities. Proposal must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

UKC 390-399 GLOBAL DYNAMICS UPPER DIVISION (Subtitle required). (3)

An upper-division experimental course which may be used toward fulfillment of the global dynamics requirement in the UK Core curriculum. Proposals must show how the course focuses on the student's civic role and place in the world and the dynamic interaction between locale (place and people) and global processes (international and transnational). Proposals must be approved by the Associate Provost for Undergraduate Education. Students may not repeat under the same subtitle. May be repeated up to a maximum of 6 credits under a different subtitle.

USP University Studies Program

USP 100-109 NATURAL SCIENCES (Subtitle required). (3)

An introductory course of an interdisciplinary, topical, or experimental nature which may be used toward partial fulfillment of the natural science requirement in the University Studies Program. Each proposal must include the discipline in which the course is being offered and the options available to the student to complete the USP natural science requirement. Each proposal must be approved by the Associate Provost for Undergraduate Education.

USP 110-119 SOCIAL SCIENCES (Subtitle required). (3)

An introductory course of an interdisciplinary, topical, or experimental nature which may be used toward partial fulfillment of the social science requirement in the University Studies Program. Each proposal must include the discipline in which the course is being offered and the options available to the student to complete the USP social science requirement. Each proposal must be approved by the Associate Provost for Undergraduate Education.

USP 120-149 HUMANITIES (Subtitle required). (3)

An introductory course of an interdisciplinary, topical, or experimental nature which may be used toward partial fulfillment of the humanities requirement in the University Studies Program. Each proposal must include the discipline in which the course is being offered and the options available to the student to complete the USP humanities requirement. Each proposal must be approved by the Associate Provost for Undergraduate Education.

VS Veterinary Science

VS 307 GENETICS OF HORSES. (3)

This course covers the basic principles of genetics and genomics with specific applications to the horse including evolution, coat color genetics, hereditary diseases, cytogenetics, genetics of performance, pedigree studies, population genetics of horse breeds and the genetic relationship among members of the order Perissodactyla. Prereq: BIO 148, BIO 152, CHE 107, CHE 113 or consent of instructor.

VS 350 INTRODUCTORY ANATOMY, PHYSIOLOGY, AND ANIMAL HYGIENE. (3)

A study of anatomy and physiology as related to courses in livestock production, judging, nutrition, meats and diseases, and introduction to the basic mechanism of animal disease and the relationship of animal hygiene.

VS 351 PRINCIPLES OF ANIMAL HYGIENE AND DISEASE CONTROL. (3)

A study of animal sanitation and disease control management. The course will acquaint students with the more important infectious, toxic, metabolic and parasitic diseases of domestic animals and will emphasize preventive concepts.

VS 395 SPECIAL PROBLEMS IN VETERINARY SCIENCE. (1-4)

Prereq: VS 350, 351, and consent of instructor. May be repeated to a maximum of six credits.

VS 500 ADVANCED EQUINE REPRODUCTION. (3)

A study of reproductive anatomy and physiology of the horse with emphasis on normal and abnormal reproductive function in this species. Normal reproductive management and diseases affecting the reproductive system will be considered in detail. Prereq: ASC 364.

VS 597 SPECIAL TOPICS IN VETERINARY SCIENCE. (1-3)

Special topical or experimental courses in Veterinary Science for graduate and advanced undergraduate students. Special subtitle required and must be approved by the chair of Veterinary Science. Students may not repeat under the same subtitle. Prereq: Determined by instructor.

VS 600 ETHICS IN SCIENTIFIC RESEARCH. (1-2)

The course will commence with an overview of good laboratory practices and present them as the basis of good scientific research, along with an overview of quality assurance and appropriate practices in data analysis and data interpretation. The course will then move to

the ethics of human and animal experimentation and discuss the concepts of data and intellectual property, their ownership and access to them. The problems of reviewing other workers' intellectual property such as grant applications, research papers and other intellectual property will be addressed. Prereq: Research experiences; consent of instructor. (Same as TOX 600.)

VS 690 PRACTICAL ANALYTICAL TOXICOLOGY. (3)

An evaluation of techniques for the isolation, identification, and quantitation of drugs, pesticides and other toxicants in biological samples. Concepts and theory will be presented in the lecture portion, while the laboratory will be devoted to actual sample analysis by the students. Lecture, 1 hour; laboratory, six hours. Prereq: Consent of the instructor and graduate standing in toxicology. (Same as TOX 690.)

VS 748 MASTER'S THESIS RESEARCH. (0)

Half-time to full-time work on thesis. May be repeated to a maximum of six semesters. Prereq: All course work toward the degree must be completed.

