Analytical activities are rapidly expanding in businesses, government and not-for-profit organizations. For the modern enterprise, problems in practically every domain are being formulated as models, which are then used to analyze data – producing explanations and predictions to help solve these problems. Using potentially vast volumes of data, these models are implemented and solved via computers – generating solutions that must then be interpreted and appropriately applied in decisional processes. This course leads students through the steps of model formulation, solution, interpretation, and application in such crucial decision domains as investment, scheduling, production, inventory, and logistics. It furnishes hands-on experiences with such widely used modeling techniques as linear programming, network flow programming, and multiple-objective decision modeling. Prereq: Completion of all college pre-major requirements and admission to Upper Division in Business and Economics. Non-B&E Upper Division undergraduate students may be enrolled with the consent of the instructor. (Same as MKT 306.)

Examples of prior individual work include: Lean Logistics, Website Design & Implementation, Enterprise Resources Planning, Materials Requirement Planning, Lot Sizing, Advanced Six Sigma, Programming in Java, and Database Design. A course of independent study may not be requested/offered for material that is already covered in the normal curriculum, except under extenuating circumstances. May be repeated to a maximum of six credits. Prereq: Completion of all college pre-major requirements and admission to Upper Division in Business and Economics. Approval of Instructor and DSIS Director of Undergraduate Studies.

**AN403G PRODUCTION AND INVENTORY SYSTEMS.**

(3)

This course is an advanced introduction to the complexities of managing production and inventory systems. An enterprise's success in today's highly-competitive, often-global business environment, depends on effectively managing its production activities and the related inventories at various production-process stages. Because such decisions are invariably tied to demand forecasts, the course begins with an examination of forecasting. Students are then led through the topics of production planning, master scheduling, material-requirements & manufacturing-resources planning, production activity control, capacity management, and sequencing & scheduling. The course culminates with coverage of contemporary trends toward just-in-time manufacturing systems and lean manufacturing systems. Applications of analogous systems and principles in the service sector are also addressed throughout the course. Prereq: Completion of all college pre-major requirements and admission to Upper Division or graduate student status in Business and Economics. Non-B&E Upper Division undergraduate students and graduate students may be enrolled with the consent of the instructor. (Same as MKT 403.)

**AN406G PRODUCTIVITY AND QUALITY MANAGEMENT.**

(3)

This course is an advanced treatment of two related concepts that are vital to the success of an enterprise: quality and productivity. As a key ingredient of competitive strategy, quality encompasses many attributes of a product or service—such as its design, its features, fit and finish, durability, safety, and customer treatment. In highly competitive settings, a firm that achieves and sustains high quality levels for its goods and/or services, while remaining at least as efficient as competitors in processes used to produce these outputs, tends to outperform its competitors. Beginning with an examination of connections between quality and productivity, this course examines their underlying philosophic, strategic, and human issues. The coverage includes emergent practices for continuous improvement including Kaizen, Six Sigma, customer relationship management, and strategic planning. Prereq: Completion of all college pre-major requirements and admission to Upper Division or Graduate Student status in Business and Economics. Non-B&E Upper Division undergraduate students and graduate students may be enrolled with the consent of the instructor. (Same as MKT 406.)

**AN420G DATA MINING.**

(3)

Data mining is concerned with tools and techniques to help a data/business analyst numerically and visually explore vast data sets, classify data, predict outcomes, or identify associations, patterns, and exceptional events. In practical terms, such capabilities allow firms to better segment markets, evaluate and classify stocks, identify prospective customers, foretell contingencies and catastrophes, identify defaulters and fraudulent transactions, measure churn, identify threats, perform service requests, bundle goods and services, recognize how events (e.g., purchases) are likely to unfold over time, and so on. Such capabilities often make the difference between survival and demise in today's increasingly global, increasingly competitive, and increasingly volatile business settings. Prereq: Completion of all college pre-major requirements and admission to Upper Division or graduate student status in Business and Economics. Non-B&E Upper Division undergraduate students and graduate students may be enrolled with the consent of the instructor. (Same as MKT 420.)

**\*AN440G TOPICS IN ANALYTICS.**

(3)

This course covers contemporary topics in enterprise data, analysis, and decision making. Past coverage has included Data Mining, Data Communications, and Valuation of Information. Non-B&E Upper Division undergraduate students and graduate students may be enrolled with the consent of the instructor. (Same as MKT 440.)