VS 749 DISSERTATION RESEARCH. (0)

Half-time to full-time work on dissertation. May be repeated to a maximum of six semesters. Prereq: Registration for two full-time semesters of 769 residence credit following the successful completion of the qualifying exams.

VS 767 DISSERTATION RESIDENCY CREDIT. (2)

Residency credit for dissertation research after the qualifying examination. Students may register for this course in the semester of the qualifying examination. A minimum of two semesters are required as well as continuous enrollment (Fall and Spring) until the dissertation is completed and defended.

VS 768 RESIDENCE CREDIT FOR THE MASTER'S DEGREE. (1-6)

Residence credit while completing research and writing thesis. Prereq: Completion of course requirements for the MS. May be repeated to a maximum of 12 hours.

VS 769 RESIDENCE CREDIT FOR THE DOCTOR'S DEGREE. (0-12)

May be repeated indefinitely.

VS 770 VETERINARY SCIENCE SEMINAR. (1)

Required of graduate students in veterinary science. May be repeated to a maximum of six credits. Prereq: Consent of staff.

VS 777 CURRENT LITERATURE IN EQUINE REPRODUCTION. (1)

Advanced study of current topics in equine reproduction. The course is comprised of student-led discussions based upon readings taken from current and classic literature in the discipline. Emphasis will be placed on the critical analysis and understanding of the experimental basis for current concepts in equine reproduction.

VS 781 CORRELATIVE PATHOLOGY. (1-3)

Supervised experience in the use of clinical, gross and histopathological technics in the differential and definitive diagnosis of diseases. May be repeated to a maximum of nine credits. Prereq: Pathology in D. V. M. curriculum or equivalent and consent of staff.

VS 782 ADVANCED VIROLOGY. (3)

Current trends in virology. Typical topics include DNA tumor viruses, RNA tumor viruses, persistent virus infections, and interference. Emphases of molecular mechanisms. Prereq: BIO 582. Adequate biochemistry and genetics strongly recommended, or consent of instructor. (Same as BIO 782.)

VS 785 ADVANCED VETERINARY PARASITOLOGY. (3)

Experimental methodology and host-parasite relationships of the protozoan and helminth parasites of domestic animals. Prereq: Parasitology in D. V. M. curriculum or equivalent and approval of staff.

VS 786 ADVANCED VETERINARY PATHOLOGY. (3)

Specialized instruction in techniques and interpretations of pathology and pathologic anatomy. Emphasis will be upon evaluation of lesions for understanding the pathogenesis of disease processes in the living animal. Prereq: Pathology in D. V. M. curriculum or equivalent and approval of staff.

VS 791 TECHNIQUES IN VETERINARY MICROBIOLOGY. (1-9)

Independent research in veterinary microbiology. May be repeated to a maximum of 24 credits. Prereq: Consent of staff.

VS 792 TECHNIQUES IN GENERAL VETERINARY PATHOLOGY. (1-9)

Independent research in veterinary pathology. May be repeated to a maximum of 24 credits. Prereq: Consent of staff.

WRD

Writing, Rhetoric and Digital Media

WRD 110 COMPOSITION AND COMMUNICATION I. (3)

Composition and Communication I is the introductory course in a two-course sequence designed to engage students in composing and communicating ideas using speech, writing, and visuals. Students will develop interpersonal communication, critical thinking, and information literacy skills by exploring what it means to be engaged, twenty-first century citizens. Students will practice composing, critiquing, and revising ideas based on personal experience, observation, and fieldwork in the community, culminating in several discrete projects using oral, written, and visual modalities.

WRD 111 COMPOSITION AND COMMUNICATION II. (3)

Composition and Communication II is the second of two general education courses focused on integrated oral, written, and visual communication skill development emphasizing critical inquiry and research. In this course, students will explore issues of public concern using rhetorical analysis, engage in deliberation over those issues, and ultimately propose solutions based on well-developed arguments. Students will sharpen their ability to conduct research; compose and communicate in written, oral, and visual modalities; and work effectively in groups (dyads and small groups). A significant component of the class will consist of learning to use visual and digital resources, first to enhance written and oral presentations and later to communicate mass mediated messages to various public audiences. Over the course of the semester, class members can expect to work independently, with a partner, and in a small group (team) to investigate, share findings, and compose and deliver presentations, as well as to practice and evaluate interpersonal and team dynamics in action. Prereq: CIS 110 or WRD 110.

WRD 112 ACCELERATED COMPOSITION AND COMMUNICATION II (WRD). (3)

WRD 112 is an accelerated version of the Composition & Communication II UK Core requirement. WRD 112 focuses on integrated oral, written, and visual communication skill development and emphasizes critical inquiry and research. Students will sharpen their ability to conduct research; compose and communicate in written, oral, and visual modalities; and use interpersonal skills to work effectively in groups. Prereq: AP English Composition score of 4 or 5, an ACT English score of 32 or higher, an SAT verbal score of 720 or higher, or acceptance into the University's Honors Program.

WRD 130 INTRODUCTORY WORKSHOP (Subtitle required). (1-3)

Flexible course hours that supplement an existing course or provide introductory training in a particular area of writing, rhetoric, or digital studies. Repeatable up to 6 hours.

WRD 203 BUSINESS WRITING. (3)

Instruction and experience in writing for business, industry, and government. Emphasis on clarity, conciseness, and effectiveness in preparing letters, memos, and reports for specific audiences. Prereq: Completion of University Writing requirement or new general education Communications (6 hour) sequence. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

WRD 204 TECHNICAL WRITING. (3)

Instruction and experience in writing for science and technology. Emphasis on clarity, conciseness, and effectiveness in preparing letters, memos, and reports for specific audiences. Prereq: Completion of University Writing requirement. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

WRD 205 WRITING AND RHETORIC (Subtitle required). (3)

An open topics writing course focused on rhetorical analysis of issues of academic, political, social, or cultural significance. Students will interpret, analyze, and evaluate rhetorical strategies employed in print and digital texts. Prereq: Completion of Composition and Communication requirement or consent of instructor.

WRD 208 MULTIMEDIA WRITING. (3)

This course develops a practical understanding of writing and rhetoric through multimedia platforms and artifacts. Students will produce and publish to the web in a range of media such as digital video and photography, blogs, wikis, podcasts, and comics. Prereq: Completion of Composition and Communication requirement or consent of instructor.

WRD 210 SOCIAL MEDIA: THEORY, CULTURE, POLITICS, PRACTICE. (3)

The course examines how social media and the writing practices we employ influence notions of what it means to participate in community, society, and public discourse. Students will compose across different social media platforms and explore theoretical literature to examine the ways these tools are evolving. Prereq: Completion of Composition and Communication requirement or consent of instructor.

#WRD 222 CURRENT EVENTS AND PUBLIC ENGAGEMENT: U.S. CITIZENS, GLOBAL CITIZENS. (3)

Introductory course exploring rhetoric and current events focusing on the ways in which noteworthy local/global events are written, argued, and analyzed in public forums. Special emphasis on exploring rhetorical constructions of citizenship. Prereq: Completion of WRD/CIS 110 or equivalent, or consent of instructor.