**AN450G ANALYTICS TECHNOLOGIES.**

(3)

This course develops computing skills relevant to the construction, maintenance, and usage of systems for analytics. Prior courses introduce students to analytical techniques commonly used in organizational decision making, as well as current information technologies. This course combines students' abilities in both areas within an advanced software context. Specifically, the course enhances students' abilities in developing computer-based systems that employ analytical techniques for the purpose of aiding organizational decision makers. Prereq: Senior standing or graduate student status in the College of Business and Economics. B&E undergraduate students must have completed 9 of the 18 credits required for an Analytics major. Non-B&E Upper Division undergraduate students and graduate students may be enrolled with the consent of the instructor.

**ANT102 ARCHAEOLOGY: MYSTERIES AND CONTROVERSIES. (3)**

Scientific archaeology has a problem: fringe ideas about mysteries of the past attract more interest than scholarly accounts of these same mysteries. In discussing the "mysterious" side of archaeology, this course asks why consideration of the past invites some of the most bizarre speculations about human life. Why do fringe theories about lost civilizations, intergalactic interactions, and mysterious technologies gain more popularity than mainstream theories? Why should serious archaeologists and students pay any attention to such "wacko" ideas? To answer these questions, this course attends to two kinds of controversies: fantastic claims in the past (such as the Myth of the Moundbuilders and the Shroud of Turin) and debates in the present (such as the cultural affiliation of Kennewick Man and uses of archaeology to promote discrimination).

**#ANT103 SPORTS, CULTURE, AND SOCIETY. (3)**

**ANT 245 FOOD CULTURE AND SOCIETY. (3)**

This course is designed for students in anthropology, food and nutrition, agriculture and environmental studies. It explores food in terms of human food systems. Human food systems include the knowledge, values, and practices used to produce, distribute, process, exchange and consume food. These are embedded in culture and operate within societies. Thus, why we eat, what we eat, when, where and with whom we eat, how and where we obtain our food, how we prepare it, and distribute it in specific ways may vary as a function of the culture in which we live, our place of residence and our location within society. We will explore these issues through the lectures, readings, videos and discussions to gain a better understanding of the complexity of food-related behaviors among people around the world.

**ANT 251 GLOBAL HEALTH: CULTURE, PATHOLOGIES AND SOCIAL INEQUALITIES. (3)**

What are the relationships between globalization, development, social justice and health? How do different global health interventions influence how people provide and seek out solutions to chronic and emergency health problems? This course explores contemporary global health issues from an anthropological perspective. Participants examine health effects of economic collapse, disasters and socio-political changes in industrialized and developing countries. We also study the growing global health industry from a social science perspective to evaluate the strengths and limitations of international aid, humanitarian interventions and NGOs for the wellbeing of individuals and communities. Topics include chronic and infectious diseases, environmental disasters, pharmaceuticals and the traffic in human organs. Course materials include texts from anthropology, mass media, documentaries, blogs and Twitter feeds. This course will be of interest to students in anthropology and the social sciences, International Studies, pre-med students and those who are interested in pursuing advanced degrees or professional careers in development and policy.

The purpose of this course is to acquaint the undergraduate student with the history of the development of anthropological ideas from their precursors in thought about human nature and behavior beginning with ethnographic and philosophical literature from Greek and Roman civilization, and ending with discussion of current emphases in anthropological theory. The course will provide anthropology majors with the foundations they need to master this area of disciplinary knowledge.

**ANT 303 TOPICS IN THE ANTHROPOLOGY OF FOOD AND NUTRITION: (Subtitle required). (3)**

This course focuses on food and nutrition through the lens of anthropology. Topics will vary, but each semester the course will provide insight into an aspect of food and nutrition that is relevant to present-day concerns in regional, national, and/or global context. Nutrition is one of the most critical health issues in the U.S. and globally as people struggle with both undernutrition and overnutrition and the long-term consequences of both to human well-being. At the same time, it is important to recognize that food is embedded in cultural, social and political-economic contexts that serve to foster and maintain cultural and social identity, and/or in which food is a commodity to be bought, sold and traded for economic profit and/or political gain.

**\*ANT 311 ANTHROPOLOGY OF GLOBALIZATION. (3)**

This course explores the ways in which differences in factors such as nationality, ethnicity, age, gender, class and occupation shape experiences of globalization. We will analyze and interpret rapidly changing patterns of global production, consumption, politics, resistance, adaptation, and identity construction around the world.