- WRD 225 CRAFT WRITING.** (3)
Instruction and practice in writing for the food and beverage industry. Emphasis on the history and culture of the craft beer industry and common practices in written and digital communication, argumentation and persuasion, narrative, and engagement with social media. Prereq: Completion of Composition and Communication requirement or consent of instructor.
- WRD 300 INTRODUCTION TO WRITING, RHETORIC, AND DIGITAL STUDIES.** (3)
This course introduces students to the theory of rhetoric and composition. Students may examine the theoretical, ethical, and stylistic issues connected to writing in various rhetorical situations, including digital environments. The course forms a theoretical foundation for all other WRD courses and is required for all WRD majors. Prereq: Completion of Composition and Communication requirement or consent of instructor.
- WRD 301 STYLE FOR WRITERS.** (3)
This course is designed for those who wish to improve their own writing style or the style of others. While the course may include some account of historical changes in prose style and require some stylistic analysis of literary texts, the emphasis is on editing contemporary prose, both in exercises and in the students' own writing. Students will learn and practice principles such as economy, coordination, subordination, precision, parallelism, balance, coherence, rhythm, clarity, and grace. Provides ENG Major Elective credit and ENG minor credit. Prereq: Completion of UK Core Composition and Communication I-II requirement or equivalent. (Same as ENG 301.)
- WRD 302 THE ESSAY.** (3)
Intensive writing and reading in the genre of the essay. The course will explore the conventions of the essay and may analyze historical changes in the genre or survey well-known essayists such as Montaigne and Woolf. Students will write essays and analyze the stylistic choices of professional essayists in order to inform their own writing in the genre. Prereq: Completion of Composition and Communication requirement and consent of instructor.
- WRD 304 WRITING IN THE SOCIAL SCIENCES.** (3)
Instruction and practice with the major genres and argumentative structures of writing in the social sciences. Special emphasis on – and practice with – the written norms that shape disciplinary knowledge in social scientific fields. Prereq: Completion of Composition and Communication requirement or consent of instructor. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.
- WRD 305 WRITING PUBLIC SCIENCE.** (3)
Instruction and practice with popular audience genres and arguments in and about science, intended for both science and non-science majors. Prereq: Completion of Composition and Communication requirement or consent of instructor.
- WRD 306 INTRODUCTION TO PROFESSIONS IN WRITING.** (3)
This course offers an introduction to and preparation for careers in the teaching of writing, professional writing, publishing, and editing. Prereq: Completion of Composition and Communication requirement or consent of instructor.
- WRD 308 VISUAL RHETORIC.** (3)
This course introduces visual rhetoric, covering its history, current practice, and possible futures. Utilizing the disciplinary tools of rhetoric, students will compose in textual and visual modes, learning a variety of methods with which to create and critique visuals. Prereq: Completion of Composition and Communication requirement or consent of instructor.
- #WRD 310 WRITING IN THE NATURAL SCIENCES.** (3)
Instruction and practice with the major genres and argumentative structures of writing in the natural sciences. Special emphasis on – and practice with – the written norms that shape disciplinary knowledge in the natural sciences. Prereq: Completion of the Composition and Communication requirement and junior standing, or consent of instructor.
- WRD 311 HISTORY OF THE DOCUMENTARY.** (3)
This course is designed to trace the evolution of the documentary film. Although the emphasis will be on the development of the American documentary, students will also be looking into contributions from across the world. Prereq: Completion of Composition and Communication requirement or consent of instructor.
- WRD 312 INTRODUCTION TO DOCUMENTARY.** (3)
This course is dedicated to critical examination of approaches to the documentary, and the construction of a documentary of one's own. Students will examine different strategies, structures, and topics, with an eye to production. Prereq: Completion of Composition and Communication requirement and consent of instructor.
- WRD 320 RHETORICAL THEORY AND HISTORY.** (3)
This course introduces students to the scholarly study of rhetoric by exploring the interrelationship of theory, criticism, and practice within a particular historical context. Prereq: Completion of Composition and Communication requirement or consent of instructor.
- WRD 322 RHETORIC AND ARGUMENT.** (3)
This course examines theories of rhetorical argument. Students read rhetorical theorists who speculate about what makes certain speech persuasive, as well as contemporary rhetoricians who are actually creating persuasive written and oral texts. Students use these theories to analyze and construct original arguments. Prereq: Completion of Composition and Communication requirement or consent of instructor.
- WRD 324 WRITING CENTER PEER TUTORING.** (3)
An undergraduate seminar that prepares qualified undergraduate students to become engaged and effective peer consultants in the UK Writing Center. Students in the course are actively involved in reading, writing, listening, observing, speaking, researching, and presenting as they become immersed in the theory and practice of Writing Center consulting. Prereq: Completion of Composition and Communication requirement and consent of instructor.
- WRD 395 INDEPENDENT STUDY.** (1-3)
For undergraduate majors in WRD with a standing of 3.0 in the major and permission of the Director of Undergraduate Studies. Each student pursues a course independently under the guidance of a faculty member and produces at least one major project. Prereq: Standing of 3.0 in the major and permission of the Director of Undergraduate Studies.
- WRD 399 INTERNSHIP.** (1-6)
Internship in the community that brings together the student's critical and practical knowledge of writing, rhetoric, or digital media. In addition to evaluation by the internship supervisor for the course grade, the students will produce a reflective research project that may be presented in an annual public research forum. Repeatable up to 6 hours. Prereq: Completion of Composition and Communication requirement and consent of Internship Supervisor.
- WRD 401 SPECIAL TOPICS IN WRITING (Subtitle required).** (3)
Studies of special topics in writing, in areas such as literary nonfiction (essays), responding to literature, cultural critique, and composing law and justice. Topics announced the preceding semester. May be repeated under different subtitles to a maximum of six credits. Does not fulfill ENG major 400-level course requirement. Provides ENG Major Elective credit and ENG minor credit. Prereq: Completion of UK Core Composition and Communication I-II requirement and consent of instructor. (Same as ENG 401.)
- WRD 402 AUTOBIOGRAPHICAL COMPOSITION (Subtitle required).** (3)
A special topics course which examines a particular medium of autobiographical composition (textual, digital, or performative) and/or the ways autobiographical composing is used in particular contexts or communities. Students study and produce autobiographical composition. Mode of composing (print, digital, performance, or a combination) is at the discretion of the instructor. Repeatable up to 6 hours under different subtitles. Prereq: Completion of Composition and Communication requirement or consent of instructor.
- WRD 405 EDITING ENGLISH PROSE.** (3)
This course is designed for students interested in the basics of editing and publishing and offers instruction and extensive practice in editing and revising both the student's own writing and the prose works of others. In addition to learning techniques of revision, verification of sources, and preparation of manuscripts, students will be expected to learn about the editing profession generally and to follow trends in editing and publishing. Not for students with writing deficiencies. Does not fulfill ENG Major 400-level course requirement. Provides ENG Major Elective credit and ENG Minor credit. Prereq: WRD 301, or WRD 306, or consent of instructor. (Same as ENG 405.)
- WRD 406 TOPICS IN PROFESSIONAL WRITING (Subtitle required).** (3)
This course addresses contemporary genres of professional writing, including professional correspondence, reports, and social media most often found in business, technical, and scientific communities. The course also addresses the common tools and technologies of professional writing production and practice. Prereq: WRD 204 or WRD 306 or consent of instructor.
- WRD 408 DIGITAL COMPOSING.** (3)
This course provides grounding in the analysis and theory of digital composition, which will inform personal, professional, or community-based projects. Projects will encourage students to work flexibly across various digital platforms. Prereq: WRD 308 or consent of instructor.
- WRD 410 RHETORIC AND POPULAR CULTURE (Subtitle required).** (3)
Special topics exploring rhetoric and popular culture, with a focus on the everyday persuasion and influence generated through films, music, television, social media, and other forms of public discourse. Repeatable up to 6 hours. Prereq: Completion of Composition and Communication requirement or consent of instructor.
- WRD 412 INTERMEDIATE DOCUMENTARY PRODUCTION.** (3)
This course explores a range of documentary approaches and styles, after which workshop and production of students' own documentaries will be emphasized. Students will focus on particular approaches and subjects to develop their individual signatures and styles. Prereq: Completion of WRD 312 or consent of the instructor.
- #WRD 418 LEGAL WRITING.** (3)
Introduction to the written genres and argumentative structures most common to legal professions. Special emphasis on – and practice with – the rhetorical norms of research and writing in law-related contexts. Prereq: Completion of Composition and Communication requirement or consent of instructor.
- WRD 420 RHETORICAL TRADITIONS (Subtitle required).** (3)
This course offers a detailed examination of the history and theory of a specific rhetorical tradition or group of traditions. Students will gain familiarity with key concepts and terms in a rhetorical tradition, compare and contrast culturally situated definitions of rhetoric, and better understand the way rhetorical historiography influences how rhetorical traditions are defined and taught. Repeatable up to 6 hours under different subtitles. Prereq: Completion of WRD 320 or consent of instructor.

Course Descriptions

WRD 422 PUBLIC ADVOCACY (Subtitle required). (3)

This course examines the work that writing does in the world by connecting the study of persuasion in specific social movements, campaigns, and genres with opportunities for students to create texts and campaigns. This course may offer a historical or contemporary focus, and may examine local, regional, national, or transnational movements. Prereq: Completion of WRD 320 or WRD 322 or consent of the instructor.

WRD 425 ENVIRONMENTAL WRITING. (3)

Students will consider the ways writers address environmental issues by exploring various forms of environmental writing, from personal narrative to literary nonfiction to advocacy. Prereq: Completion of Composition and Communication requirement or consent of instructor.

WRD 430 ADVANCED WORKSHOP (Subtitle required). (1-3)

Flexible course hours that supplement an existing course or provide advanced training in a particular area of writing, rhetoric, or digital studies. Prereq: Completion of Composition and Communication requirement or consent of instructor. This course is a Graduation Composition and Communication Requirement (GCCR) course in certain programs, and hence is not likely to be eligible for automatic transfer credit to UK.

#WRD 612 ETHICAL AND LEGAL ISSUES IN TECHNICAL WRITING. (3)

Study of legal and ethical issues faced by technical writers.

#WRD 614 VISUAL RHETORIC AND PERSUASION. (3)

Study of visual methods or persuasion in technical and professional writing.

#WRD 702 PROFESSIONAL AND TECHNICAL WRITING. (3)

Study in advanced topics in professional and technical writing. Special emphasis on theoretical and practical issues in professional and technical writing. Prereq: Admission to the graduate program or consent of instructor.

#WRD 704 TECHNICAL EDITING. (3)

Study of technical editing and methods relevant for professional editing, including drafting, editing, and proofreading. Prereq: Admission into the Graduate Certificate in Technical Writing Program.