**#EPE 600 SOCIAL FOUNDATIONS TOPICS FOR SECONDARY EDUCATION. (1)**

This course is constructed to link reflective practitioner objectives of the MIC program to scholarly interests of "social foundations" faculty in the UK College of Education. The implicit objective of social foundations courses (e.g., Philosophy of Education, History of Education, Politics of Education, etc.) is to assist students in understanding the social nature of education in our society; to think critically and reflectively about education; and to recognize education as an area of inquiry in which systematic study can benefit practice. In the MIC version of this very abbreviated course, we will attempt to more explicitly link ideas and perspectives in course materials to the aims and interests of future reflective practitioners (you are they). Substantive origins and methodologies found in the "social foundations" course typically come from outside academic specialties like those enumerated above. That is, there are many academic historians and sociologists and political scientists and anthropologists, etc., who are quite interested in formal schooling as a social and cultural enterprise even though they do not work in schools themselves, nor are they interested in "improving" them. Prereq: Admission to the M.A. in Education - Secondary with Initial Certification Option.

**EPE 619 SURVEY RESEARCH METHODS IN EDUCATION (Subtitle required). (3)**

Survey research is one of the most common and useful methods for gathering data in educational research. Obtaining valid and reliable research results requires the administration of instruments that provide valid and reliable measures of the variables selected for observation. This course will focus on principles of measurement and procedures for developing a variety of survey instruments and for determining their validity and reliability. It is designed to teach students both how to improve the questions and design instruments. The theory and practice of survey research relies on contributions from disciplines such as psychology, sociology, statistics, and computer science. The purpose of this course is to familiarize participants with basic features of the design and implementation of surveys, and acquaint them with some principles and underlying theory from disciplines that have traditionally used surveys most heavily. The course will cover major stages of the survey process, including hypothesis and problem formulation, study design, sampling, questionnaire design, interviewing techniques, pretesting, modes of data collection, and data cleaning, management, and analysis. The course involves lectures, readings, and discussions. Students are encouraged to bring materials related to their own research interests. The course will provide an overview of the theoretical and experimental literature related to question and questionnaire design as well as focusing on practical issues in the design, critique, and interpretation of survey questions that are often not taught in formal courses. ## HSP Health, Society, and Populations

### #HSP255 MEDICINE, HEALTH, AND SOCIETY. (3)

HSP/SOC 255 is an introduction to foundational social theories and concepts through the lens of health, healing, and medicine. Social science perspectives on health disparities across populations, how health and disease are defined and managed, and cultural experiences of illness provide a window into a broader understanding of social life. The course will focus on four major social theories – social constructionism, symbolic interactionism, conflict theory, and functionalism. We will use these theoretical foundations and related core concepts to explore topics like physician-patient interaction and the social organization and distribution of health care. HSP/SOC 255 will also provide an introduction to social science research through critical analysis of original scholarly work and exposure to conducting, analyzing, and presenting one's own empirical findings. HSP/SOC 255 is ideal for those with career aspirations in medicine, nursing, or other health professions, and covers the sociology content included on the MCAT exam for pre-med students. This course also provides a critical foundation for those interested in learning about population health from the point of view of social science. Throughout the course, we will explicitly address the unique contributions of social science to a broader understanding of the etiology, treatment, experience, and consequences of illness and disease. (Same as SOC 255.)

### #HSP 355 SOCIOLOGY OF HEALTH AND ILLNESS. (3)

Who defines health and illness? Why is disease and premature death unequally distributed in society? What social forces cause individuals to get sick or stay healthy? How have changes in the medical profession, the health care system, and health policy affected treatment outcomes and illness experiences? This course addresses these questions through a presentation of important concepts and substantive issues the sociology of health and illness (or medical sociology), and an introduction to major classic and contemporary research in this area. We will compare and contrast sociological perspectives on health with the perspectives offered by biomedicine, psychiatry and allied disciplines. The course has two major sections: The first covers the social origins of illness – the social construction of illness and biomedical knowledge, social epidemiology, and social influences on personal experiences of illness. The second section covers social and institutional responses to illness and the impact of these on physician-patient interactions, health outcomes, and the distribution of disease. In this section we will examine the medical profession, the health care system, health policy, and the changing nature of these. Class sessions will emphasize group discussions and exercises based on original scholarly writings. Discussions and exercises are designed to encourage the development of analytic skills, recognition of the benefits of collaborative approaches to complex problems, and independent exploration of course material. (Same as SOC 355.)
